ANALYSIS PLAN FOR ENDLINE SURVEY

Graduating To Resilience in Kamwenge, Uganda
Pre-Analysis Plan
Aug 3, 2021

Principal researchers: Lasse Brune, Dean Karlan, Nathanael Goldberg, Doug Parkerson, Chris Udry

Implementing Partner: AVSI Foundation

Introduction
This document outlines the plan for analysis of the endline survey of the project "Graduating To Resilience in Kamwenge, Uganda." The analysis will mirror the analysis described in the pre-analysis plan for the midline survey, with a revised list of primary outcomes as described below.

Primary outcomes of interest:
- Consumption per capita ($)
- Food security index
- Value of productive assets ($)
- Household income ($)
- Subjective well-being index

Details on the construction of primary outcomes:

Consumption
- *Summary measure*: Value of 30-day consumption (=sum of outcomes below), divided by the household's adult-equivalents
- Adult equivalent scale: 1st adult = 1; 2nd-n adults = 0.7; children 0-14= 0.5
- Consumption components:
    - 7-day food consumption ($) multiplied by 4.3
    - 30-day non-food expenditure ($)
    - 12-month non-food expenditures ($) divided by 12
    - 10% of total value of household durables ($)

Food security
- *Summary measure*: z-score index of FCS, HFIAS and HAZ
- Individual outcomes:
    - Food Consumption Score (FCS) following INDDEX Project (2018), based on number of days in past 7 days household has consumed different major food categories

- Household Food Insecurity Access Scale (HFIAS) following Coates et al. (2007), based on eighteen questions about incidence and frequency of food security problems in past four weeks
- Household-average of height-for-age z-scores for children 0-59 months; for households without children in the relevant age-range we assign the mean of those who do (within experimental groups)

Productive asset ownership

- *Summary measure*: value of productive assets = sum of outcomes below ($)
- Individual outcomes:
    - Value of livestock ($)
    - Value of durable productive assets ($)
    - Value of fixed productive assets ($)
    - Value of business inventory (merchandise, unsold finished goods, raw materials, materials that have not been used, incomplete products) ($)

Household income:

- Summary measure: Total household income = sum of individual outcomes below ($)
    - Wages from employment ($)
    - Off-farm business profits ($), based on a direct question
    - Livestock profits, defined as
        - Sales net of expenses and animals purchases plus the average change in the value of animals
        - We compute the average change in the value of animals as the change in number of animals since the midline survey, divided by the number of months between midline and endline survey, multiplied by the average of the median prices per animal sold and bought, computed separately by animal type and summed across types
    - Net revenue from farming ($), defined as
        - The value of harvested crops in the last two completed agricultural seasons (as of the start of the endline) discounted by d as described below, plus the value of output from trees in the past 12 months (all divided by, for example, 12 months to get the average monthly value)
            - Discounting of crop value: we compute for the current season d sample average of (value of crops - expenses)/value of crops where value of crops is based on expected output and prices for the part of the sample that had not yet harvested. We then multiply the crop output from the completed season used in the sum above by d.

Subjective well-being

- *Summary measure*: z-score index of components
- Cantril's ladder (1-10)

- Kessler-6 score

Imputation of missing values

A number of survey questions were asked only of a random subsample, for budget reasons. Designing the instrument with “long” and “short” modules for many of the sections was done in expectation of using the information that is available for the observations that have “short modules” and combine it with the information available in the “long” modules to impute missing values, typically to construct aggregates where minor pieces of information are missing. For example, the long farming module asks for the value of output of all crops grown (as well which crops were the most important), while the short module asks for the value of output only for the most important crops for each farmer. Another example is the value of assets: the long module asks about quantity and value but the short module only asks about quantity. When we can impute unit prices and apply them to quantities, we impute the median price per unit from the long survey and apply it to quantities. Otherwise, we impute using predictions standard mean regressions. Regressions will include variables from the same section as the imputed variable as well as basic household demographics. We generally impute separately for host and refugee communities and within experimental groups.

Data collection and timing of analysis

While data collection was partially completed at the time of submission of this analysis plan, the researchers have generally been blind to the treatment status. An exception is the analysis of survey attrition which was conducted during data collection and included comparisons of attrition rates by treatment status for the purpose of management of potential differential attrition.

Pause of data collection

Data collection was interrupted at about the half-way mark due to work and travel restrictions related to the coronavirus pandemic. As of the posting of this document, data collection has been paused for over a month and the total pause in data collection --and indeed the resumption of data collection of the remainder of the sample-- remain uncertain. Our analysis might change as a reaction to this break. There are many possible scenarios that might render a deviation from this analysis plan reasonable or necessary. However, we cannot think through all possible decision trees; thus, modifications will be made based on the types of major changes we see in the data, if any. As one example for illustration: if the covid-related restrictions prevent the sale of livestock at significant rate, then it might make sense to exclude livestock revenue from the household income aggregate. Any such changes we will make as a result of the break in data collection will be described and justified in the paper.

consent	(Consent1) Introduction: Hello, my name is [enumerator]. I am working for Innovations for Poverty Action - a non-profit development research organization based in the US and Uganda. We contacted you around October 2018 to ask you questions about your household and we followed up several times since then. We are now contacting you again to follow up about your household's livelihood and wellbeing to better understand the welfare of people like yourself over time. This study covers approximately 11,000 households like yours in the Kamwenge area. Invitation to participate: We would like to invite you to participate in this survey. If you agree to participate, I will ask you questions about your household, for example your income sources and your wellbeing. In addition, we will ask you to measure height and weight of all children under 5 and women between 15 and 49 living in your household. Your participation is completely voluntary. You can refuse to answer the entire survey, stop the survey at any time by informing me that you wish to do so, or can tell us when a question makes you uncomfortable and we will skip that question. The survey will take approximately two hours to answer. All identifying information will be encrypted and will not be made public. Only the members of the research team will have access to them. We would also like to use the tablet computer to record our current location and make audio recordings of some of	

Field	Question	Answer
	your answers. This information will help us collect accurate information and may also be used to take into account respondents' cultural backgrounds. As with all information we collect, it will be used for research purposes only. The recordings are voluntary and are not a requirement of participation in this survey. We will not record them against your will, and you will be asked to confirm if you agree at the beginning of the survey. Risks: As with all research, there is a chance that confidentiality could be compromised; however, we are taking precautions to minimize this risk. Your participation in this study will be confidential and the answers you provide will be stored securely in electronic form. Your name and any other identifying information will only be accessible to the affiliated researchers and will never appear in any sort of report that might be published or shared with organizations who may be interested in the results. There are no other anticipated risks from your participation in the study. This study has been approved by an accredited Ugandan based Research Ethics Committee (MUREC). Benefits: You will receive a bar of soap as a token of appreciation for your participation. Apart from that, you will not receive any program or services just by participating in this study. However, the information you provide will be very valuable in understanding more about the people in this area. Withdrawal: You may withdraw from this study or skip any question at any time and without any explanation. There will be no consequences for deciding to withdraw or skip a question. You can use the contacts that we have provided you with to inform the research team that you would like to withdraw after the interview. There are no circumstances under which the research team will withdraw you from this study against your wishes. Questions & Concerns: Please ask us anything you want to know about this project now or later. If you have questions in the future regarding the research, please contact one of the members of our team: Matt Kato, Research Coordinator at IPA Uganda, Tel: 0705 061713. If you have questions about your rights as a research subject or regarding any damage attributable to the research and wish to discuss this with someone not involved in the study, you may contact the Mildmay Uganda Research Ethics Committee (MUREC) at 0392174236 or the Uganda National Council of Sciences and Technology (UNCST) at 0414705500. Sponsor: This research is funded by the United States Agency for International Development Office of Food for Peace, which aims to reduce hunger and malnutrition. Have you understood everything, and do you agree to participate in this survey? You can take 15 minutes to decide.

consent	(Consent1) Introduction: Hello, my name is [enumerator]. I am working for Innovations for Poverty Action - a non-profit development research organization based in the US and Uganda. We contacted you around October 2018 to ask you questions about your household and we followed up several times since then. We are now contacting you again to follow up	

Field	Question	Answer
	about your household's livelihood and wellbeing to better understand the welfare of people like yourself over time. This study covers approximately 11,000 households like yours in the Kamwenge area. Invitation to participate: We would like to invite you to participate in this survey. If you agree to participate, I will ask you questions about your household, for example your income sources and your wellbeing. In addition, we will ask you to measure height and weight of all children under 5 and women between 15 and 49 living in your household. Your participation is completely voluntary. You can refuse to answer the entire survey, stop the survey at any time by informing me that you wish to do so, or can tell us when a question makes you uncomfortable and we will skip that question. The survey will take approximately two hours to answer. All identifying information will be encrypted and will not be made public. Only the members of the research team will have access to them. We would also like to use the tablet computer to record our current location and make audio recordings of some of your answers. This information will help us collect accurate information and may also be used to take into account respondents' cultural backgrounds. As with all information we collect, it will be used for research purposes only. The recordings are voluntary and are not a requirement of participation in this survey. We will not record them against your will, and you will be asked to confirm if you agree at the beginning of the survey. Risks: As with all research, there is a chance that confidentiality could be compromised; however, we are taking precautions to minimize this risk. Your participation in this study will be confidential and the answers you provide will be stored securely in electronic form. Your name and any other identifying information will only be accessible to the affiliated researchers and will never appear in any sort of report that might be published or shared with organizations who may be interested in the results. There are no other anticipated risks from your participation in the study. This study has been approved by an accredited Ugandan based Research Ethics Committee (MUREC). Benefits: You will receive a bar of soap as a token of appreciation for your participation. Apart from that, you will not receive any program or services just by participating in this study. However, the information you provide will be very valuable in understanding more about the people in this area. Withdrawal: You may withdraw from this study or skip any question at any time and without any explanation. There will be no consequences for deciding to withdraw or skip a question. You can use the contacts that we have provided you with to inform the research team that you would like to withdraw after the interview. There are no circumstances under which the research team will withdraw you from this study against your wishes. Questions & Concerns: Please ask us anything you want to know about this project now or later. If you have questions in the future regarding the research, please contact one of the members of our team: Matt Kato, Research Coordinator at IPA Uganda, Tel: 0705 061713. If you have questions about your rights as a research subject or regarding any damage attributable to the research and wish to discuss this with someone not involved in the study, you may contact the Mildmay Uganda Research Ethics Committee (MUREC) at 0392174236 or the Uganda National Council of Sciences and Technology (UNCST) at 0414705500. Sponsor: This research is funded by the United States Agency for International Development Office of Food for Peace, which aims to reduce hunger and malnutrition. Have you understood everything, and do you agree to participate in this survey? You can take 15 minutes to decide.

Field	Question	Answer
generated_note_name_193	Please verify the information on all household members.	
hhmem_definition	(hh_definition) I would like to ask who the members of this household are. By that I mean all people, including children, who have been living and eating their meals together for at least six of the twelve months preceding the interview. Some people are considered as household members even though they have lived together for less than six of the past twelve months: - Infants who are less than 6-months-old - Newlyweds who have been living together for less than six months - Students and seasonal workers who have not been living as part of another household - Other persons living together for less than six months but who are expected to live in the household permanently (or for a total duration of at least six months) Servants, farm workers, and other such individuals who live and take meals with the household are household members even though they may not have blood or marital relationship with the household head. People who have lived in the household for more than six of the past twelve months but who have permanently left the household (for example, they died or got divorced) are not considered as household members. People who live in the same dwelling, but who do not share food expenses or eat meals together, are not members of the same household.
