# **Pre-analysis Plan for the Evaluation of the Technical and Vocational Vouchers Program (TVVP) and Start-up Capital for Youth (SCY) Program in Kenya**

## **Update for the 2016 Follow-up Round<sup>1</sup>**

**Investigators:** Joan Hamory Hicks, Michael Kremer, Isaac Mbiti, and Edward Miguel

**Date:** September 2017

**Summary:** This document outlines the plan for analyzing the impacts of the Technical and Vocational Vouchers Program (TVVP) and Start-up Capital for Youth (SCY) program in Kenya. The TVVP randomly allocated vouchers to support individuals through a vocational training course of their choice, and SCY subsequently randomly allocated cash grants to support the start-up or expansion of small businesses, among the same sample of individuals who were part of the TVVP. The near term impacts of these programs have been analyzed using earlier data collection rounds. This document describes the analysis we propose to undertake to study the longer-term impacts of these programs, updated for the latest round of data collection in 2016, which will allow us to analyze program impacts both alone and in combination with each other.

This document is an updated version of the previously registered pre-analysis plans for the TVVP and the first follow-up round of data collection for SCY, now incorporating plans for analysis of the recently completed second follow-up round. We describe our approach to analyzing the data obtained from the second follow-up before having accessed this data, incorporating insights we have gained and new hypotheses that have arisen from analysis of the first follow-up round and the development of a more extensive survey instrument for the second follow-up round. We anticipate carrying out some additional analyses beyond those included in this plan, so this plan is not meant to be comprehensive or to preclude additional analysis.

# 1 INTRODUCTION

## 1.1 SUMMARY

Youth unemployment is a critical economic and social issue in less developed countries at present. Vocational training and cash grant programs have been suggested as potential solutions to boost the livelihoods of underemployed youth in these regions: vocational training can enable youth to acquire marketable skills, and cash grants can help them to launch small businesses. However, existing research focused on the ability of such programs – especially in combination with each other – to improve youth outcomes is limited. The present document builds on earlier analysis of the initial impacts of the Start-up Capital for Youth (SCY) evaluation (registered with the American Economic Association RCT Registry in February 2015, and included here as Appendix A<sup>2</sup>) and the Technical and Vocational Vouchers Program (TVVP) evaluation (registered with the Abdul Latif Jameel Poverty Action Lab (J-PAL) Hypothesis Registry in December 2012, and included here as Appendix B) to measure the impacts of cash grants, both alone and in combination with vocational training, on labor market, entrepreneurship, and other life outcomes of nearly 2,200 Kenyan youth.

The TVVP is a randomized evaluation of a youth training intervention in Kenya. In 2008, participants of an ongoing longitudinal data collection effort known as the Kenya Life Panel Survey (KLPS) were invited by a local non-governmental organization (NGO) to apply to receive a voucher to cover the cost of vocational training.<sup>3</sup> 2,163 young adults between the ages of 18 and 30 submitted a valid application, and a randomly selected half of these individuals (1,055 applicants) were awarded a voucher while the other half served as the comparison group. Among voucher winners, a randomly selected half were awarded a voucher that could only be used in public vocational institutions (what we call the “restricted voucher”) and the other half were awarded a voucher that could be used in either public or private institutions (the “unrestricted voucher”). Furthermore, a random half of all TVVP introductory meetings included an additional intervention, namely, a presentation on the returns to vocational training, highlighting in particular the opportunity for women to learn traditionally male-dominated trades, which in many cases are more lucrative. We refer to this as the “information intervention”.

<sup>3</sup> The KLPS project, and the sample from which it was drawn, is described in more detail in Section 1.2.

Program take-up was high: 74% of TVVP voucher winners subsequently enrolled in training for varying lengths of time during 2009-2011 at any of 65 different public and private training institutions in rural and urban locations across Kenya. Data was collected from participating individuals and training institutions during the enrollment period, and near term follow-up data was collected from TVVP program applicants between August 2011 and August 2014, as part of the Kenya Life Panel Survey Round 3 (KLPS-3) data collection effort.

In 2013, the SCY program was launched utilizing this same sample of individuals, such that a randomly selected half of TVVP voucher winners and half of non-winners were awarded unconditional cash grants worth approximately US\$230 each. The KLPS-3 data collection round serves as a baseline for the SCY program. Upon enrollment in the program but prior to the receipt of the grant, grant winners were given pamphlets with tips on starting and running a small business, in an effort to encourage use of the grants for investment in entrepreneurship. In mid-2013, 482 (out of 510) grants were distributed to a representative half of program participants (following completion of the first wave of KLPS-3 data collection<sup>4</sup>), for a total uptake rate of 94.5% (4.1% of grant winners were lost to attrition, 0.8% refused participation, and 0.6% were deceased). Following completion of the second wave of KLPS-3 data collection in the fourth quarter of 2014, 410 (out of 440) grants were distributed to the other half of program participants, for a total uptake rate of 93.2% (3.4% of grant winners were lost to attrition, 0.5% refused participation, and 3.0% were deceased). Thus, the grant uptake rate was 93.9% across the two waves of grant distribution, and uptake was 99.3% among those individuals who were physically located and not deceased.

An overview of the timeline and primary survey instruments for the TVVP and SCY is provided in Figure 1 (below). The randomized cross-cutting design of these two potentially complementary programs will allow us to simultaneously estimate the impacts of vocational training, unconditional cash grants, and the combination of both interventions. In particular, some individuals were selected to receive both a voucher and a cash grant (N=464), others were selected to receive only one intervention (591 voucher only, and 486 grant only), and others received neither (622).

The use of randomization in treatment assignment circumvents concerns about selection bias and confounding factors in both evaluations. Furthermore, detailed longitudinal data from the KLPS

<sup>4</sup> KLPS-3 data collection was randomly divided into two waves, each representative of the whole, in part to allow for improvements in the survey instruments over time. SCY cash grants were distributed in two waves, following the completion of each wave of KLPS-3 data collection.

covering nearly 18 years is available on many program participants, which enables the exploration of heterogeneous treatment effects on different sub-populations in the sample. The panel data will also allow us to closely examine the dynamics and patterns of youth employment and entrepreneurship outcomes, and in particular to trace the labor market dynamics for youth, including the transitions from school to work, and the transitions from the informal sector to the formal sector.

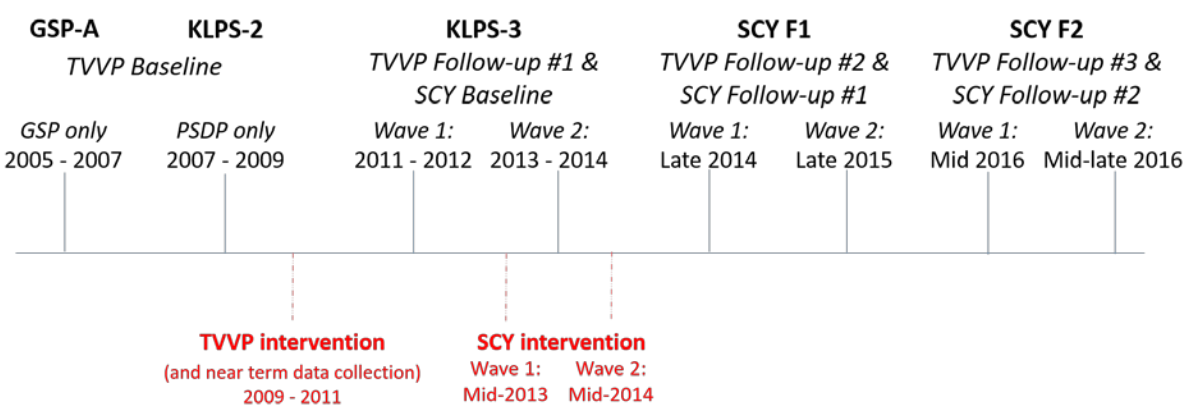

There exists a rapidly growing body of randomized evaluations of vocational training programs, with a number of such RCTs conducted in Africa (Bandiera *et al.*, 2014; Cho *et al.*, 2013; Banerjee *et al.* 2015; Blattman, Fiala, Martinez, 2014). This literature has called into question the efficacy of vocational training programs, at least as standalone interventions, in improving labor market outcomes – especially after weighing the costs and benefits of these programs (Blattman and Ralston, 2015). Cash transfer programs, on the other hand, have shown greater promise in alleviating credit constraints, increasing entrepreneurship and improving profits, at least in the near term and for particular groups (e.g., de Mel *et al.*, 2008, Fafchamps and Quinn, 2015). However, it remains to be seen whether these grant programs have lasting impacts, and whether they should be accompanied by skills augmentation or business training. Most existing studies either focus on cash only, or deliver a package (cash plus training) intervention that does not allow for analytical separation (Bandiera *et al.*, 2013; Banerjee *et al.*, 2015; Blattman *et al.*, 2014). To our knowledge, only one other experimental study explores the impacts of skills acquisition and cash grants on labor market outcomes both separately and in combination: Fiala (2014) studies a Ugandan program with 1,500 existing microenterprise owners, and detects some benefits of a combination skills-grants package beyond the effects of either intervention separately, at least in the near-term. Our project thus contributes to this growing literature by allowing to isolate the returns to training from the returns to capital and by analyzing the interaction of the two. Another key difference with these related papers is that the training studied there is generally provided by specially sourced trainers who are often specifically trained by the implementing organization to deliver a particular curriculum. In contrast, our program works with existing formalized vocational training schools. Our results are thus more generalizable and our approach more easily scalable. The relatively long 2-3 follow-up period, in the context of the rich 18 year KLPS longitudinal dataset, is also noteworthy.

## 1.2 DATA

The Kenya Life Panel Survey (KLPS) is a longitudinal data collection effort that seeks to collect educational, health, nutritional, demographic, labor market, and other information for more than 10,000 Kenyans. The KLPS sample is comprised of individuals who participated in one of two previous randomized NGO programs – one which provided merit scholarships to upper primary school girls in 2001 and 2002 (The Girls’ Scholarship Program, henceforth GSP; Kremer, Miguel, and Thornton, 2009), and one which provided deworming medication to upper and lower primary school students during 1998-2002 (the Primary School Deworming Project, henceforth PSDP; Miguel and Kremer, 2004).

To date, three rounds of KLPS data collection have been completed. The GSP and PSDP samples were first merged together for KLPS Round 3 (KLPS-3); KLPS-1 and KLPS-2 were collected only for participants of the deworming study, while an abbreviated survey similar to the KLPS-1 (known as the GSP-A) was conducted for the participants of the Girls’ Scholarship Program in between the first two KLPS rounds (see Figure 1). Thus, the KLPS-2 and GSP-A surveys serve as a baseline for the TVVP evaluation (at least in cases where the question asked in GSP-A is comparable to the one asked in KLPS-2), and the KLPS-3 survey round serves as a baseline for the SCY evaluation and as the near-term follow-up for the TVVP.

Figure 1. Timeline surveys

Note: KLPS-3 is for both GSP- and PSDP-participants. SCY F1 and SCY F2 are for participants of the TVVP-SCY study only (those from the PSDP- and GSP-sample who applied for the training vouchers).

The analysis proposed in this document will use the GSP-A, KLPS-2, KLPS-3, SCY F1, and SCY F2 survey rounds. All survey instruments can be found in the appendix (Appendices C through G), and the initial SCY pre-analysis plan, which detailed analysis to be conducted using the SCY F1-

Module only, is included for reference in Appendix A. It will be useful to refer to the survey instruments included in the appendices when we present variable definitions below.

### 1.3 ANALYSIS AND DATA EXAMINED TO DATE

Analysis of the short and medium term impacts of the TVVP, using data collected during the KLPS-3 and earlier, suggests that vocational training had limited impacts on total income and total hours worked 1 to 4 years after the intervention, although there is suggestive evidence for an impact on total income and total hours worked by 3 to 4 years after the intervention for female voucher winners. With regard to the SCY evaluation, the baseline (KLPS-3) data has been used to test for baseline imbalances across treatment (grant winner) and comparison (non-winner) groups, and none were found across gender, age, or previous program participation.

Moreover, we have used the data from the first SCY follow-up survey round (the SCY F1 Module) to determine the uses of grants and to obtain preliminary results for our main hypotheses (reported in Table A) as specified in the initial pre-analysis plan (Appendix A). The cash grant was mainly used to open up a business (by 39.6% of recipients), to invest in an existing business (16.8%) and to buy livestock (33.3%). Analysis of this initial follow-up data indicates that the cash grant substantially increased self-employment and profits, with the latter effect being particularly pronounced for female grant winners. Moreover, the grant had a negative effect on being a wage earner, and also on being unemployed. The cash grant induced recipients to increase their total hours worked, with more hours worked in agriculture and in self-employment and fewer hours worked in wage employment. These effects seem to matter for broader measures of living standards and wellbeing, as the number of meals eaten for grant winners increased, the perception of their own personal economic situation improved, and their happiness increased.

At the time of finalizing this plan, data collection for the SCY F2 Module – the second follow-up on the grant intervention, which will also allow us to study interaction effects with the voucher intervention – has been completed. The writers of this pre-analysis plan have not been given access to this data; it is being held by the field research assistants who oversaw data collection. No analysis has yet been conducted to estimate any program treatment effects using the data from the F2 Module before registering this plan. This document builds on the plans already specified in the 2015 pre-analysis plan for the SCY F1 survey, the 2012 pre-analysis plan for the vocational training

voucher evaluation, as well as additional hypotheses resulting from the development of a more detailed follow-up SCY F2 survey, and insights gained from preliminary analysis of the SCY F1-Module data.

## 1.4 ROADMAP

The remainder of this document lays out the regression specifications; the main research hypotheses regarding impacts on self-employment participation and profits (H1); the main research hypotheses regarding impacts on other earnings outcomes (H2); the main research hypotheses regarding impacts on other labor market and residential location outcomes (H3); the main research hypotheses regarding impacts on living standards and wellbeing (H4); and additional exploratory hypotheses for effects on other life outcomes and time use (H5). We separately identify five sets of research hypotheses in order to create natural groupings of outcomes.

The first set of hypotheses focus on entrepreneurship; although the cash grants were unconditional, the program was introduced to grant recipients with emphasis on starting or investing in a business (and we might expect a natural progression from many vocational training courses to self-employment as well), and so we are particularly interested in the extent to which the programs resulted in increased self-employment and higher profits. However, the unconditional grants could have been spent any number of ways, and we therefore expect them to potentially impact a range of other employment and life outcomes, which are specified in the other four sets of hypotheses. In what follows, we describe the main features of the planned analysis, including the use of mean effect indices (where applicable) and p-value adjustments that account for multiple testing.

As previously noted, this document captures our current thinking about the analysis of this data but we anticipate carrying out some additional analyses beyond those included in this plan, so this plan is not meant to be comprehensive nor to preclude additional analysis.<sup>5</sup>

## 2 METHODS

---

<sup>5</sup> Casey *et al.* (2012) discuss the advantages of allowing researchers to include additional analysis, in the context of pre-analysis plans.

## 2.1 EVALUATING SCY, THE TVVP, AND THEIR INTERACTION

Take-up of the cash grants was extremely high at 93.9%, and at 99.3% among those located and not deceased. This, coupled with the fact that the grants were unconditional and hence could have been spent any number of ways, suggests that we should estimate the impact of the SCY randomized intervention using a simple reduced-form econometric specification that includes an indicator variable for assignment to receive a grant. Results can be interpreted as an intention-to-treat (ITT) estimate of the grant impact. Similarly, for ease of interpretation, we will focus on the ITT estimate of the voucher program impact as well.<sup>6</sup>

In order to fully exploit the data collected as part of this unusual longitudinal data collection effort, we plan to present three different sets of analyses. First, we seek to make use of all of the data available to us by pooling across the various data collection rounds and performing (i) *pooled repeated cross-section analysis*. More specifically, we will use data for the full sample of participants from the KLPS-3, SCY F1, and SCY F2 survey rounds, where KLPS-3 serves as baseline for the cash grants (but the first follow-up for the vocational training vouchers), and SCY F1 and SCY F2 are both post grant intervention survey rounds. Note that some outcomes were only collected in a subset of these three data collection rounds, and for those outcomes analysis will be restricted to the rounds for which there is data (more detail on this below).

In addition to this pooled repeated cross-section analysis, we will also exploit the longitudinal nature of our data in *panel analysis*, including (ii) *fixed effects analysis* and (iii) *ANCOVA analysis*. These methods are attractive in that they may offer advantages in the form of statistical power and precision, but we face a tradeoff since we only have longitudinal data for a subset of the sample. In particular, we will make use of the full panel of KLPS-2, KLPS-3, SCY F1, and SCY F2 survey rounds for the sample of PSDP participants only, thus excluding GSP participants (who do not have information available that is generally comparable to the KLPS-2 round), to conduct fixed effects and ANCOVA estimation. We will show results from both estimation methods, since it is not clear which will offer higher statistical precision.

---

<sup>6</sup> For the voucher experiment, the treatment on the treated (TOT) estimate might differ from the intention-to-treat (ITT) effect because the experiment did not have perfect compliance: 26% of individuals offered a voucher did not take it up, and roughly 4% of individuals in the control group completed some vocational training. However, we will focus on the ITT results in our main analysis due to the relatively high take-up in the first stage, for comparability to the cash grant effects, and to ease interpretation of results.

### 2.1.1 POOLED REPEATED CROSS-SECTION ANALYSIS USING KLPS-3, SCY F1, AND SCY F2

In our first set of main analyses, we will estimate a pooled repeated cross-section using our full sample and making use of the KLPS-3, SCY F1, and SCY F2 survey rounds. This specification can be written as follows:

$$y_{it} = \sum_{t=1}^3 \delta_t + \alpha_1 G_{it} + \alpha_2 V_{it} + \alpha_3 I_{it} + X'_{it} \alpha_4 + \varepsilon_{1it} \quad (1)$$

where  $y_{it}$  is an outcome of interest (e.g., an indicator for self-employment) for individual  $i$  at time period  $t$ ,  $G_{it}$  denotes individual assignment to receive an unconditional cash grant,  $V_{it}$  denotes individual assignment to receive a vocational training voucher,  $I_{it}$  denotes assignment to receive the information intervention<sup>7</sup>, and  $\varepsilon_{1it}$  is the error term clustered at the individual level. Following Bruhn and McKenzie (2009),  $X_{it}$  is a vector which includes the characteristics used for stratification during the initial (voucher) randomization, namely: the individual's original project participation (in PSDP or GSP), their gender, and their baseline preferred training course. Course preference consists of six indicator variables for the major occupational groups, namely, (i) construction and related trades, (ii) textiles and tailoring, (iii) mechanics and driving, (iv) beauty, (v) computers/secretarial/business, and (vi) other. (As is standard, the "(vi) other" category indicator will be excluded from the regression to avoid collinearity problems.)  $X_{it}$  will also contain the following additional individual characteristics of interest:

- Age (at baseline in 2008)
- School attainment (at baseline)
- Indicator for any prior enrollment in vocational education (at baseline)
- Stated preference for a private (versus public) training institution (at baseline)
- Indicators for treatment status in the earlier PSDP and GSP programs
- Indicators for survey wave, and month of survey

We will analyze outcomes using this pooled repeated cross-section analysis wherever we have data for KLPS-3, SCY F1, and SCY F2, which is the case for most of the primary outcomes specified in Tables 1 to 4. Due to changes in the survey instrument over time (with some questions not asked in every survey round), data for some of the outcomes is only available for a subset of

---

<sup>7</sup> Since we did not find substantial impacts of the information intervention in analysis of previous data collection rounds, we do not expect to estimate sizeable impacts of this intervention in the proposed analysis. However, we include a term for the information intervention in estimation for completeness.

these follow-up survey rounds, and so KLPS-3 (and/or one of the SCY F rounds) will be excluded in analysis of those outcomes. More detailed information about missing data can be found in Tables 1 through 7. All available data will be used in this analysis, even if this results in slightly unbalanced samples across survey rounds.

Since we are interested in any complementarities between TVVP and SCY, we additionally can estimate this pooled repeated cross-section including interactions between the programs<sup>8</sup>:

$$y_{it} = \sum_{t=1}^3 \delta_t + \beta_1 G_{it} + \beta_2 V_{it} + \beta_3 I_{it} + \beta_4 (G_{it} \times V_{it}) + X'_{it} \beta_5 + \varepsilon_{2it} \quad (2)$$

### 2.1.2 PANEL ANALYSIS: FIXED EFFECT AND ANCOVA (FOR PSDP-PARTICIPANTS ONLY)

Since KLPS-2 (the data collection round that serves as a baseline to the vocational training intervention) was not collected for individuals who were originally part of the GSP sample, our fixed effect and ANCOVA analyses will focus on the sub-sample of former PSDP participants. These analyses may have somewhat less power than the pooled repeated cross-section analysis described above due to the decrease in sample size<sup>9</sup>, but the inclusion of individual fixed effects or baseline controls (ANCOVA) can improve statistical precision.

The fixed effect analysis is specified similarly to equations (1) and (2) above, with the addition of an individual fixed effect.

For the ANCOVA analysis, the specifications would be as follows:

$$y_{it} = \sum_{t=1}^3 \delta_t + \gamma_1 G_{it} + \gamma_2 V_{it} + \gamma_3 I_{it} + X'_{it} \gamma_4 + \theta y_{i, KLPS2} + \varepsilon_{3it} \quad (3)$$

For the analysis of the voucher and cash grants interventions together, we will use only the sample of PSDP participants, and KLPS-2 as baseline such that KLPS-3, SCY F1, and SCY F2 are all considered post-intervention periods.<sup>10</sup> The corresponding equation that estimates interactions between the TVVP and SCY would then be:

$$y_{it} = \sum_{t=1}^3 \delta_t + \pi_1 G_i + \pi_2 V_i + \pi_3 I_i + \pi_4 (V_i \times G_{it}) + X'_i \pi_5 + \theta y_{i, KLPS2} + \varepsilon_{4it} \quad (4)$$

---

<sup>8</sup> Following the footnote above, we exclude interactions between the information intervention and the other interventions in our main analyses in equation (2), in order to not complicate interpretation of results. We may include these interaction terms in separate analysis.

<sup>9</sup> In utilizing the KLPS-2 data, we will lose at least 34.07% of the sample (29.17% due to dropping GSP participants, 4.9% due to missing KLPS-2 data for PSDP-participants).

<sup>10</sup> We note that for any analysis which focuses on the SCY effect only, we could perform full sample (PSDP plus GSP) ANCOVA analysis using SCY F1 and F2 as post-intervention periods and the value of the outcome variable at baseline (KLPS-3) as a control. We will carry out this analysis as an additional robustness test.

All of these panel analyses will be unbalanced, in order to make use of all data available to us.

## 2.2 EVALUATING THE LONGER TERM IMPACTS OF THE TVVP

As previously noted, we registered a pre-analysis plan for the TVVP prior to analysis of the near-term KLPS-3 data; that plan was registered with J-PAL in 2012 and is included here as Appendix B. The SCY F2-Module provides a longer term follow-up for that program, and so we include details for that analysis here, drawing upon the previous plan.

The specifications detailed in equations (1) and (2) above lead to the reduced form estimation of the longer term impacts of the TVVP program. Equation (1) is similar to equation (6) in the original pre-analysis plan for the TVVP, although in the present specification we utilize the longitudinal structure of the data, include a control for the SCY program, and shift focus from the public/private vocational training impact to the impact of any training. One can imagine a similar estimation approach that does not include the panel element (and only makes use of the SCY F2 follow-up round), since we are additionally interested in the longer term impacts of the TVVP.

While the TVVP vouchers were assigned randomly, the individual decision to use the voucher and attend (or complete) school is a choice likely to be driven by unobservable individual characteristics. To estimate the returns to vocational training rather than simply voucher assignment, we can use a two-stage least squares (2SLS) instrumental variable approach, where the random voucher assignment serves as an instrument for vocational training. Since treatment and comparison group individuals were randomly chosen from the pool of those who applied for vocational education, there is no systematic reason why their labor market (or other) outcomes should differ, other than through the additional training enabled by the voucher. We can thus more confidently attribute labor market gains to vocational training.<sup>11</sup> Equation (5) presents the first stage

---

<sup>11</sup> Assignment to voucher treatment must satisfy several conditions to be a valid instrument for vocational training, including the exogeneity and the relevance of the instrument. “Exogeneity” is satisfied by the “successful” randomization of subjects into the treatment and comparison groups, in terms of balance along observable characteristics, which we demonstrate in earlier work (see Hicks *et al.*, 2011, Table 1). Regarding “relevance”, there are a number of compelling reasons to believe that a vocational education tuition voucher should increase enrollment. Most obviously, eliminating or dramatically reducing the cost of vocational education will increase demand through price effects. Subsidies may ease credit constraints that prevent enrollment or lead to dropout prior to completion; enable youth to enroll in higher quality institutions, including those that offer preparation for official certification exams (note that the payment of certification exam fees was typically covered by the TVVP program); and allow students to spend more time studying, rather than working to cover their tuition payments. Consistent with these expectations, Hicks *et al.* (2011) shows much higher vocational education enrollment among treatment youth (at 74% for treatment

regression of vocational education,  $VocEd_i$ , on assignment to receive a vocational training voucher and/or the information intervention, and Equation (6) specifies the second stage relationship between the outcome of interest  $y_i$  and vocational education. Here we do not exploit the panel element of the data:

$$VocEd_i = \gamma_0 + \gamma_1 V_i + \gamma_2 I_i + \gamma_3 (V_i \times I_i) + \gamma_4 G_i + X_i' \gamma_5 + \varepsilon_{5i} \quad (5)$$

$$y_i = \delta_0 + \delta_1 G_i + \delta_2 \widehat{VocEd}_i + X_i' \delta_3 + \varepsilon_{6i} \quad (6)$$

where all variables are as specified above, using the SCY F2 survey data. As specified in the TVVP pre-analysis plan registered previously (Appendix B to this document), the primary measure of vocational training completed (the endogenous variable in the IV-2SLS analysis) will be number of years (and fractions thereof) of vocational education attended. Focusing on the years of schooling completed is standard in Mincerian-style return to education studies in labor economics. An alternative take-up measure – e.g., indicator for any enrollment in vocational education – will be employed in robustness checks.<sup>12</sup>

## 2.3 HETEROGENEITY AND THE EVOLUTION OF EFFECTS OVER TIME

### 2.3.1 HETEROGENEITY

A key point of interest for policy makers is the distribution of program impacts in the population. Are grants best targeted at younger people or those who are older? Do women gain more when provided with additional subsidies, or do they experience lower returns? In order to answer these questions, we will estimate heterogeneous effects along the following ten main dimensions, including:

- Indicator for female
- Age (at baseline in 2008)<sup>13</sup>

---

vs. only 4% for comparison, in terms of attending at least some vocational training). At the time of data collection for that report, however, most students had not yet completed their courses so the first stage results as expressed using final vocational training attainment are likely to be somewhat different in the planned analysis.

<sup>12</sup> Presenting two endogenous variables immediately raises an exclusion restriction concern. The two measures are obviously closely related, and while we will emphasize the years of training measure, we plan to present both as alternative ways to “scale” the magnitude of the effect of receiving a vocational training voucher.

<sup>13</sup> Note that 2008 was the baseline for the TVVP, and a survey module known as the Registration (R) Module was administered to all TVVP applicants, which includes much of this baseline information.

- School attainment (at baseline)
- Indicator for enrolled in vocational training (by 2008 at baseline)
- English test score (for the subset of individuals with this information at KLPS-2 or GSP-A)
- Ravens Matrices test score (for the subset of individuals with this information at KLPS-2 or GSP-A)
- Indicator for urban residence (at baseline)
- Stated preference for a particular vocational training course/occupation (at baseline)
  - The primary occupation groups that we will focus on include: (i) construction and related trades, (ii) textiles and tailoring, (iii) mechanics and driving, (iv) beauty, (v) computers/secretarial/business, and (vi) other
- Indicators for participation and treatment status in the earlier PSDP and GSP programs
- Risk aversion at baseline (available for KLPS-2 and -3, not for GSP-A)

We will estimate heterogeneous treatment effects using interaction terms. When we consider the statistical significance of all of these main interactions jointly, we will employ a multiple testing approach, as discussed below.

In further exploratory analysis, we may additionally include controls for interactions with other measures of interest that vary within the panel, such as school attainment, enrollment in vocational training, residence in an urban area, marriage and fertility status, and industry of occupation.

We also intend to carry out additional analyses based on the nature of any heterogeneous treatment effects that we estimate. For instance, if we were to find significantly lower self-employment for females than males, say, it would be natural to explore if the particular life circumstances of females in our sample (e.g., their baseline marital status, or having young children at home) also have additional explanatory power. This would lead us to examine additional interaction effects, including potentially “triple interactions” in some cases. Some of the effects identified using a simple post-treatment estimation on the SCY F1 data are indeed most pronounced for women. Examples are effects on business profits, productivity and hours in self-employment, while an effect on increased farming is only significant for men. However, given the differences in sample size for women (1,241) and men (728) in SCY F1, some of the differences in statistical

significance might be driven by lower statistical precision for men, such that the nature of heterogeneous treatment effects is not yet fully apparent in the previous rounds. Since we do not yet know the full nature of heterogeneous treatment effects, and there are many possible constellations of results, it is not feasible to fully specify the nature of these additional exploratory analyses here, but we do note that we intend to carry out such analysis to better understand the nature of cash grant and vocational training impacts as well as the mechanisms behind some of the heterogeneous treatment effects we will find.

### 2.3.2 EVOLUTION OF EFFECTS OVER TIME

Finally, we note that with several follow-ups for SCY and the TVVP available, we are interested in the evolution of effects over time. For this purpose we can estimate equations (1) and (2), either including interactions between treatment status and survey round indicators (to formally test for significant differences between rounds) or running the post-treatment analysis for each outcome separately by survey round.

## 2.4 MULTIPLE TESTING ADJUSTMENT

For the main coefficient estimate of interest (for instance,  $\alpha_1$  in equation 1 above), we will present two sets of p-values. We will first present the standard “per comparison” p-values. These are appropriate for a researcher with an *a priori* interest in a specific outcome. For instance, researchers interested in the impact of cash grants on self-employment profits should focus directly on this p-value.

We will also present additional p-values that account for multiple testing. Since we test multiple hypotheses (for instance, for the related but distinct outcomes listed under the first hypothesis regarding self-employment participation and profits), it is appropriate to control for the possibility that some true null hypotheses will be falsely rejected.<sup>14</sup> Within appropriate groupings of outcomes, we plan to compute the False Discovery Rate (FDR) adjusted q-values (analogue to the standard p-value) that limit the expected proportion of rejections within a set of hypotheses that

---

<sup>14</sup> Following Anderson (2008) and the references cited therein.

are Type I errors. Specifically, we will follow the approach adopted in Casey *et al.* (2012), and the references cited therein. For main hypotheses 1 and 2 (H1 and H2), which have quite cohesive sets of outcomes, we will carry out multiple testing adjustments across each group of outcomes within each hypothesis and present the associated q-values (i.e., one adjustment for outcomes within H1, and a separate adjustment for outcomes within H2). For main hypotheses 3, 4, and 5 (H3, H4, and H5), we will carry out multiple testing adjustments within sub-families (i.e., within H3.1, and within H3.2, etc). For Table 7 which lays out the time use outcomes, we will carry out a multiple testing adjustment across the individual outcomes, as well as across indices.

We will additionally carry out a separate multiple testing adjustment across four outcome measures that we have identified as key outcomes for our overall analysis. These include one main outcome each per hypothesis for H1 through H4, namely: total non-agricultural self-employment profits in the last 12 months (from H1), total earnings in the last 12 months (H2), total hours worked (H3), and total meals eaten (H4). These key outcomes are denoted in Tables 1-4 below with bolded text.

## 2.5 OTHER ANALYSES

### 2.5.1 SELECTION INTO SELF-EMPLOYMENT

Because of the focus on entrepreneurship in the SCY program, we have a particular interest in the characteristics of those who entered self-employment. Non-random selection into self-employment creates difficulty in credibly assessing the productivity of self-employed workers relative to employed workers. The randomized prospective research design employed by this project provides us with a credible path to quantifying the extent to which non-experimental methods comparing self-employed and employed workers yield biased estimates. Using the results from the take-up of the start-up capital grant we can examine the characteristics of individuals who choose to utilize the grant and start their own businesses, including an analysis of the determinants of starting a registered (i.e., formal sector) business versus an informal business. The presence of high quality panel data from the KLPS will enable us to examine the role of cognitive test scores, risk tolerance, education (including vocational education), and socio-economic background in business formation.

### 2.5.2 GRANT SPENDING ANALYSES

We are also interested in a focused analysis of how the grant money provided through the SCY intervention was spent. For instance, did individuals use it to invest (in a business, their homes, or their training), or not? For those who used the grants to invest, what types of investments were made? For instance, were investments in businesses made in fields related to their training of interest? For this set of descriptive analyses, we will categorize types of spending into both broad and narrower categories.

## 3 OUTCOME VARIABLE CONSTRUCTION AND MAIN HYPOTHESES

### 3.1 OUTCOME VARIABLE CONSTRUCTION

Participants of the TVVP/SCY evaluation are young adults who were interested in vocational training and starting small businesses at the time of program application. Although the cash grants were unconditional, recipients were encouraged to use them to start a businesses or to improve upon an existing business through the scripts and printed materials presented at the time of program introduction. Hence, one set of key outcomes of interest relates to entrepreneurship (detailed under H1, below).

As the cash grants were unconditional, they could be spent any number of ways, such as on education or training, homestead improvements, or loan repayments. Furthermore, the expected career paths taken post-vocational training could also be quite divergent. Thus, we hypothesize impacts on a wide range of individual and household outcomes, detailed in H2, H3, H4, and H5 below.

There are natural subgroups within the groups of outcomes, which we will use to create indices in some cases, as noted below. If indices consist of only indicator variables, the score of the index will be the sum of the indicators divided by the number of components. When indices contain at least one continuous variable or a count variable taking more than 2 values, we will normalize each variable to be mean zero and unit variance, thereafter constructing the index by summing each component variable (the mean effects approach). We will exclude any variables with zero variance

as these do not contribute any information. These mean effects analyses are of course in addition to regressions for each of the individual outcomes.

Details on the construction of outcomes are included in Tables 1 to 7. These tables include the relevant question numbers from the SCY F2-Module that are being used for the construction of the outcomes. The “Category” column groups outcomes by topics and indicates the use of indices. The “Missing Data” column provides information on the survey rounds for which data on the specific outcome is not available, and thus implies which specification(s) we will employ for the specific outcome(s).

### 3.2 HYPOTHESIS 1 (H1): VOUCHERS AND GRANTS AFFECT SELF-EMPLOYMENT PARTICIPATION AND PROFITS

Under this first set of hypotheses, the analysis will focus on self-employment; in particular, an indicator for non-agricultural self-employment, self-employment profits (appropriately trimmed), and hourly self-employment profits. These will be full sample results, including those who are not in self-employment in the analysis with zero values. We will test the robustness of results for business profits by testing the effect on the log of business profits for those with non-zero business profits. The hourly profits measure combines an annual measure of earnings with a measure of hours worked over the last week, and is thus inherently more speculative. A more detailed description of all main outcomes for self-employment can be found in Table 1, while more exploratory outcomes around self-employment are defined below under H5 and can be found in Table 5. We will carry out two-sided hypothesis tests for these outcomes, and all outcomes in the hypotheses specified below.

### 3.3 HYPOTHESIS 2 (H2): VOUCHERS AND GRANTS AFFECT OTHER EARNINGS

Under Hypothesis 2, we focus on the impacts on other earnings, including total earnings, non-agricultural earnings, and farming profits. Again, we focus on full sample results to the extent possible, and make use of the same robustness checks as described under H1. All of the outcomes are described in more detail in Table 2.

### 3.4 HYPOTHESIS 3 (H3): VOUCHERS AND GRANTS AFFECT OTHER LABOR MARKET AND RESIDENTIAL LOCATION OUTCOMES

Under Hypothesis 3, we focus on the impacts on other labor market outcomes and residential location outcomes. In particular, we explore impacts on hours worked (both on the intensive and extensive margins), unemployment, sectoral participation, and farming practices.<sup>15</sup> We also explore impacts on migration. As before, we focus on full sample results to the extent possible.

### 3.5 HYPOTHESIS 4 (H4): VOUCHERS AND GRANTS AFFECT LIVING STANDARDS AND WELLBEING

Under Hypothesis 4, we group the effects on living standards and (emotional) wellbeing, to be explained in some more detail below. A detailed listing of outcomes can be found in Table 4.

#### 3.5.1 H4.1: VOUCHERS AND GRANTS AFFECT LIVING STANDARDS

We hypothesize that vouchers and cash grants affect welfare directly, or as a consequence of impacts on profits or earnings, employment, or training. The moderate time frame of the follow-up surveys are a limitation, as some welfare effects (such as asset accumulation and better health) might only emerge over time and certain behaviors may only evolve slowly.

Our most direct measure of living standards is consumption. During SCY F2, we obtained information on a subset of 23 major food items for the entire sample of respondents. We thus focus the consumption analysis using this round of data only.

The first outcome is a measure of “neediness” designed by Ligon (2015) as a measure of household living standards. In particular, the Ligon (2015) index is a measure of the marginal utility of expenditures (and thus welfare) that makes use of the fact that the composition of consumers’ consumption bundles vary with households’ welfare. For the purpose of constructing the “neediness” index, Ligon (2015) suggests collecting information on a subset of consumption items for which variation in expenditures is closely related to changes in marginal utility and thus

---

<sup>15</sup> Beyond this pre-specified analysis of sectoral shifts, we expect there to be some interesting results around occupational choice within sectors. We plan to carry out this analysis, but note that this analysis will be exploratory and is inherently difficult to pre-specify because of the large number of occupations.

welfare.<sup>16</sup> Given this relationship one can estimate the extent to which changes in welfare affect changes in expenditures on particular goods and thus use changes in expenditure for particular goods to infer changes in household welfare. The change in welfare resulting from additional expenditures in turn indicates “neediness” due to the concavity of the contemporaneous utility function for which utility is increasing in expenditures, but decreasingly so.

Secondly, we report the results for a more traditional measure of the total value of food consumption as measured by the 23 major food items. Using KLPS-3 data, where we asked about 153 items in detail for a smaller subset of 15% of respondents, we found that these 23 items make up 52% of total food consumption, and 26% of total household consumption, suggesting that they are a meaningful share of overall consumption. In additional analyses we will examine individual components of households’ consumption basket such as meat, protein or fruit consumption, as described in more detail in Table 5.

#### 3.5.2 H4.2: VOUCHERS AND GRANTS AFFECT EMOTIONAL WELLBEING

For some of the outcomes we will employ a summary index using a mean effects approach. This approach is often useful in aggregating across multiple distinct but related outcomes. The index is the equally-weighted average of the z-scores of the individual components, with scores normalized such that higher scores indicate more “beneficial” outcomes in the hypothesized direction of impact.<sup>17</sup> One example is the emotional wellbeing index with questions on increased feelings of happiness and anxiety, with answers ranging between 1 and 6. We also directly ask respondents whether they think they are better off than two years ago and whether they expect to be better off in two years, which we will use to examine the subjective perception of their economic situation.

---

<sup>16</sup> We shared data on the 153 items in the KLPS-3 with Prof. Ethan Ligon prior to the launch of SCY F2 surveying. Using the data on food consumption, he determined the elasticities of marginal utility with respect to expenditure for these 153 goods, of which we kept the following 23 items with the highest elasticities (among food items): Rice, Irish Potato, Wheat Flour, Plantains, Beans, Green grams, Tomatoes, Onions, Kale, Cabbage, Beef; Chicken, duck and other poultry; Eggs, Cooking fat, Sugar, Tea and Coffee; Breads, Biscuits, Cakes; Watermelon, Bananas, Oranges and other citrus fruits, Pineapple, Avocado and Mango.

<sup>17</sup> Kling *et al.* (2007) use this approach and Anderson (2008) uses a similar approach. While we will focus on the Kling *et al.* (2007) approach, as a robustness check we will also present mean effect results using Anderson’s (2008) approach, where the outcomes are weighted by the inverse of the variance-covariance matrix to “down-weight” outcomes that are correlated with one another.

## 4 EXPLORATORY HYPOTHESES (H5)

Beyond the four main groups of hypotheses, we will also estimate impacts on a number of additional outcomes for these groups of hypotheses, as well as on a number of other aspects of life quality such as health, marriage, fertility, and financial status, and also on attitudes, for example towards gender equality.

### 4.1 SELF-EMPLOYMENT

In addition to the main outcomes for self-employment (as defined above) we will, for example, estimate intervention impacts on the resale value of all business assets and individual components therein. Increased business assets for grant recipients would indicate business growth, potentially through investments made using the cash grants. Along these lines we will thus examine the grants' impact on investments, namely, whether business owners made new investments in the past twelve months, the type of investments made as well as the amount of investments made in order to start, purchase, or gain control of one's current business. Furthermore, one could imagine that the program had an effect on business closures, either reducing closures through capital injections or increasing them by making business owners close one business and open another, potentially more lucrative one.

In the SCY F2 we also included questions on respondents' business knowledge and skills, which we will use to form separate indices of business knowledge and skills and test. Impacts for all outcomes will be estimated separately for the listed outcomes and additionally as part of an index if noted accordingly.<sup>18</sup> All outcomes in H5 are listed in Table 5.

---

<sup>18</sup> Unless otherwise noted in the missing data column, outcomes will be measured using panel data which employs the KLPS-2 (Appendix D), KLPS-3 (Appendix E), SCY F1-Module (Appendix F) and SCY F2-Module (Appendix G) survey instruments. Question numbers from SCY F2 are referenced in the tables, and the corresponding questions from each survey round will be used (although the exact question numbers will vary across rounds). An "S" in the "PAP"-column indicates that the individual hypothesis was already contained in the initial pre-analysis plan for the SCY F-Module, a "T" signals that the pre-analysis plan for the TVVP already contained the respective hypothesis. "N" signals hypotheses newly introduced in this pre-analysis plan.

## 4.2 OTHER LIFE OUTCOMES

In addition to living standards and emotional wellbeing, we lay out several secondary outcomes ranging from: improved home characteristics and asset ownership; physical health (respondents' self-reported health, past and current diseases) and aspects of marriage, fertility and power within the household; children's health and school enrolment; and other dimensions of households' financial situation (transfers sent and received, as well as borrowing and lending behavior). All of these are supposed to capture different aspects of respondents' quality of life. As such the results for these will provide us with an interesting picture of a wide range of life outcomes. We do not have strong priors regarding the magnitude of impacts for most of these individual outcomes but consider them worth exploring.

Note that for none of these outcomes do we have complete information for all survey rounds. As a consequence, we will analyze these outcomes using whatever data is available for particular survey rounds, and in a post-treatment analysis only whenever data for KLPS-2 and KLPS-3 is completely missing.

## 4.3 ATTITUDES

In addition to the exploratory outcomes defined above, we will estimate effects on attitudes towards religion, ethnicity and gender equality as well as on trust, participation in politics and risk aversion. For indices of religious or ethnic attachment the individual outcomes will be coded in such a way that a value of 1 indicates decreased attachment. For some of these more exploratory outcomes listed in Tables 5 through 7, the "sign" of the cash grants' impact is not obvious *ex ante*. None of these outcomes were collected in the first SCY follow-up survey round so we use the second follow-up round throughout.

## 4.4 TIME USE

Finally, we will carry out analysis for respondents' time use on the day prior to the survey (as recalled in the survey) across all named activities, as well as for sub-groups of activities such as "at work" or

“academic activities”. The data on time use serves as a possible robustness or validation check for other reported outcomes, such as working hours in employment, self-employment, or agriculture, as mentioned above; since the time-use question specifically asks about respondents’ diary the day before the interview and this day might not be representative, this measure has obvious limitations. As the time-use section was not collected in KLPS-2 and SCY F1, and only for 15% of the KLPS-3 sample (those administered the more detailed E-Module) we will only estimate equation (4) for the whole sample using SCY F2.

*General Notes:* The “Question” column states which questions will be used to construct the respective outcomes, using question numbers from the SCY F2-Module; questions for earlier survey round modules are omitted for brevity. In the “PAP” column, “S” stands for hypotheses already contained in the Pre-Analysis Plan for SCY F1, “T” indicates the Pre-Analysis Plan for TVVP, and “N” signals that the hypothesis is new - although the timeframe on the question may differ from an earlier PAP. The entries in the “Missing Data” column refer to the survey rounds for which the relevant questions are missing. KLPS-3 (E) means that for KLPS-3 data is only available for the 15% of the sample who were administered the E-Module. A sorting by topics can be found under “Category”; if outcomes are used to construct an index this will be noted in the same column.

If not otherwise noted, the regressions are run for the whole sample. We always conduct unbalanced panel and post-treatment analyses unless we only have data post-treatment survey rounds, in which case we only report the post-treatment estimator.

For indices we estimate either mean effects or a simple sum of individual outcomes. If indices consist of only indicator variables, the score of the index will be the sum of the indicators. When indices contain at least one continuous variable or a count variable taking more than 2 values, we will normalize each variable to be mean zero and unit variance, thereafter constructing the index by summing each component variable (the mean effects approach). We will exclude any variables with zero variances as these do not contribute any information. Analyses of indices are of course in addition to regressions for each of the outcomes.

*Other Notes:* <sup>1</sup>We will also provide results focusing on the most recent month only (and hence not using any recall data) for completeness, but we prefer the results over the last 12 months, which utilize more of the data available to us. <sup>2</sup>We will additionally provide untrimmed results, but prefer the conservative 1% trimming we specify here. Trimming will always be done after summing profits across all businesses. <sup>3</sup>Full sample indicates replacing with 0 if not in non-ag self-employment. <sup>4</sup>Data is available for any current businesses, but no data was collected on former businesses that may have been open in the last 12 months.

Indicator for residence outside Kenya, current and since previous survey round	3.1, 9.1 9.2.3	S, T	using SCY F2)
Number of moves, since previous survey round	9.1 9.2.3	N	

*Notes:* See General Notes for Table 1. <sup>1</sup>Full sample indicates replacing with 0 if does not participate in that sector. <sup>2</sup>We will also provide results focusing on the most recent month only (and hence not using any recall data) for completeness, but we prefer the results over the last 12 months, which utilize more of the data available to us. For compensation, earnings, and profit measures, we will additionally provide untrimmed results, but prefer the conservative 1% trimming we specify here. Trimming will always be done after summing across all positions/businesses. <sup>3</sup>Wage employment benefits include the sum of payments in food, NSSF/health insurance, housing benefits, uniforms/clothing benefits, training allowance, and other allowances and benefits. We will additionally check salary (not including benefits) results for completeness. <sup>4</sup>Wage employment may include wage employment in agriculture, but agricultural self-employment will always be included in the agricultural sector. <sup>5</sup>City is defined as in Hicks et al. (2017). We will also look separately at Nairobi in Kenya and other large cities with at least 1 million population in other countries.

### **Pre-analysis Plan for the Evaluation of the Start-up Capital for Youth (SCY) Program in Kenya<sup>1</sup>**

**Investigators:** Joan Hamory Hicks, Michael Kremer, Isaac Mbiti, and Edward Miguel

**Date:** February 2015

**Summary:** This document outlines the plan for analyzing the impact of the Start-up Capital for Youth (SCY) program – a randomized evaluation of an unconditional cash grant program in Kenya – including regression specifications and outcome variable definitions. This project is an extension of the Technical and Vocational Vouchers Program (TVVP), a randomized evaluation of a youth training intervention in Kenya. We will analyze the impact of SCY both alone and in combination with TVVP, and also discuss analysis of the longer run impacts of the TVVP. As we describe in this plan, there will be two rounds of follow-up data collected as part of the SCY evaluation. We intend to register an updated version of this pre-analysis plan after we have analyzed data from the first follow-up round but before we have accessed the data from the second follow-up round, in order to incorporate any new hypotheses that may arise based on findings from the first round. We further note that we anticipate carrying out some additional analyses beyond those included in this plan, so this plan is not meant to be comprehensive or to preclude additional analysis.

# 1 INTRODUCTION

## 1.1 SUMMARY

Youth unemployment is a critical economic and social issue in less developed countries at present. Vocational training and cash grant programs have been suggested as potential solutions to boost the livelihoods of underemployed youth in these regions. Technical and vocational training can enable youth to acquire marketable skills, and cash grants can help them to launch small businesses. However, existing research focused on the ability of such programs – especially in combination with each other – to improve youth outcomes is limited. The Start-up Capital for Youth (SCY) evaluation builds on the Technical and Vocational Vouchers Program (TVVP) evaluation (registered with the Jameel Poverty Action Lab (J-PAL) Hypothesis Registry in December 2012, and included here as Appendix D) to measure the impacts of cash grants, both alone and in combination with vocational training, on the labor market and entrepreneurship outcomes of nearly 2,200 Kenyan youth.

The TVVP is a randomized evaluation of a youth training intervention in Kenya. In 2008, participants of an ongoing longitudinal data collection effort known as the Kenyan Life Panel Survey (KLPS) were invited by a local non-governmental organization to apply to receive a voucher to cover the cost of vocational training.<sup>2</sup> 2,163 young adults between the ages of 18 and 30 submitted an application, and a randomly selected half of applicants (1,055 individuals) were awarded a voucher while the other half served as the comparison group. Among voucher winners, a randomly selected half were awarded a voucher that could only be used in public vocational institutions (what we call the “restricted voucher”) and the other half were awarded a voucher that could be used in either public or private institutions (the “unrestricted voucher”). Furthermore, a random half of all TVVP

---

<sup>2</sup> The KLPS project, and the sample from which it was drawn, is described in more detail in Section 1.2, below.

introductory meetings included an additional intervention – a presentation on the returns to vocational training, highlighting in particular the opportunity for women to learn traditionally male-dominated trades, which in many cases are more lucrative. We refer to this as the “information intervention”.

TVVP voucher winners subsequently enrolled in training for varying lengths of time during 2009-2011 at any of 65 different public and private training institutions in rural and urban locations across Kenya. Data was collected from participating individuals and training institutions during the enrollment period, and near term follow-up data was collected from TVVP program applicants between August 2011 and August 2014, as part of the Kenya Life Panel Survey Round 3 (KLPS-3) data collection effort.

In 2013, the SCY program was launched utilizing this same sample of individuals, such that a randomly selected half of TVVP voucher winners and half of non-winners were awarded unconditional cash grants worth approximately US\$230 each. The KLPS-3 data collection round serves as a baseline for the SCY program. Upon enrollment in the program but prior to the receipt of the grant, grant winners were given pamphlets with tips on starting and running a business, in an effort to encourage use of the grants for investment in entrepreneurship. 482 (out of 510) grants were distributed in mid-2013 to a representative half of program participants (following completion of the first wave of KLPS-3 data collection<sup>3</sup>), for a total uptake rate of 94.5% (4.1% of grant winners were lost to attrition, 0.8% refused participation, and 0.6% were deceased). 410 (out of 440) grants were distributed to the other half of program participants in the fourth quarter of 2014 (following

---

<sup>3</sup> KLPS-3 data collection was randomly divided into two waves, each representative of the whole, in part to allow for improvements in the survey instruments over time.

completion of the second wave of KLPS-3 data collection), for a total uptake rate of 93.2% (3.4% of grant winners were lost to attrition, 0.5% refused participation, and 3.0% were deceased). Thus, across the two waves of grant distribution, the uptake rate was 93.9% (and among those individuals who were physically located and not deceased, uptake was 99.3%).

The randomized cross-cutting design of these two potentially complementary programs (the TVVP and SCY) will allow us to simultaneously estimate the impacts of vocational training, unconditional cash grants, and the combination of both interventions. In particular, some individuals were selected to receive both a voucher and a cash grant (464), others were selected to receive only one award (591 voucher only, and 486 grant only), and others received none (622).

The use of randomization in treatment assignment circumvents concerns about selection bias and confounding factors in both evaluations. Furthermore, detailed longitudinal data from the KLPS covering nearly 15 years is available on all program participants, which will enable the exploration of heterogeneous treatment effects on different sub-populations in the sample. The panel data will also allow us to closely examine the dynamics and patterns of youth employment and entrepreneurship outcomes, and in particular to trace the labor market dynamics for youth, including the transitions from school to work, and the transitions from the informal sector to the formal sector.

There have been only a small number of vocational training RCTs conducted in Africa (Bandiera *et al.*, 2014; Cho *et al.*, 2013), and research on the efficacy of and complementarities between skills enrichment and credit constraint relief is even more limited. The closest research we are aware of in Sub-Saharan Africa is a recent RCT by Blattman *et al.* (2014), which finds that a program providing cash grants to Ugandan youth groups to fund businesses and/or training had large economic

returns. However, it is difficult to isolate the returns to training from the returns to capital in this latter program. Another key difference with these related papers is that the training studied there is generally provided by specially sourced trainers who are often specifically trained by the implementing organization to deliver a particular curriculum. In contrast, our program works with existing formalized vocational training schools. Thus our results are more generalizable and our approach is easily scalable as it relies on the existing vocational education infrastructure.

## 1.2 DATA

The Kenya Life Panel Survey (KLPS) is a longitudinal data collect effort that contains educational, health, nutritional, demographic, labor market, and other information for nearly 10,000 Kenyan youth. The KLPS is comprised of individuals who participated in one of two previous randomized NGO programs – one which provided merit scholarships to upper primary school girls in 2001 and 2002 (Kremer, Miguel, and Thornton, 2009), and one which provided deworming medication to primary school students during 1998-2002 (Miguel and Kremer, 2004). To date, three rounds of KLPS data collection have been completed. The KLPS-2 survey serves as a baseline for the TVVP evaluation, and the KLPS-3 survey round serves as a baseline for the SCY evaluation and as the near-term follow-up for the TVVP; the KLPS-2 survey instruments are included as Appendix A, and the KLPS-3 survey instruments are included as Appendix B.

The SCY evaluation will use these earlier KLPS rounds, and also employ data from two follow-up rounds of data collection: a follow-up survey (the SCY F-Module) administered approximately a year after grant distribution, and the KLPS-4 survey round which will be collected during 2015-2016. The Wave 1 SCY F-Module is included as Appendix C. It will be useful to refer to the survey instruments included in the appendices when we present variable definitions below, and we will update this pre-

analysis plan once the Wave 2 SCY F-Module and KLPS-4 modules have been finalized. We note that these two follow-up rounds can additionally be used to study the longer term impacts of the TVVP, and we include plans for such analysis in this plan as well.

Additional data were collected for SCY grant winners prior to grant distribution, namely a short survey (the SCY R-Module) to register them to receive the grant and to collect some prospective information on how they might want to use it. In addition, focus groups interviews were conducted on approximately 15 pilot and main sample grant winners nearly a year after grant distribution in order to discuss what they did with the grants, and their opinions on the program.

### 1.3 ANALYSIS AND DATA EXAMINED TO DATE

Analysis of the TVVP evaluation using data collected during KLPS-3 and earlier is already underway, although we will not detail those analyses here (a pre-analysis plan for that project was registered with the J-PAL Hypothesis Registry in December 2012, and is included in this document as Appendix D). With regard to the SCY evaluation, the baseline (KLPS-3) data has been used to test for baseline imbalances across treatment (grant winner) and control (non-winner) groups in the Wave 1 sample (none were found across gender, age, or previous program participation). We have also used the Wave 1 SCY R-module data (collected for grant winners prior to grant distribution) in order to summarize occupations of grant winners and their intended uses for the grants at baseline. A collaborator on this project, anthropologist Salome Wawire, has summarized the qualitative information collected through the focus group interviews with approximately 15 pilot and main sample grant winners from Wave 1, and we have used the information she gathered to guide survey design.

At the time of finalizing this plan, data collection for the Wave 1 SCY F-Module has just been completed. We have not yet been given access to this data, and thus have not examined or estimated any program treatment effects before registering this plan.

We intend to register an additional pre-analysis plan before analyzing the KLPS-4 data (the second-round follow-up), but after analyzing the SCY F-Module data (the first round follow-up). We anticipate that the analysis of the F-Module data, using the specifications laid out in this pre-analysis plan and any other tests, will generate a set of additional hypotheses that can then be tested on the KLPS-4 data. For instance, findings of large effects (or non-effects) among particular subgroups may raise questions about the mechanisms underlying those effects (or non-effects), which additional tests may help to address. We plan to describe these additional hypothesis tests in detail in the future pre-analysis plan.

## 1.4 ROADMAP

The remainder of this document lays out the regression specifications; the main research hypotheses regarding impacts on self-employment and profits (H1); the main research hypotheses regarding impacts on other entrepreneurship and labor market outcomes, and migration (H2); the main research hypotheses regarding impacts on living standards and wellbeing (H3); and exploratory hypotheses (H4). We separately identify three sets of main research hypotheses in order to create natural groupings of outcomes. The first set of hypotheses focus on entrepreneurship; although the grants were unconditional, the program was introduced to grant recipients with great emphasis on starting or investing in a business, and so we are particularly interested in the extent to which the program resulted in increased self-employment and higher profits. However, the unconditional grants could have been spent any number of ways, and we

therefore expect them to impact a range of other employment and life outcomes, which are specified in the other two sets hypotheses. In what follows, we describe the main features of the analysis to be performed, including the use of mean effect indices (where applicable) and p-value adjustments that account for multiple testing.

As noted above, this document captures our current thinking about analysis with this data but we anticipate carrying out some additional analyses beyond those included in this plan, so this plan is not meant to be comprehensive nor to preclude additional analysis.<sup>4</sup>

## 2 METHODS

### 2.1 EVALUATING SCY AND ITS INTERACTION WITH TVVP

Take-up of the cash grants was extremely high, at 93.9% across the two distribution waves (and at 99.3% among those located and not deceased). Because grants were unconditional, and hence could have been spent any number of ways, we will estimate the impact of the SCY randomized intervention using a simple reduced-form econometric specification that includes an indicator variable for assignment to receive a grant. Results can be interpreted as an intention-to-treat (ITT) estimate of the grant impact.

We can analyze the panel data using both individual fixed effects specifications as well as random effects specifications. Since treatment is randomly assigned both specifications will deliver the consistent estimates of the causal impact of the program. We write the specification as follows:

---

<sup>4</sup> Casey *et al.* (2012) discusses the advantages of allowing researchers to include additional analysis, in the context of pre-analysis plans.

$$y_{it} = \alpha_0 + \alpha_1 G_{it} + \alpha_2 V_{it} + \alpha_3 I_{it} + X'_{it} \alpha_4 + \mu_{1i} + \varepsilon_{1it} \quad (1)$$

where  $y_{it}$  is the outcome of interest (e.g., an indicator for self-employment) for individual  $i$  at time period  $t$ , and  $G_{it}$  denotes individual assignment to receive an unconditional cash grant. Since individuals in the SCY program were also participants in the TVVP, we additionally want to include measures from that earlier randomized program in our analysis. In this simple specification, we include  $V_{it}$ , an indicator for assignment to receive a vocational training voucher, and  $I_{it}$ , assignment to receive the information intervention.  $X_{it}$  is a vector of time-varying individual controls, as defined in section 2.3 below (and includes non-time varying individual-level controls when the panel element is not being analyzed, as detailed below).  $\mu_{1i}$  can reflect a fixed effect or a random effect.

This panel specification will utilize four rounds of survey data, including the KLPS-2, KLPS-3, SCY F-Module, and KLPS-4. As previously explained, the KLPS-2 serves as a baseline to both programs, the KLPS-3 is a near-term follow-up for the TVVP and a baseline for SCY, and the SCY F-Module and KLPS-4 are follow-ups to both programs. We will consider a wide range of outcomes, including self-employment, hours worked, business earnings and profits, participation in the formal or informal sector, and migration.

Since we are interested in any complementarities between TVVP and SCY, we additionally can estimate this model including interactions between the programs:

$$y_{it} = \beta_0 + \beta_1 G_{it} + \beta_2 V_{it} + \beta_3 I_{it} + \beta_4 (G_{it} \times V_{it}) + \beta_5 (G_{it} \times I_{it}) + \beta_6 (V_{it} \times I_{it}) + X'_{it} \beta_7 + \mu_{2i} + \varepsilon_{2it} \quad (2)$$

Because not all individuals were surveyed in every data collection round (i.e., there was some survey attrition), we will further estimate a model similar to (1) and (2) without the panel structure – i.e., focusing on the cross-sectional analysis for a given follow-up round. This is additionally attractive

because a small number of outcomes (noted below in the exploratory hypothesis definitions below) were collected only in the SCY F-module, and we will not have baseline information on them. For instance, in the SCY F-module, we inquire about investments in the homestead that were made following the month of grant distribution (in previous KLPS rounds we ask about homestead investments, but in a different fashion). Thus, the model would be:

$$y_i = \pi_0 + \pi_1 G_i + \pi_2 V_i + \pi_3 I_i + W_i' \pi_4 + \varepsilon_{3i} \quad (3)$$

where the outcome  $y_i$  is defined at the time of follow-up data collection, and  $W_i$  is a vector of characteristics including those used for stratification during the randomization (gender, baseline participation in the PSDP or GSP and assignment to treatment group in that program, assignment to TVVP voucher and information intervention groups, and survey wave) as well as some additional controls of interest (specified in section 2.3 below). As before, we can further include interactions between the programs to explore complementarities.

Finally, we can estimate a version of (3), in which we stack the cross-sectional estimates and cluster the disturbances by individual. Ultimately, we will select the model from these alternatives that has the most statistical precision.

## 2.2 EVALUATING THE LONGER TERM IMPACTS OF THE TVVP

As previously noted, we registered a pre-analysis plan for the TVVP prior to analysis of the near-term KLPS-3 data; that plan was registered with J-PAL in 2012 and is included here as Appendix D. The SCY F-Module and KLPS-4 rounds of data collection provide a longer term follow-up for that program, and so we include details for that analysis here, drawing upon the previous plan.

The specification detailed in equations (1) and (2) above allow for a reduced form estimation of the longer term impacts of the TVVP program. Equation (1) is similar to equation (6) in the original pre-analysis plan for the TVVP, although in the present specification we utilize the panel structure of the data, include a control for the SCY program, and shift focus from the public/private vocational training impact to the impact of any training. One can imagine a similar estimation that does not include the panel element, since in this analysis we are focused on the longer term impacts of the TVVP, and not the interaction between the TVVP and SCY.

While the TVVP vouchers were assigned randomly, the individual decision to use the voucher and attend (or complete) school is a choice likely to be driven by unobservable individual characteristics. To estimate the returns to vocational training rather than simply voucher assignment, we can use a two-stage least squares (2SLS) instrumental variable approach, where the random voucher assignment serves as an instrument for vocational training. Since treatment and comparison group individuals were randomly chosen from the pool of those who applied for vocational education, there is no systematic reason why their labor market (or other) outcomes should differ, other than through the additional training enabled by the voucher. We can thus more confidently attribute labor market gains to vocational training.<sup>5</sup> Equation (4) presents the first stage regression of

---

<sup>5</sup> Assignment to voucher treatment must satisfy several conditions to be a valid instrument for vocational training, including the exogeneity and the relevance of the instrument. “Exogeneity” is satisfied by the “successful” randomization of subjects into the treatment and control groups, in terms of balance along observable characteristics, which we demonstrate in earlier work (see Hicks *et al.*, 2011, Table 1). Regarding “relevance”, there are a number of compelling reasons to believe that a vocational education tuition voucher should increase enrollment. Most obviously, eliminating or dramatically reducing the cost of vocational education will increase demand through price effects. Subsidies may ease credit constraints that prevent enrollment or lead to dropout prior to completion; enable youth to enroll in higher quality institutions, including those that offer preparation for official certification exams (note that the payment of certification exam fees was typically covered by the TVVP program); and allow students to spend more time studying, rather than working to cover their tuition payments. Consistent with these expectations, Hicks *et al.* (2011) shows much higher vocational education enrollment among treatment youth (at 74% for treatment vs. only 4% for control, in terms of attending at least some vocational training). At the time of data collection for that report, however, most students had not yet completed their courses so the first stage results as expressed using final vocational training attainment are likely to be somewhat different.

vocational education,  $VocEd_i$ , on assignment to receive a vocational training voucher and/or the information intervention, and Equation (5) specifies the second stage relationship between the outcome of interest  $y_i$  and vocational education. Here we do not exploit the panel element of the data:

$$VocEd_i = \gamma_0 + \gamma_1 V_i + \gamma_2 I_i + \gamma_3 (V_i \times I_i) + \gamma_4 G_i + X_i' \gamma_5 + \varepsilon_{4i} \quad (4)$$

$$y_i = \delta_0 + \delta_1 G_i + \delta_2 \widehat{VocEd}_i + X_i' \delta_3 + \varepsilon_{5i} \quad (5)$$

As specified in the TVVP pre-analysis plan registered previously (Appendix D to this document), the primary measure of vocational training completed (the endogenous variable in the IV-2SLS analysis) will be number of years (and fractions thereof) of vocational education attended. Focusing on the years of schooling completed is standard in Mincerian-style return to education studies in labor economics. An alternative take-up measure – e.g., indicators for any enrollment in vocational education – will be employed in robustness checks.<sup>6</sup>

## 2.3 HETEROGENEOUS TREATMENT EFFECTS

A key point of interest for policy makers is the distribution of program impacts in the population. Are grants best targeted at younger people or those who are older? Should women be provided with additional subsidies, or do they experience lower returns? In order to answer these questions, we will estimate heterogeneous effects along nine dimensions, including:

- Indicator for female
- Age (in 2008)<sup>7</sup>

---

<sup>6</sup> Presenting two endogenous variables immediately raises an exclusion restriction concern. The two measures are obviously closely related, and while we will emphasize the years of training measure, we plan to present both.

<sup>7</sup> Note that 2008 was baseline for the TVVP.

- School attainment (by 2008)
- Indicator for enrolled in vocational training (by 2008)
- English test score (for the subset of individuals with this information at KLPS-2)
- Raven’s test score (for the subset of individuals with this information at KLPS-2)
- Indicator for urban residence (2008)
- Stated preference for vocational training course/occupation (at TVVP baseline in 2008)
  - The primary occupation groups that we will focus on include: (i) construction and related trades, (ii) textiles and tailoring, (iii) mechanics and driving, (iv) beauty, (v) computers/secretarial/business, and (vi) other
- Indicators for participation and treatment status in the earlier PSDP and GSP programs

We will estimate heterogeneous treatment effects using interaction terms. In further analysis, we may additionally include controls for and interactions with other measures of interest that vary within the panel, such as school attainment, enrollment in vocational training, residence in an urban area, marriage and fertility status, and industry of occupation.

We also intend to carry out additional analyses based on the nature of any heterogeneous treatment effects that we estimate. For instance, if we were to find significantly lower self-employment for females than males, say, it would be natural to explore if the particular life circumstances of females in our sample (e.g., their baseline marital status, or having young children at home) also have additional explanatory power. This would lead us to examine additional interaction effects, including potentially “triple interactions” in some cases. Since we do not yet know the nature of heterogeneous treatment effects, and there are many possible constellations of results, it is not feasible to fully specify the nature of these additional analyses here, but we do note

that we intend to carry out such analysis to better understand the nature of cash grant and vocational training impacts.

## 2.4 MULTIPLE TESTING ADJUSTMENT

For the main coefficient estimate of interest (for instance,  $\alpha_1$  in equation 1 above), we will present two sets of p-values. We will first present the standard “per comparison” p-values. These are appropriate for a researcher with an *a priori* interest in a specific outcome. For instance, researchers interested in the impact of cash grants on self-employment profits should focus directly on this p-value.

We will also present additional p-values that account for multiple testing. Since we test multiple hypotheses (for instance, for the related but distinct outcomes listed under the first hypothesis regarding self-employment and profits), it is appropriate to control for the possibility that some true null hypotheses will be falsely rejected.<sup>8</sup> Within appropriate subgroups of outcomes, we plan to compute the False Discovery Rate (FDR) adjusted q-values (analogue to the standard P-value) that limit the expected proportion of rejections within a set of hypotheses that are Type I errors. Specifically, we will follow the approach adopted in Casey *et al.* (2012), and the references cited therein. We will carry out multiple testing adjustments within each of our four main families of hypotheses, main hypothesis 1 (H1), main hypothesis 2 (H2), main hypothesis 3 (H3), and the exploratory hypotheses, and present the associated q-values.

## 2.5 OTHER ANALYSIS

---

<sup>8</sup> Following Anderson (2008) and the references cited therein.

Because of the focus on entrepreneurship in the SCY program, we have a particular interest in the characteristics of those who entered self-employment. Non-random selection into self-employment creates great difficulty in credibly assessing the productivity of self-employed workers relative to employed workers. The randomized prospective research design employed by this project provides us with a credible path to quantifying the extent to which non-experimental methods comparing self-employed and employed workers yield biased estimates. Using the results from the take-up of the start-up capital grant we can examine the characteristics of individuals who choose to utilize the grant and start their own businesses, including an analysis of the determinants of starting a registered (i.e. formal sector) business versus an informal business. The presence of high quality panel data from the KLPS will enable us to examine the role of cognitive test scores, risk tolerances, education (including vocational education), and socio-economic background in business formation. We are also interested in a focused analysis of how the grant money was spent. For instance, did individuals use it to invest (for instance, in a business, their homes, or their training), or not? For those who used the grants to invest, what types of investments were made? For instance, were investments in businesses made in fields related to their training of interest? For this set of analyses, we will categorize types of spending into broad and narrower categories.

### **3 MAIN HYPOTHESIS 1 (H1): CASH GRANTS INCREASE SELF-EMPLOYMENT AND PROFITS**

Participants of the SCY evaluation are young adults who were interested in vocational training and starting small businesses. Furthermore, although the SCY cash grants were unconditional, recipients were encouraged to use them to start a businesses or to improve upon an existing business through the scripts and printed materials presented at the time of program introduction. Hence, one set of

key outcomes of interest relates to entrepreneurship. Under this first set of hypotheses, the analysis will focus on an indicator for self-employment, self-employment profits, and hourly self-employment profits. We hypothesize that cash grants will *increase* both self-employment and self-employment profits, and thus plan to carry out one-sided hypothesis tests for the outcomes examined under Main Hypothesis 1. (In particular, we will test whether we can reject the one-sided hypothesis that the effect of cash grants on self-employment is negative.) While most empirical research in economics employs two-sided tests, we feel that the pre-specified nature of the hypothesis, in a setting where we have a strong prior that impacts will be positively signed, makes it particularly appropriate to employ one-sided tests in this context.<sup>9</sup> We will also follow the more standard approach and present p-values implied by two-sided hypotheses tests.

Impacts will be estimated separately for the following outcomes:<sup>10</sup>

- Indicator for being self-employed in a non-agricultural activity (9.2.1).
- Self-reported self-employment profits (monthly) across all businesses.
  - Self-employment profit last month (9.2.10a).
  - Self-employment profit in the last 12 months divided by 12 (9.2.10b).
  - For both of these measures, our main focus will be on the full sample, including those with no profits. We will assess the robustness of results by using log(profits) as the dependent variable among those with non-zero profits. We will also assess

---

<sup>9</sup> We thank Ben Olken for useful conversations regarding the use of one-sided and two-sided hypothesis tests in pre-analysis plans.

<sup>10</sup> Unless otherwise noted, outcomes will be measured using panel data which employs the KLPS-2 (Appendix A), KLPS-3 (Appendix B), SCY F-Module (Appendix C) and KLPS-4 survey instruments (not yet finalized). Question numbers from the KLPS-3 are referenced in what follows, and the corresponding questions from each survey round will be used (although the exact question numbers will vary across rounds).

robustness of the results to dropping the top 1% of profits, given concerns of potential misreporting among those with very high profits.

- Hourly self-reported self-employment profits across all businesses.
  - Profit last month (9.2.10a) multiplied by 7/30 divided by hours worked during last week (9.2.3).
  - Profit in the last 12 months (9.2.10b) divided by 52, divided by hours worked during last week (9.2.3).
  - For both of these outcomes, we will restrict attention to those working at least 10 hours in the last week in self-employment, to avoid potential biases resulting from mis-measurement of hours among those working few hours. (The same holds for other hourly earnings measures below.)

## 4 MAIN HYPOTHESIS 2 (H2): CASH GRANTS AFFECT OTHER LABOR MARKET AND RESIDENTIAL LOCATION OUTCOMES

As the cash grants were unconditional, they could be spent any number of ways, such as on education or training, homestead improvements, or loan repayments. Thus, we hypothesize impacts on a range of individual and household outcomes, detailed in H2, H3, and H4 below. There are natural subgroups within the groups of outcomes, which we will use to estimate mean effects in some cases, as noted below. These mean effects analyses are of course in addition to regressions for each of the individual outcomes.

Under Hypothesis 2, we focus on the impact of cash grants on other labor market and residential location outcomes.

### 4.1 H2A1. CASH GRANTS INCREASE EARNINGS

Impacts will be estimated separately for the following outcomes:

- Non-agricultural earnings (monthly). We compute total monthly non-agricultural earnings as the sum of any profits from businesses and wage earnings. Note that these earnings are set to zero among those not engaged in self- or wage employment.
  - Monthly earnings: Sum of salary last month across all positions (9.3.11) and self-employment profit last month across all businesses (9.2.10a). Our main focus will be on the full sample, including those with no earnings.
  - We will assess the robustness of results by using  $\log(\text{Non-agricultural earnings})$  as the dependent variable among those with non-zero earnings, for comparability with much of the existing literature in labor economics. (The same holds for other earnings measures below.)
  - We will also assess robustness of the results to dropping the top 1% of earners given concerns of potential misreporting among those with very high incomes. (We will employ the same approach for other earnings measures below.)
- Non-agricultural total compensation (monthly). The sum of total earnings and benefits from self-employment and wage work, where benefits are defined in question (9.3.12) - sum of payments in food, NSSF/health insurance, housing benefits, uniforms/clothing benefits, training allowance and other allowances and benefits.
- Non-agricultural earnings per hour: Earnings divided by total hours spent in wage employment and self-employment.
  - Relevant survey questions for earnings (described above), converted into weekly units. Earnings [Sum of salary last month (9.3.11), self-employment profit last month (9.2.10a)] times 7/30 (for weekly income), divided by hours [Sum of hours at work in

the last 7 days (9.3.7), self-employment hours last week (9.23)]. We will restrict attention to those working at least 10 hours in the last week (in non-agricultural employment), to avoid potential biases resulting from mis-measurement of hours among those working few hours. (The same holds for other hourly earnings measures below.)

- Wage employment earnings (monthly): Monthly salary (9.3.11)
- Hourly wage: Amount of salary for the last month (9.3.11) multiplied by 7/30 divided by hours at work in the last 7 days (9.3.7).

#### 4.2 H2A2. CASH GRANTS REDUCE UNEMPLOYMENT AND INCREASE WORK HOURS

Impacts will be estimated separately for the following outcomes:

- Hours worked (“how many hours did you work in the last seven days?”: 9.1.7 for agriculture, 9.2.3 for self-employed, 9.3.7 for wage employment)
  - All sectors
  - By sector (agriculture, self-employment, wage-employment)
- Indicator for positive hours worked (reported positive hours to either 9.1.7, 9.2.3, or 9.3.7).
  - All sectors
  - By sector (agriculture, wage-employment, self-employment)
- Indicator for being unemployed (reported zero hours in self- or wage-employment and currently looking for a job, 9.3.19)

- Indicator for having a “full-time” job (where we define full time as 30 hours or more spent on a given activity, either 9.1.7, 9.2.3 or 9.3.7 is greater than or equal to 30)
- Indicator for having a “full-time” job outside of agriculture (where we define full time as 30 hours or more spent on a given activity, either 9.2.3 or 9.3.7 is greater than or equal to 30)

#### 4.3 H2A3. CASH GRANTS LEAD TO SHIFTS BETWEEN SECTORS

Impacts will be estimated separately for the following outcomes:

- Indicator for farming for the household (9.1.1)
- Indicator for being either a wage earner or of having one’s own non-agricultural business. (9.2.1 and 9.3.1)
- Indicator for being a wage earner. (9.3.1)
- Indicator for having a business that is licensed with authorities. (9.2.7).<sup>11</sup>
- Number of employed workers in place of employment or self-employment. (9.2.5 “How many workers are you currently employing” for self-employed and 9.3.10 for employed)<sup>12</sup>
- We also foresee wanting to explore movements between more specific occupations or sectors – such as those that are more or less capital intensive.

#### 4.4 H2A4. CASH GRANTS LEAD TO GEOGRAPHIC SHIFTS

Impacts will be estimated separately for the following outcomes:

---

<sup>11</sup> This question was not asked during KLPS-2, which was the baseline to the TVVP.

<sup>12</sup> 9.3.10 was not asked during KLPS-2, which was the baseline for the TVVP.

- Indicator for residence in a city (where a city is defined as Nairobi, Mombasa, Kisumu, or Nakuru in Kenya, or Kampala in Uganda, or other large city with at least 1 million population in other countries) (3.1)
- Indicator for residence outside the geographic county of residence at baseline (in 2008) (3.1)
- Indicator for residence outside Kenya (3.1)

## 5 MAIN HYPOTHESIS 3 (H3): CASH GRANTS IMPROVE LIVING STANDARDS AND WELLBEING

### 5.1 H3A: CASH GRANTS IMPROVE LIVING STANDARDS

We hypothesize that cash grants affect welfare directly, or as a consequence of other improvements such as higher profits or earnings, better employment, or additional training. The relatively short time frame of the follow-up surveys are a limitation, as some welfare effects (such as asset accumulation and better health) might only emerge over time and certain behaviors may only evolve slowly.

The following measures will be examined individually, and then combined in the Summary Index  $Y_{3A}$ . We will sometimes employ a summary index using a mean effects approach (as described below). This approach is often useful in aggregating across various related outcomes. The index is the equally-weighted average of the z-scores of the individual components, with scores normalized such that higher scores indicate more “beneficial” outcomes in the hypothesized direction of impact.<sup>13</sup>

---

<sup>13</sup> Kling *et al.* (2007) use this approach and Anderson (2008) uses a similar approach. While we will focus on the Kling *et al.* (2007) approach, as a robustness check we will also present mean effect results using

### ***Food consumption***

- Number of meals eaten yesterday (17.1)
- Number of meals eaten yesterday including meat or fish (17.2)

### ***Economic perception***

- Indicator for responding “Better” to “Compared to two years ago, would you say that your own personal economic situation today is much the same, better, or worse?”  
(15.35)<sup>14</sup>

## **5.2 H3B: CASH GRANTS IMPROVE EMOTIONAL WELLBEING**

The following measures will be examined individually, and then combined in the Summary Index  $Y_{3B}$ . Note that these measures were only collected for an approximately 15% subsample of KLPS-3 respondents, and not at all in KLPS-2 (which was the baseline for the TVVP), and so will only be explored for a subsample of our analysis.

- Increased feeling of happiness: Individual questions 5.1, 5.4, 5.5, 5.6, signed appropriately such that “happy” corresponds to larger values. (E-Module)
- Decreased feeling of anxiety: Individual questions 5.2, 5.3, signed appropriately such that “less anxious” corresponds to larger values. (E-Module)
- Pride at work: Indicator for agrees or agrees strongly with “I feel proud of the work that I do” (E-Module 5.8).

---

Anderson’s (2008) approach, where the outcomes are weighted by the inverse of the variance-covariance matrix to “down-weight” outcomes that are correlated with one another.

<sup>14</sup> This question was not asked during KLPS-2, which was the baseline to the TVVP.

## 6 EXPLORATORY HYPOTHESES (H4)

We will estimate impacts on a number of other outcomes, beyond the three main hypotheses already described. For some of these exploratory outcomes, the “sign” of the cash grants impact is not obvious *ex ante*, making the mean effects approach less useful, and we note some of these cases below.

For other outcomes under this set of hypotheses (as specified below), comparable information was not collected at baseline. We thus estimate impacts according to equation (3) above, rather than making use of the panel framework.

We note that we pre-specify several outcomes here, based on information that was collected in the SCY F-Module. We expect to add several new sets of outcomes, to explore impacts on marriage and fertility, political views and social attitudes, and other families of outcomes in the next pre-analysis plan (similar to what was included in the pre-analysis plan for the TVVP, in Appendix D) – none of these outcomes were included in the SCY F-Module, but they will be included in our KLPS-4 interviews.

### 6.1 H4A1: PHYSICAL HEALTH

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A1}$ .

- Self-reported general health, 5=“very good”, 4=“good”, 3=“fair”, 2=“poor”, 1=“very poor” (17.13 and 17.14)<sup>15</sup>
- Body weight (19.6)

---

<sup>15</sup> Question 17.14 was not asked during KLPS-2, which was the baseline to the TVVP.

## 6.2 H4A2: TRANSFERS

The following measures will be examined individually:

- Indicator for receiving a transfer from outside of household in last 12 months (12.10)
- Indicator for sending a transfer outside the household in last 12 months (12.11)

For individuals selected for the E-module, the following measures will be examined individually:

- Total amount of transfers received by the household in last 12 months (E-Module 3.6b)
- Total amount of transfers sent by the household in last 12 months (E-Module 3.7b)

## 6.3 H4A3: SAVINGS AND CREDIT

For individuals selected for the E-module, the following measures will be examined individually:

- Indicator for has a savings account in a bank (E-Module 3.1)
- Indicator for participates in a SACCO (E-Module 3.2)
- Indicator for participates in a merry-go-round or ROSCA (E-Module 3.3)
- Indicator for has taken loans from a commercial bank/lender in past 12 months (E-Module 3.4)
- Indicator for has taken loans from a shylock/moneylender in past 12 months (E-Module 3.5)
- Indicator for has borrowed money from someone outside of the household in the last 12 months (E-Module 3.6)
- Indicator for has lent money to someone outside of the household in the last 12 months (E-Module 3.7)

- Indicator for stating "would like to start a business" (9.3.27) but cannot / have not because of a lack of credit/start-up capital / materials.

#### 6.4 H4A4: TRAINING

The following measures will be examined individually:

- Indicator for currently in school or vocational training (8.1.1)
- Indicator for ever attended vocational training (8.1.1 and 8.1.7)
- Indicator for ever received a training certificate (8.1.7 and 8.1.16)

#### 6.5 H4A5: AGRICULTURE

The following measures will be examined individually, and combined into summary index  $Y_{4A5}$ :

- Total amount of land used for agriculture in the last 12 months (9.1.3)
- Indicator for cash crop grown in last 12 months (defined as tobacco, cotton, or sugar) (9.1.4)
- Indicator for sold agricultural output in the last 12 months (9.1.6)
- Number of casual workers hired to work on agriculture in the past 12 months (9.1.10)
- Indicator for used fertilizer in the past 12 months (9.1.19a)
- Indicator for used irrigation in the past 12 months (9.1.19b)
- Indicator for used improved/hybrid seeds in the past 12 months (9.1.19c)
- Indicator for purchased agricultural insurance in the past 12 months (9.1.19d)<sup>16</sup>

---

<sup>16</sup> This question was not asked during KLPS-2, which was the baseline to the TVVP.

## 6.6 H4A6: POWER WITHIN THE HOUSEHOLD

The following outcomes will be analyzed individually, among those with children:

- Indicator for has final say in decisions involving child's schooling (18.2.23a)
- Indicator for has final say in decisions involving child's discipline (18.2.23c)
- Indicator for has final say in decisions involving whether to have another child (18.2.23d)

## 6.7 H4A7: OTHER OUTCOMES OF INTEREST

- Indicator for has smoked cigarettes in the last 7 days (17.5)
- Indicator for has had alcoholic drinks in the last 7 days (17.6)

# 7 ADDITIONAL EXPLORATORY HYPOTHESES WITH NO KLPS-2 OR -3 DATA (H4)

Several questions were newly introduced or asked differently in the SCY F-Module in comparison to the earlier data collection rounds, and hence we cannot use the panel estimation defined in equations (1) and (2). For instance, the main KLPS rounds ask about home characteristics and asset ownership at the time of survey. In the SCY F-Module, information was only collected on spending that occurred between the month of SCY grant distribution and the follow-up survey. Thus, for the variables in this section, analysis using the SCY F-Module will not employ the panel structure, but will instead utilize equation (3) defined above. Note that the question numbers for this section only refer to the SCY F-module.

## 7.1 H4A8: IMPROVED HOME CHARACTERISTICS AND ASSET OWNERSHIP

The following outcomes will be analyzed individually, and then combined into summary index  $Y_{4A8}$ .

- Indicator for invested in flooring for the home since month of grant distribution (F-Module 6.1a)
- Indicator for invested in roofing for the home since month of grant distribution (F-Module 6.1b)
- Indicator for invested in electricity for the home since month of grant distribution (F-Module 6.1c)
- Indicator for invested in toilet facilities for the home since month of grant distribution (F-Module 6.1d)
- Indicator for purchased any assets listed in F-Module question 6.2 since month of grant distribution (considered individually)
- Indicator for owns home where household lives (F-Module 5.5)

## 7.2 H4A9: CHANGES IN LAND USE

The following outcomes will be analyzed individually:

- Indicator for purchased land since month of grant distribution (F-Module 5.1)
- Indicator for sold land since month of grant distribution (F-Module 5.2)
- Indicator for rented land to others since month of grant distribution (F-Module 5.3)
- Indicator for rented land from others since month of grant distribution (F-Module 5.4)

## 7.3 H4A10: CHANGES IN POWER WITHIN THE HOUSEHOLD

The following outcomes will be analyzed individually, and then combined into summary index

$Y_{4A10}$ .

- Indicator for is the main decision-maker in the household with regard to money (F-Module 7.1)
- Indicator for controls the money to buy fruit and vegetables (F-Module 7.1a)
- Indicator for controls the money to buy clothes for self (F-Module 7.1b)
- Indicator for controls the money to buy medicine for self (F-Module 7.1c)
- Indicator for controls the money to buy toiletries for self (F-Module 7.1d)
- Indicator for has money that can decide how to use alone (F-Module 7.1e)

The following outcomes will be analyzed individually:

- Indicator for agrees or strongly agrees with statement “whenever I have money on hand, my spouse or other family members always end up requesting some of it.” (F-Module 7.2)
- Indicator for agrees or strongly agrees with statement “people who do well in their business are likely to receive additional requests from family and friends to help out with one expense or another.” (F-Module 7.3)

#### 7.4 H4A11: OTHER OUTCOMES OF INTEREST

The following measures will be examined individually:

- Indicator for preferring a grant when asked if would prefer a Ksh 20,000 grant or a job that would pay 20,000 over 3 months. (F-Module 7.11)
- Indicator for made a new investment in business in past twelve months (among business owners) (F-Module 9.2.13a)

# **Pre-analysis Plan (PAP) for the Evaluation of the Technical and Vocational Voucher Program (TVVP) in Kenya<sup>1</sup>**

**Investigators:** Joan Hamory Hicks, Michael Kremer, Isaac Mbiti, and Edward Miguel

**Date:** December 2012

**Summary:** This document outlines the plan for analyzing the impact of the Technical and Vocational Voucher Program (TVVP) in Kenya, including regression specifications, outcome variables, and covariates. We note that we anticipate carrying out some additional analyses beyond those included in this plan, so this plan is not meant to be comprehensive or preclude additional analysis. We also plan to register an additional pre-analysis plan before analyzing the second wave of the KLPS-3 dataset, which will be collected in 2013-14.

# 1 OVERVIEW

## 1.1 SUMMARY

Youth unemployment is a critical social issue in less developed countries. Technical and vocational training has been suggested as a potential solution, enabling students to acquire marketable skills in a relatively short period of time. However, existing research focused on the ability of such training to improve labor market outcomes is limited. The Technical and Vocational Vouchers Program (TVVP) is a randomized evaluation of a youth training intervention in Kenya that seeks to address this research gap.

In 2008, 2,163 out-of-school youth (between the ages of 18 and 30) from the Kenya Life Panel Survey (KLPS) sample applied to receive a vocational education tuition voucher through TVVP. A randomly selected half were awarded a voucher while the other half served as the comparison group. Among voucher winners, a randomly selected half were awarded a voucher that could only be used in public vocational institutions (what we call the “restricted voucher”) and the other half were awarded a voucher that could be used in either public or private institutions (the “unrestricted voucher”).

The project also included a cross-cutting information intervention at baseline. This intervention exposed a randomly selected half of the sample (including both treatment and control individuals) to information about the potential labor market returns to vocational education (through information meetings held in residential sublocations), with a focus on the high average earnings in certain traditionally male-dominated fields.

Prior to the launch of the TVVP, only two studies (to our knowledge) had used a randomized design to evaluate vocational training programs, both in Latin America. Card *et al.*<sup>2</sup> (2011)'s study of "*Juventud y Empleo*" in the Dominican Republic finds moderate returns in earnings (10%), and a great deal of heterogeneity in returns across gender, age, baseline educational achievement and residential location. It is unclear from their results whether subsidizing such training is a cost effective policy option. Attanasio *et al.*<sup>3</sup> (2011) study a similar program, "*Jóvenes en Acción*", in Colombia and point to slightly larger average returns to vocational training (12% overall, and 18% for women), and clear evidence of cost effectiveness. No such studies have been carried out to our knowledge in Sub-Saharan Africa, where the problem of youth unemployment is particularly severe, and where labor markets may be different than in other contexts.

## 1.2 DATA

The TVVP evaluation will primarily employ data from Round 3 of the Kenyan Life Panel Survey (KLPS-3), a longitudinal dataset that contains educational, health, nutritional, demographic, and labor market information for over 10,000 Kenyan youth. The KLPS-3 survey instruments are included as Appendix A. It will be useful to refer to them when we present variable definitions below. The KLPS-3 sample is drawn from participants of two earlier randomized experiments: the Primary School Deworming Program (PSDP)<sup>4</sup>, and the Girls' Scholarship Program (GSP)<sup>5</sup>.

Additional data were collected for the 2,705 individuals who attended the preliminary TVVP informational meetings, namely, a short survey to collect information on individual beliefs and expected earnings with and without vocational education. The final sample of 2,163 individuals is composed of those who attended the follow-up TVVP meeting, brought a letter of support from a training institution administrator or a local leader (i.e., a chief or village elder), and completed a survey stating their training program preferences.

### 1.3 ANALYSIS AND DATA EXAMINED TO DATE

Initial program take-up patterns have already been examined in the “Report for Spanish Impact Evaluation Fund (SIEF) Phase II” (Appendix B), prepared for the World Bank, which provided funding for the vouchers and analysis of the take-up. As a consequence, a portion of the “first stage” analysis described below has already been examined, although only for initial program enrollment using administrative data. While the first stage we propose to implement for the analysis of program impacts differs somewhat from what is presented in the report (as described below), the first stage analysis should not be thought of as “pre-analysis”.

A midline survey was collected in mid-2010 for roughly 300 individuals among the 2,163 in the full sample. A main goal of the midline survey was to pretest questions that were later incorporated into the main KLPS-3 surveys. We also examined treatment versus control differences for this subsample, as reported in Tables 16 and 17 of the SIEF report, including on several labor market outcomes. However, we do not believe that this compromises the pre-analysis plan presented below, since too little data was collected to rigorously assess hypotheses. Data was only collected for 14.7% of the overall TVVP sample. Furthermore, at the time of data collection in 2010, we lacked labor market outcomes for roughly three quarters of the treatment subjects (in the midline

sample), as they were still enrolled in a training program at that time, making any treatment versus control comparisons difficult to interpret causally. For instance, treatment group individuals were less likely to be employed in wage labor or self-employment at the time of the midline survey, presumably since many were enrolled in training programs.

The KLPS Round 3 follow-up survey launched in 2011 will provide a more appropriate timeframe for assessing the impact of the vocational education program on labor market outcomes, since individuals will have completed even the longest duration training programs by that time. At the time of writing this plan, data collection for the KLPS-3 is currently in progress, and is planned to be completed by mid-2014. We have not examined or estimated any program treatment effects using the KLPS-3 data collected so far before registering this plan.

KLPS data collection is divided into two waves (Wave 1 and Wave 2). Each wave is a representative (i.e., randomly drawn) subsample of the full KLPS sample. KLPS-3 Wave 1 data collection is currently being finalized (in December 2012). We anticipate that KLPS-3 Wave 2 data collection will begin in April 2013 and end in mid-2014.

We plan to register an additional pre-analysis plan before analyzing the KLPS-3 Wave 2 data. We anticipate that the analysis of the Wave 1 data using the specifications laid out in this pre-analysis plan and any other tests, will generate a set of additional hypotheses that can then be tested on the Wave 2 data. For instance, findings of large effects (or non-effects) among particular subgroups may raise questions about the mechanisms underlying those effects (or non-effects), which additional tests may help to address. We plan to describe these additional hypothesis tests in detail in the future pre-analysis plan.

## 1.4 ANALYSIS OVERVIEW

We will employ an instrumental variable two-stage least squares (IV-2SLS) approach to estimate the treatment effect on the treated (TOT) of vocational education on various outcomes of interest. Specifically, we will use assignment to the voucher treatments and the information treatment as instruments for vocational training. The TOT might differ from the intention-to-treat (ITT) effect because the TVVP experiment did not have perfect compliance: in preliminary analysis, we found that 26% of individuals offered a voucher did not take it up, and roughly 4% of individuals in the control group completed some vocational training. We choose to focus on the TOT because program costs for non-compliers are small relative to the tuition and administration costs for voucher recipients who choose to attend, and we are also inherently interested in the benefits for participants. Outcomes will be estimated individually, and in some cases also as mean effects of averaged z-score values for groupings of related outcomes, as discussed below.

In addition to the main IV-2SLS specification, for completeness we will present reduced-form estimates (i.e., differences between those who were offered a voucher and those who were not), which is equivalent to the ITT estimate.

The remaining sections of this document lay out the first stage regression; the main research hypothesis regarding impacts on earnings, where we also describe our planned regression specifications; the main research hypotheses regarding other labor market outcomes, living standards and wellbeing; and exploratory hypotheses. In each section, we describe the main features of the analysis to be performed, including the use of mean effect indices (where applicable), p-value adjustments that account for multiple testing, and robustness checks.

As discussed above, this document captures our current thinking about analysis with this data but we anticipate carrying out some additional analyses beyond those included in this plan, so this plan is not meant to be comprehensive nor to preclude additional analysis.<sup>6</sup>

## 2 FIRST STAGE

As mentioned above, we have already carried out some preliminary analysis of program take-up outcomes. These preliminary results are included in the “Report for Spanish Impact Evaluation Fund (SIEF) Phase II” for the World Bank, which is included as Appendix B.

Assignment to voucher treatment must satisfy several conditions to be a valid instrument for vocational training, including the *exogeneity* and the *relevance* of the instrument.

“Exogeneity” is satisfied by the “successful” randomization of subjects into the treatment and control groups, in terms of balance along observable characteristics, which we demonstrate in the SIEF report (see Table 1), and which we also intend to present in this paper.

Regarding “relevance”, there are a number of compelling reasons to believe that a vocational education tuition voucher should increase enrollment. Most obviously, eliminating or dramatically reducing the cost of vocational education will increase demand through price effects. Subsidies may ease credit constraints that prevent enrollment or lead to dropout prior to completion; enable youth to enroll in higher quality institutions, including those that offer preparation for official certification exams (note that the payment of certification exam fees was typically covered by the TVVP program); and allow students to spend more time studying, rather than working to cover their tuition payments.

---

<sup>6</sup> Casey *et al.* (2012, *Quarterly Journal of Economics*) discusses the advantages of allowing researchers to include additional analysis, in the context of pre-analysis plans.

Consistent with these expectations, preliminary analysis in the SIEF report shows much higher vocational education enrollment among treatment youth (at 74% for treatment vs. only 4% for control, in terms of attending at least some vocational training). At the time of data collection for that report, however, most students had not yet completed their courses so the first stage results as expressed using final vocational training attainment are likely to be somewhat different.

## 2.1 PROGRAM UPTAKE MEASURES

The primary measure of vocational training completed (the endogenous variable in the IV-2SLS analysis) will be number of years (and fractions thereof) of vocational education attended. Focusing on the years of schooling completed is standard in Mincerian-style return to education studies in labor economics. Given our interest in the differences between public and private education, we will also examine the years of private vocational education completed. An alternative take-up measure – e.g., indicators for any enrollment in vocational education – will be employed in robustness checks.

### 2.1.1 PRIMARY UPTAKE MEASURES

- Number of years (and fractions thereof) of vocational education
- Number of years (and fractions thereof) of private vocational education

### 2.1.2 ALTERNATIVE UPTAKE MEASURES

- Indicator for any enrollment in a vocational education program
- Indicator for any enrollment in a private vocational education program

Presenting two sets of endogenous variables immediately raises an exclusion restriction concern.

The two sets of measures are obviously closely related, and while we will emphasize the “primary”

measures, we plan to present both since we anticipate that some readers will prefer a “scaling” of program impacts in terms of years of vocational education completed, while others will prefer the indicator for any vocational education enrollment.

## 2.2 FIRST STAGE REGRESSIONS

Before getting to the first stage analysis, we first lay out the second stage equation. To estimate the effect of vocational education on an outcome  $y$  for individual  $i$ , one would estimate the following equation:

$$y_i = \alpha_0 + \alpha_1 * VocEd_i + W_i' \gamma + \eta_i,$$

where  $VocEd_i$  is the measure of individual vocational education (i.e., years of training completed, as above) and  $W_i$  is a vector of covariates. Following Bruhn and McKenzie (2009),  $W$  contains the vector  $X$  of characteristics used for stratification during the randomization, namely: the individual’s original project participation (in PSDP or GSP), their gender, and their preferred training course. Course preference consists of six indicator variables for the major occupational groups, namely, (i) construction and related trades, (ii) textiles and tailoring, (iii) mechanics and driving, (iv) beauty, (v) computers/secretarial/business, and (vi) other. (As is standard, the “(vi) other” category indicator will be excluded from the regression to avoid collinearity problems.)  $W$  will also contain the following additional individual characteristics:

- Age (in 2008)
- School attainment (by 2008, baseline)
- Indicator for any prior enrollment in vocational education (at baseline)
- Stated preference for a private (versus public) training institution (at baseline)

- Distance to closest vocational education institution<sup>7</sup>
- Distance to closest private vocational education institution
- Indicators for treatment status in the earlier PSDP and GSP programs.

(Note that we plan to assess the baseline “balance” across the various experimental treatment groups with the full vector of characteristics  $W$ .)

In the absence of randomization, the above equation suffers from selection bias. Individuals with certain unobserved characteristics might both obtain more vocational training and also have higher earnings, for instance, if “high ability” individuals tend to select into obtaining more training. (Alternatively, we might understate true impacts if “low ability” individuals generally select into vocational training, rather than university education, say.) To overcome this issue, we will employ an instrumental variable (IV) approach to estimate the impacts of vocational training, using random assignment of vouchers and the information treatment as instruments for take-up.

### 2.2.1 MAIN FIRST STAGE ANALYSIS

We will present both “sparse” and “full” first stage results. The sparse specifications are easier to interpret, while the full specification will contain more detailed information on vocational

---

<sup>7</sup> We have not yet constructed these “distance to vocational education institution” variables. We plan to choose the functional form of these variables based on their predictive power in the first stage regression. Possible functional forms, beyond this simple linear functional form mentioned here, including higher order polynomials of distance, or indicator variables for the presence of an institution within a certain distance. We are also investigating the feasibility in our data of constructing these distances from the respondent’s home; if this is not feasible (due to missing residential GPS data for some respondents), we will likely instead use the distance from the centroid of their sublocation of residence. A further issue pertains to the GPS location for vocational training institutions. We have extensive data on these locations within Busia County but limited data for Nairobi, Kisumu, and several other locations where some subjects live. There thus are likely to be a non-trivial number of respondents with missing distance information. We will likely include an additional indicator variable for “missing distance data” into the vector  $W$  (and set the distance measures to the average for individuals with missing data). If data constraints mean that it is ultimately not possible to construct a credible measure of distance from respondents’ residence to vocational training institutions, then we will exclude these distance variables from the vector  $W$  entirely.

education take-up patterns, and will be necessary when we estimate heterogeneous treatment effects. The sparse first stage equation is as follows:

(eqn. 1)

$$VocEd_i = \alpha_0 + \alpha_1 * AnyVoucher_i + \alpha_2 * UVoucher_i + \alpha_3 * InfoTreat_i + \alpha_4 * (AnyVoucher_i \times InfoTreat_i) + \alpha_5 * (UVoucher_i \times InfoTreat_i) + W_i' \gamma + \eta_i$$

There are three variables determined by the experimental research design, *AnyVoucher* (an indicator for receiving any vocational education voucher), *UVoucher* (an indicator for receiving an “unrestricted” voucher, rather than one that could only be used at public institutions), and *InfoTreat* (an indicator for receiving information about the potential labor market returns to vocational education). We also include the interactions of the information treatment indicator with the two voucher indicators.

The full first stage specification in equation 1’ additionally includes interactions of the voucher treatment variables with the covariate vector  $W$ , as additional instrumental variables.

(eqn. 1’)

$$VocEd_i = \alpha_0 + \alpha_1 * AnyVoucher_i + \alpha_2 * UVoucher_i + \alpha_3 * InfoTreat_i + \alpha_4 * (AnyVoucher_i \times InfoTreat_i) + \alpha_5 * (UVoucher_i \times InfoTreat_i) + (AnyVoucher_i \times W_i)' \alpha_A + (UVoucher_i \times W_i)' \alpha_U + W_i' \gamma + \eta_i$$

In the main analysis, we will use the sparse first stage specification, unless we can reject the hypothesis that the full specification provides an equally good fit to the data (using an F-test). While we have not yet analyzed the take-up data from KLPS-3 or the final program administrative data, the preliminary analysis presented in the SIEF report (Appendix B) indicates that many of the

interaction terms employed as instrumental variables in the full first stage specification are likely to have considerable predictive power in understanding vocational education take-up choices.

### 2.2.2 PUBLIC VS. PRIVATE INSTITUTIONS

In some analysis below, we will also investigate the impact of training at private vocational institutions, beyond any impacts to attending a public institution. We use the same instruments as laid out in equations 1 and 1' above, but here the endogenous variable is *Private*, a measure of years (or fractions thereof) of training completed at private training institutions:

(eqn. 2)

$$Private_i = \pi_0 + \pi_1 * AnyVoucher_i + \pi_2 * UVoucher_i + \pi_3 * InfoTreat_i + \pi_4 \\ * (AnyVoucher_i \times InfoTreat_i) + \pi_5 * (UVoucher_i \times InfoTreat_i) + W_i' \theta + v_i$$

(eqn. 2')

$$Private_i = \pi_0 + \pi_1 * AnyVoucher_i + \pi_2 * UVoucher_i + \pi_3 * InfoTreat_i + \pi_4 \\ * (AnyVoucher_i \times InfoTreat_i) + \pi_5 * (UVoucher_i \times InfoTreat_i) \\ + (AnyVoucher_i \times W_i)' \pi_A + (UVoucher_i \times W_i)' \pi_U + W_i' \theta + v_i$$

### 2.2.3 HETEROGENEOUS TREATMENT EFFECTS

A key point of interest for policy makers is the distribution of program impacts in the population. Are vocational education vouchers best targeted at younger people or those who are older? Should women be provided with additional subsidies given their (potentially) higher returns, or do they experience lower returns in the labor market? Should training in certain occupational categories or at certain types of institutions (most importantly, private vs. public) be subsidized more than others? In order to answer these questions, we will estimate heterogeneous effects along seven main dimensions, denoted by the vector *Z*, which is a subset of the vector *W*:

- Gender
- Age (in 2008)
- School attainment (by 2008, baseline)
- Indicator for any enrollment in vocational education (prior to program)
- Stated preference for a private (versus public) training institution (at baseline)
- Stated preference for course/occupation at baseline
  - As laid out above, the primary occupation groups that we will focus on include: (i) construction and related trades, (ii) textiles and tailoring, (iii) mechanics and driving, (iv) beauty, (v) computers/secretarial/business, and (vi) other
- Participation and treatment status in the earlier PSDP and GSP programs.

We will estimate heterogeneous treatment effects using interaction terms. The first stage regression for the heterogeneous treatment effects analysis is equation 1' above.

We also intend to carry out additional analyses based on the nature of any heterogeneous treatment effects that we estimate. For instance, if we were to find significantly smaller earnings impacts for females than males, say, it would be natural to explore if the particular life circumstances of females in our sample (e.g., their baseline marital status, or having young children at home) also have additional explanatory power. This would lead us to examine additional interaction effects, including potentially “triple interactions” in some cases. Since we do not yet know the nature of heterogeneous treatment effects, and there are many possible constellations of results, it is not feasible to fully specify the nature of these additional analyses here, but we do note that we intend to carry out such analysis to better understand the nature of

vocational education impacts. We also intend to pre-specify these additional tests in the pre-analysis plan we intend to register before analyzing the KLPS-3 Wave 2 data, as noted above.

## 2.3 ROBUSTNESS CHECKS

For robustness, and to provide alternative interpretations for interested readers, we will also present results using the alternative take-up definition listed in section 2.1.2.

## 3 MAIN HYPOTHESIS 1 (H1): VOCATIONAL EDUCATION INCREASES EARNINGS.

The main outcome of interest is labor earnings, and the analysis will focus on total earnings as well as hourly earnings (wages). It is important to focus to the extent possible on total income, since welfare in part depends on the extent to which non-agricultural income displaces agricultural income. Yet we will also estimate impacts on non-agricultural earnings, given that we expect the main impacts of vocational training (which focuses on non-agricultural trades) to be reflected in non-agricultural income. It is also notoriously difficult to accurately measure agricultural productivity in rural Africa, making it natural to focus on non-agricultural earnings and outcomes, since there is likely to be less measurement error in these outcomes than in agricultural productivity measures.<sup>8</sup>

We hypothesize that vocational education will *increase* both total earnings and non-agricultural earnings, and thus plan to carry out one-sided hypothesis tests for the outcomes examined under Main Hypothesis 1 (and listed in 3.1 below). (In particular, we will test whether we can reject the one-sided hypothesis that the effect of vocational education on earnings is negative.) While most

---

<sup>8</sup> This is a well-known problem in development economics, and is a result of mis-measured agricultural production, imperfect recall of household consumption of own production, the fact that multiple household members provide inputs on the family farm, difficulties inherent in “pricing” individuals’ labor effort and time, among other issues.

empirical research in economics employs two-sided tests, we feel that the pre-specified nature of the hypothesis, in a setting where we have a strong prior that impacts will be positively signed, makes it particularly appropriate to employ one-sided tests in this context.<sup>9</sup> We will also follow the more standard approach and present p-values implied by two-sided hypotheses tests.

### 3.1 OUTCOMES<sup>10</sup>

Impacts will be estimated for the following outcomes.

- Total earnings (monthly). Total earnings are calculated as the sum of reported total monthly non-agricultural earnings – business profits and wage earnings – and estimated agricultural productivity.
  - Wage earnings last month across all positions (9.3.11), self-employment profit last month across all businesses (9.2.10a), and estimated agricultural productivity, using reported agricultural labor hours (9.1.7) valued at local labor prices (average local agricultural wages reported in 9.1.10, 9.1.11, and 9.1.12). Our main focus will be on the full sample, including those with no earnings.
  - We will assess the robustness of results by using  $\log(\text{Total earnings})$  as the dependent variable among those with non-zero earnings, for comparability with much of the existing literature in labor economics.
  - We will also assess robustness of the results to dropping the top 1% of earners within each of the six main training occupational categories described above, as

---

<sup>9</sup> We thank Ben Olken for useful conversations regarding the use of one-sided and two-sided hypothesis tests in pre-analysis plans.

<sup>10</sup> Recall that outcomes will be measured using the KLPS-3 survey instruments (Appendix A). Question numbers from those surveys are referenced below.

well as the top 1% in all other occupations, given concerns of potential misreporting among those with very high incomes.

- Non-agricultural earnings (monthly). We compute total monthly non-agricultural earnings as the sum of any profits from businesses and wage earnings (as above). Note that these earnings are set to zero among those engaged only in agriculture.
  - Monthly earnings: Sum of salary last month across all positions (9.3.11) and self-employment profit last month across all businesses (9.2.10a). Once again, our main focus will be on the full sample, including those with no earnings.
  - We will assess the robustness of results by using  $\log(\text{Non-agricultural earnings})$  as the dependent variable among those with non-zero earnings, for comparability with much of the existing literature in labor economics. (The same holds for other earnings measures below.)
  - We will also assess robustness of the results to dropping the top 1% of earners within each of the six main training occupational categories described above, as well as the top 1% in all other occupations, given concerns of potential misreporting among those with very high incomes. (We will employ the same approach for other earnings measures below.)
- Non-agricultural total compensation (monthly). The sum of total earnings and benefits from self-employment and wage work, where benefits are defined in question (9.3.12) - sum of payments in food, NSSF/health insurance, housing benefits, uniforms/clothing benefits, training allowance and other allowances and benefits.
- Non-agricultural earnings per hour: Earnings divided by total hours spent in wage employment and self-employment.

- Relevant survey questions for earnings (described above), converted into weekly units. Earnings [Sum of salary last month (9.3.11), self-employment profit last month (9.2.10a)] times 7/30 (for weekly income), divided by hours [Sum of hours at work in the last 7 days (9.3.7), self-employment hours last week (9.2.3)]. We will restrict attention to those working at least 10 hours in the last week (in non-agricultural employment), to avoid potential biases resulting from mis-measurement of hours among those working few hours. (The same holds for other hourly earnings measures below.)
- Wage employment earnings (monthly): Monthly salary (9.3.11)
- Hourly wage: Amount of salary for the last month (9.3.11) multiplied by 7/30 divided by hours at work in the last 7 days (9.3.7).
- Self-reported self-employment profits (monthly).
  - Self-employment profit last month (9.2.10a)
  - Self-employment profit last 12 months divided by 12 (9.2.10b)
- Hourly self-reported self-employment profits.
  - Profit last month (9.2.10a) multiplied by 7/30 divided by hours worked during last week (9.2.3).
  - Profit last 12 months (9.2.10b) divided by 12, divided by hours worked during last week (9.2.3).

## 3.2 REGRESSION SPECIFICATIONS

### 3.2.1 MAIN SPECIFICATION

The main regression specification is as follows:

(eqn. 3)

$$y_i = \beta_0 + \beta_1 * VocEd_i + W_i' \varphi + \varepsilon_i,$$

where  $VocEd_i$  is instrumented as in the first stage regressions laid out above. Our primary interest will be in  $\beta_1$ , which captures the effect of obtaining an additional year of vocational education on the outcome.

In addition, we will sometimes employ a summary index using a mean effects approach (as described below). This approach is often useful in aggregating across various related outcomes. The index is the equally-weighted average of the z-scores of the individual components, with scores normalized such that higher scores indicate more “beneficial” outcomes in the hypothesized direction of impact.<sup>11</sup>

### 3.2.2 PUBLIC INSTITUTIONS VERSUS PRIVATE INSTITUTIONS

Additional analysis will be carried out to examine whether the returns are higher to attending private vocational training institutions:

(eqn. 4)

$$y_i = \beta_0 + \beta_1 * VocEd_i + \beta_2 * Private_i + W_i' \varphi + \varepsilon_i,$$

where  $VocEd$  and  $Private$  are as above, namely, they are respectively the years of vocational training and years of vocational training in private institutions that the individual obtained.

### 3.2.3 HETEROGENEOUS TREATMENT EFFECTS:

---

<sup>11</sup> Kling *et al.* (2007) use this approach and Anderson (2008) uses a similar approach. While we will focus on the Kling *et al.* (2007) approach, as a robustness check we will also present mean effect results using Anderson’s (2008) approach, where the outcomes are weighted by the inverse of the variance-covariance matrix to “down-weight” outcomes that are correlated with one another.

We will carry out the following analysis to estimate heterogeneous treatment effects:

(eqn. 5)

$$y_i = \beta_0 + \beta_1 * VocEd_i + (VocEd_i \times Z_i)' \beta_2 + W_i' \varphi + \varepsilon_i,$$

where  $Z_i$  is the vector of traits for which we investigate heterogeneous effects (which is a subset of  $W$ ), and  $(VocEd_i \times Z_i)$  is this vector interacted with the vocational education measure. As a robustness check, we will also estimate equation 5 including interactions with one element of  $Z$  at a time.

### 3.2.4 REDUCED FORM:

For completeness, we will also provide a reduced form estimate that gives the intent-to-treat (ITT) impact. Here the key explanatory variables are the individual's voucher assignment. For ease of interpretation, we will present results for the more parsimonious version of the reduced form, equivalent to the "sparse" first stage specification, as well as the "full" reduced form:

(eqn. 6)

$$y_i = \alpha_0 + \alpha_1 * AnyVoucher_i + \alpha_2 * UVoucher_i + \alpha_3 * InfoTreat_i + \alpha_4 * (AnyVoucher_i \times InfoTreat_i) + \alpha_5 * (UVoucher_i \times InfoTreat_i) + W_i' \gamma + \eta_i.$$

(eqn. 6')

$$y_i = \alpha_0 + \alpha_1 * AnyVoucher_i + \alpha_2 * UVoucher_i + \alpha_3 * InfoTreat_i + \alpha_4 * (AnyVoucher_i \times InfoTreat_i) + \alpha_5 * (UVoucher_i \times InfoTreat_i) + (AnyVoucher_i \times W_i)' \alpha_A + (UVoucher_i \times W_i)' \alpha_U + W_i' \gamma + \eta_i$$

## 3.3 MULTIPLE TESTING ADJUSTMENTS

For the main coefficient estimate on vocational education (for instance,  $\beta_1$  in equation 3 above), we will present two sets of p-values. We will first present the standard “per comparison” p-values. These are appropriate for a researcher with an *a priori* interest in a specific outcome. For instance, researchers interested in the impact of vocational education on total non-agricultural earnings should focus directly on this p-value.

We will also present additional p-values that account for multiple testing. Since we test multiple hypotheses (for instance, for the related but distinct outcomes listed under the above hypothesis regarding earnings impacts), it is appropriate to control for the possibility that some true null hypotheses will be falsely rejected.<sup>12</sup> Within appropriate subgroups of outcomes, we plan to compute the Family-wise Error Rate (FWER), which is the probability that at least one of the true null hypotheses of the family is rejected. This FWER approach adjusts the p-values of each test upward to reduce the probability of a false rejection. Specifically, we will follow the approach adopted in Casey *et al.* (2012), and the references cited therein. We will carry out multiple testing p-value adjustments within each of our four main families of hypotheses, main hypothesis 1 (H1), main hypothesis 2 (H2), main hypothesis 3 (H3), and exploratory hypotheses, and present the associated adjusted p-values.

#### 4 MAIN HYPOTHESIS 2 (H2): VOCATIONAL EDUCATION AFFECTS OTHER LABOR MARKET OUTCOMES

Treatment group individuals are hypothesized to be more likely to be employed, to work longer hours overall, and in different occupations than the control group, with a shift towards work in services and manufacturing and away from agricultural work. These employment opportunities may coincide with greater geographic mobility.

---

<sup>12</sup> Following Anderson (2008) and the references cited therein.

## 4.1 H2A1. WORK HOURS AND EMPLOYMENT

The following measures will be examined individually.

- Hours worked (“how many hours did you work in the last seven days?”: 9.1.7 for agriculture, 9.2.3 for self-employed, 9.3.7 for wage employment, and 6.15 for home production)
  - All sectors
  - By sector (agriculture, self-employment, wage-employment, home production)
- Indicator for positive hours worked (reported positive hours to either 9.1.7, 9.2.3, or 9.3.7).
  - All sectors
  - By sector (agriculture, wage-employment, self-employment, home production)
- Indicator for being unemployed (reported zero hours in self- or wage-employment and currently looking for a job, 9.3.19)
- Indicator for having a “full-time” job (where we define full time as 30 hours or more spent on a given activity, either 9.1.7, 9.2.3 or 9.3.7 is greater than or equal to 30)

## 4.2 H2A2. SECTORAL SHIFTS

The following measures will be examined individually.

- Indicator for being either a wage earner or of having one’s own non-agricultural business. (9.2.1 and 9.3.1)

- Indicator for being a wage earner. (9.3.1)
- Indicator for being self-employed with a non-agricultural activity. (9.2.1)
- Indicator for having a business that is licensed with authorities. (9.2.7).
- Number of employed workers in place of employment or self-employment. (9.2.5 “How many workers are you currently employing” for self-employed and 9.3.10 for employed)

#### 4.3 H2A3. GEOGRAPHIC SHIFTS AND URBAN RESIDENCE

The following measures will be examined individually.

- Indicator for residence in a city (where a city is defined as Nairobi, Mombasa, Kisumu, or Nakuru in Kenya, or Kampala in Uganda, or other large city with at least 1 million population in other countries)
  - Current (3.1)
  - Current or for at least four months between 2009 and time of survey (3.1 and Section 12)
- Indicator for residence outside the geographic county of residence at baseline (in 2008)
  - Current (3.1)
  - Current or for at least four months between 2009 and time of survey
- Indicator for residence outside Kenya
  - Current (3.1)
  - Current or for at least four months between 2009 and time of survey (3.1 and Section 12)

## 5 MAIN HYPOTHESIS 3 (H3): VOCATIONAL EDUCATION AFFECTS LIVING STANDARDS AND WELLBEING

We will examine two families of outcomes under this hypothesis: (i) living standards measures, and (ii) measures of physical/emotional wellbeing. There are natural subgroups within the two groups of outcomes, which we will use to estimate mean effects in some cases, as noted below. These mean effects analyses are of course in addition to regressions for each of the individual outcomes.

### 5.1 H3A: TVVP IMPROVES LIVING STANDARDS

We hypothesize that participation in vocational education affects welfare as a consequence of higher earnings, improved labor market outcomes, and possibly any non-pecuniary benefits from education. The relatively short time frame of the follow-up survey is a limitation, as some welfare effects (such as asset accumulation and better health) might only emerge over time and certain behaviors may only evolve slowly.

The following measures will be examined individually, and then combined in the Summary Index  $Y_{3A}$ .

#### ***Food consumption***

- Number of meals per day (17.1)
- Number of meals including meat or fish (17.2)

#### ***Improved home characteristics and asset ownership***

- Indicator for improved materials for the floor and the roof (6.1 and 6.2). (Improved floor materials include cement; improved roof materials include iron and cement.)

- Indicator for having electricity (6.3)
- Indicator for having a toilet (6.4)
- Number of rooms (6.5)
- Indicator for having in-house piped water (6.6)
- Indicator for owning the house (6.12)
- All assets listed in question 6.14 (considered individually)

### ***Economic perception***

- Indicator for responding “Better” to “Compared to two years ago, would you say that your own personal economic situation today is much the same, better, or worse?” (15.35)

### ***For individuals selected for the E+-Module:***

For a representative subset of approximately 17% of the KLPS-3 sample, we are also collecting detailed consumption expenditure survey in the E+ Module. Since this data is only available for a subsample, thus limiting the statistical power of the test, we will not include these measures in the summary index discussed above nor in the multiple testing adjustments. In this subsample, we will examine the follow outcomes:

- Value of consumption:
  - Total consumption, including both food and non-food items
  - Consumption of non-food items: the sum of items in section 10 (frequent non-food items) and section 11 (non-frequent non-food items).

- Consumption of food items: the sum of items in section 12 (snacks outside the home) and section 13 (food).

## 5.2 H3B: VOCATIONAL EDUCATION IMPROVES EMOTIONAL WELLBEING

### ***Self-reported measures of emotional health and wellbeing***

*For individuals selected for the E-module:*

The following measures will be examined individually, and then combined in the Summary Index  $Y_{3B}$ .

- Increased feeling of happiness: Individual questions 5.1, 5.4, 5.5, 5.6, signed appropriately such that “happy” corresponds to larger values.
- Decreased feeling of anxiety: Individual questions 5.2, 5.3, signed appropriately such that “less anxious” corresponds to larger values.
- Perceived control: Indicator for agrees or agrees strongly with “I have control over what happens in my life” (15.47).
- Pride at home: Indicator for agrees or agrees strongly with “I feel proud to show my friends or other visitors where I live” (5.7).
- Pride at work: Indicator for agrees or agrees strongly with “I feel proud of the work that I do” (5.8).

## 6 EXPLORATORY HYPOTHESES

We will estimate impacts on a number of other outcomes, beyond the three main hypotheses already described. For some of these exploratory outcomes, the “sign” of the vocational education

impact is not obvious *ex ante*, making the mean effects approach less useful, and we note some of these cases below.

## 6.1 H4A (H4A1-H4A11): TVVP AFFECTS INDIVIDUAL OPINIONS AND SOCIAL ATTITUDES

Using related survey questions, Friedman *et al.* (2012) find that boosting academic learning among primary school girls leads to impacts on certain dimensions of their knowledge, opinions and social views. We will use a similar set of measures and groupings to evaluate the impact of TVVP.

### 6.1.1 H4A1: DECREASED ATTACHMENT TO ETHNIC IDENTITY

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A1}$ .

- Indicator for ethnic identity is not “very important” to respondent (16.15).
- Indicator for feeling that one does not belong first and foremost to ethnicity/language group (15.1).

### 6.1.2 H4A2: DECREASED ATTACHMENT TO RELIGIOUS IDENTITY

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A2}$ .

- Indicator for religious identity is not “very important” to respondent (16.8).
- Indicator for feeling that one does not belong first and foremost to a religious group (15.1).

### 6.1.3 H4A3: VIEWS ON GENDER EQUALITY

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A3}$ .

- Indicator for agree or strongly agree with “In our country, women should have equal rights and receive the same treatment as men do.” (vs. “Women have always been subject to traditional laws and customs, and should remain so.”) (15.45)
- Indicator for agree or strongly agree with “No one has the right to use physical violence against anyone else.” (vs. “A married man has a right to beat his wife if she misbehaves.”) (15.46)
- Indicator for agree or strongly agree with “If the wife is working outside the home, then the husband should help her with household chores.” (15.32)
- Indicator for disagree or strongly disagree with “The important decisions in the family should be made by the men of the family.” (15.31)
- Indicator for agree or strongly agree with “It is ok for a women to be a mechanic” (15.30)
- Indicator for agree or strongly agree with “Women can be good politicians and should be encouraged to stand in elections.” (vs. “Women should stay at home to take care of their children.” (15.44)

#### 6.1.4 H4A4: INCREASED SUPPORT FOR DEMOCRACY

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A4}$ .

- Indicator for agree or strongly agree with: "We should choose our leaders in this country through regular, open and honest elections." (15.27)
- Indicator for agree or strongly agree with: “Democracy is preferable to any other kind of government” (15.23)

- Indicator for disagree or strongly disagree with: "Only one political party should be allowed to stand for election and hold office." (15.40)

#### 6.1.5 H4A5: CONSUMPTION OF MEDIA AND POLITICAL KNOWLEDGE

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A5}$ .

- Days listened to radio last week (15.7)
- Days read a newspaper last week (15.8)
- Indicator for has a favorite newspaper (15.12)
- Indicator for favorite newspaper is the *Daily Nation* (15.12)

#### 6.1.6 H4A6: POLITICAL KNOWLEDGE

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A6}$ .

- Indicator for can state the names of the Kenyan Vice-President, Prime Minister, Minister of Basic Education, Minister of Medical Services and the Presidents of Uganda, Tanzania and the United States of America. (15.16-15.22, each is a separate outcome).

#### 6.1.7 H4A7: SATISFACTION WITH THE GOVERNMENT

The following measures will be examined individually.

- Indicator for feels that passage of the 2010 constitutional referendum was good (15.15c)
- Indicator for satisfaction with the way democracy works in Kenya (15.25)

- Indicator for states that the Kenyan quality of governance is better than two years ago (15.34)
- Indicator for being satisfied or very satisfied with the way democracy works in Kenya (15.25)
- Indicator for agrees or strongly agrees with “we should show more respect for authority” (vs. “as citizens, we should be more active in questioning the actions of our leaders”) (15.43)

#### 6.1.8 H4A8: PARTICIPATION IN POLITICS

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A8}$ .

- Indicator for voted in the last presidential election in December, 2007, restricted to those of voting age in 2007 (15.15a)
- Indicator for voted in the 2010 constitutional referendum, restricted to those of voting age in 2010 (15.15b)
- Indicator for intend to vote in the next presidential election in 2013 (15.15d)
- Indicator for participated in political rallies (15.13a)
- Indicator for participated in demonstrations, mass actions or protests (15.13b)
- Indicator for participated in discussions with friends or family about political issues (15.13c)
- Indicator for participated in political campaigning activities (15.13d)

#### 6.1.9 H4A9: POLITICAL INTEREST AND SENSE OF POLITICAL EFFICACY

The following measures will be examined individually.

- Indicator for agrees or strongly agrees with “politics are very important to me” (15.24)
- Indicator for disagrees with "Politics and government sometimes seem so complicated that you can't really understand what's going on." (15.39)
- Indicator for disagrees or strongly disagrees with: "This world is run by a few people in power, and there is not much that someone like me can do about it." (15.26)

#### 6.1.10 H4A10: ATTITUDES TOWARD VIOLENCE

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4A9}$ .

- Indicator for agrees or strongly agrees with “Given the circumstances, the violence in Kenya after the December 2007 presidential election was justified.” (15.28)
- Indicator for agrees or strongly agrees with “In our country, it is sometimes necessary to use violence in support of a just cause” (vs. “The use of violence is never justified in politics”) (15.41)

#### 6.1.11 H4A11: TRUST

The following measure will be examined.

- Indicator for agrees or strongly agrees with “Generally speaking, would you say that most people can be trusted or that you need to be very careful in dealing with people?” (15.2)

### 6.2 H4B (H4B1-H4B5): TVVP AFFECTS INDIVIDUALS’ HUMAN CAPITAL AND OPINIONS AND

ATTITUDES ABOUT EDUCATION, BUSINESS AND RISK.

#### 6.2.1 H4B1. HUMAN CAPITAL AS MEASURED BY TESTS

The following measures will be examined individually, and then combined in the Summary Index

$Y_{4B1}$ .

- KLPS-3 math score (normalized to zero, standard deviation of one)
- KLPS-3 sentences score (normalized to zero, standard deviation of one)

#### 6.2.2 H4B2: PERCEPTIONS OF EDUCATION

The following measures will be examined individually, and then combined in the Summary Index

$Y_{4B2}$ .

- Indicator for agrees or strongly agrees with “Education helped/will help me to earn money.” (8.2.1)
- Indicator for disagrees or strongly disagrees with “If my child were offered a good job before completing primary school, I would let him/her take it” (8.2.3)
- Desires and expectations for children's schooling.
  - Highest level desired for children (8.2.5)
  - Highest level expected for children (8.2.6)

#### 6.2.3 H4B3: PERCEPTIONS OF VOCATIONAL TRAINING

The following measures will be examined individually:

- Vocational education attitudes.
  - Difference in perceived probability of employment between vocational education / not finishing secondary school and no vocational education / not finishing secondary school. (Q8.3.2 – Q8.3.1)

- Difference in wages if employed between vocational education / not finishing secondary school and no vocational education / not finishing secondary school. (Q8.3.2a – Q8.3.1a)
- Difference in perceived probability of employment between vocational education / not finishing secondary school and no vocational education / finishing secondary school. (Q8.3.2 – Q8.3.3)
- Difference in wages if employed between vocational education / not finishing secondary school and no vocational education / finishing secondary school. (Q8.3.2a – Q8.3.3a)
- Difference in perceived probability of employment if employed between no vocational education / finishing secondary school and no vocational education / not finishing secondary school. (Q8.3.3 – Q8.3.1)
- Difference in wages if employed between no vocational education / finishing secondary school and no vocational education / not finishing secondary school. (Q8.3.3a – Q8.3.1a)

#### 6.2.4 H4B4: ATTITUDES TOWARD ENTREPRENEURSHIP

The following measures will be examined individually, and then combined in the Summary Index

$Y_{4B4}$ .

- Indicator for agrees or strongly agrees with “Entrepreneurs create jobs.” (9.2.30a)
- Indicator for agrees or strongly agrees with “Entrepreneurs provide goods and services that people need.” (9.2.30b)
- Indicator for agrees or strongly agrees with “Kenya needs more entrepreneurs.” (9.2.30c)

- Indicator for disagrees or strongly disagrees with “Entrepreneurs do more harm than good.” (9.2.30d reversed)
- Indicator for agrees or strongly agrees with “Entrepreneurs are more efficient than the government.” (9.2.30e)
- Indicator for disagrees or strongly disagrees with “Entrepreneurs exploit poor workers.” (9.2.30f reversed)
- Indicator for agrees or strongly agrees with “Friends respect someone who started his or her own business.” (9.2.30g)

An additional related question will be examined, but not included in the above index:

- Indicator for stating "would like to start a business" (9.3.27) but cannot / have not because of a lack of skills or certificate.

#### 6.2.5 H4B5: RISK AVERSION

The following measure of risk aversion will be constructed.

- Risk aversion (Section 11.1): Create a measure taking on a value from 1 (risk loving) to 7 (extremely risk averse), as a function of which question the respondent chose “2=Lottery” over the certain amount (where “7” is the value for those respondents who choose 1=100 KSh in question 11.1.6).

### 6.3 H4C (H4C1-H4C3): TVVP AFFECTS OTHER LIFE OUTCOMES.

#### 6.3.1 H4C1: TIME USE

*For individuals selected for the E-module, individual regressions from the time-use section (section 2) for:*

- In the past 24 hours, hours spent in:
  - Farm work or fishing (E2 codes 22-24)
  - At work (E2 codes 25-27)
    - Light work (office, desk, light manual) (E2 codes 25-26)
    - Heavy manual (E2 code 27)
  - Household chores (E2 codes 7-13, 28)
  - Academic activities (study, attend class) (E2 code 16)
  - Social activities and leisure (E2 codes 6, 14-15, 17-18)
  - Travel (E2 codes 29-31)
  - Personal care (eat, sleep, bathe) (E2, codes 1-3)
  - Religious activity (E2, codes 4-5)

#### 6.3.2 H4C2: PHYSICAL HEALTH

The following measures will be examined individually, and then combined in the Summary Index  $Y_{4C2}$ .

- Self-reported general health, 5=“very good”, 4=“good”, 3=“fair”, 2=“poor”, 1=“very poor” (17.13 and 17.14)
- Blood Hemoglobin (Hb) level (19.8b).
- Body Mass Index (BMI) (19.5, 19.6)
- Hand strength test score (19.7).
- Work days lost to illness (in past four weeks, question 17.12, multiply by -1 for correct sign)

#### 6.3.3 H4C3: MARRIAGE AND FERTILITY

The following measures will be examined individually.

### *Full Sample*

- Indicator for ever having been married (18.1.1)
- Age at first marriage (18.1.3)
- Number of pregnancies (18.2.2)
- Age at first pregnancy (18.2.7)
- Educational level of spouse in years of schooling (18.1.14), if applicable

### *Conditional on being unmarried at the 2008 baseline survey:*

- Indicator for ever having been married (18.1.1)
- Age at first marriage (18.1.3)
- Number of pregnancies (18.2.2)
- Age at first pregnancy (18.2.7)
- Educational level of spouse in years of schooling (18.1.14), if applicable

### 6.3.4 H4C4: TRANSFERS

The following measures will be examined individually.

- Indicator for receiving a transfer from outside of household in last 12 months (12.10)
- Indicator for sending a transfer outside the household in last 12 months (12.11)

### *For individuals selected for the E-module, individual regressions for:*

- Total amount of transfers received by the household in last 12 months (3.6b)
- Total amount of transfers sent by the household in last 12 months (3.7b)

## **2. Interview & Tracking Information**

**Note to Field Officers:** Read the consent statement if it has not just been read.

**Read:** "Hello, I am [name] from ICS, in Busia Town. ICS would like to interview [focus respondent], to follow up on the effectiveness of the ICS education project that has been going on in their primary school in recent years. We are following up on pupils who were enrolled in this school in 2001, to help us better understand the long-term effects of ICS's work on improving education. We would like to ask these individuals detailed questions about themselves, their family members, and their community. All answers will be kept confidential. Do you have time to talk with me for about 90-100 minutes? We would appreciate your assistance in filling out the questionnaire, but participation is voluntary and there is no need to answer any question.

Because this is a follow-up survey, there will be no additional assistance as a result of this survey. ICS is not in a position to offer any support to this individual or to their school. If you wish to end the interview at any time, you may do so. If you have any questions, please contact the ICS Office in Busia town. May we have your permission to ask you some questions?"

**Field Officer: Initial to indicate respondent's acceptance:** \_\_\_\_\_

**Confirm the following information with the respondent:**

1. What is your current full name?

|\_\_\_\_\_| / |\_\_\_\_\_| / |\_\_\_\_\_|  
(Family name) (Name 1) (Name 2)

2. **If name is different from page 1:** Why is your name different than our records?

(Write response): \_\_\_\_\_

3. What is your date of birth?

|\_|\_| / |\_|\_| / |\_|\_|\_|\_|  
DD MM YYYY

**Note: The date of birth information is very important. Please probe deeply with the respondent if they claim to not know. Every respondent should be able to approximate the year of birth at least. If absolutely necessary, 99=DK Day or DK Month, and 9999 = DK year.**

4. What primary school did you attend in Term 1 of 2001? |\_\_\_\_\_|

**Check this school against our record on page 1, Q5.**

**Do not ask the following questions to the respondent. Simply record your impressions.**

5. Is the school listed in question 4 the same as the school listed on page 1, question 5? (1=Yes, 2=No) ☐

**If NO, reconfirm that you have the correct focus respondent and home.  
If YES, continue.**

6. Are you suspicious that this pupil is not the same pupil in a GSP school in 2001? ☐  
1 = Not at all suspicious      3 = Moderately Suspicious  
2 = A bit suspicious      4 = Very suspicious

6A. **If 2, 3, or 4 (suspicious):** Why? \_\_\_\_\_

**If VERY SUSPICIOUS, consider ending interview.**

7. How is this interview being conducted? ☐  
1 = In person, at home      3 = In person, elsewhere  
2 = In person, at school or work

7A. **If ELSEWHERE:** Where? \_\_\_\_\_

8. Is the interview being conducted with the interviewee alone (excepting ICS staff)? (1=Yes, 2=No) ☐

**If NO, politely ask to be allowed to interview the respondent alone. Stress that the interview is private and confidential. If the respondent is under 18, and a guardian insists on being present, that is okay, but please first ask to interview the student alone.**

**Read:** Now I would like to make certain that we have your current address information correct. We want to know the place that you usually sleep, not your ancestral lands or family home.

9. Country (1=Kenya, 2=Uganda, 3=Tanzania, 4=Other)

|\_\_|

9A. **If OTHER, write:** \_\_\_\_\_

10. District (1=Busia (K), 2=Teso, 3=Siaya, 4=Other)

2. Of these (**say number**) of brothers / sisters, how many are children of a step-mother? | |

**Ask:** Are there any other relatives that usually sleep or eat in your home that you have not counted? For instance, someone who normally lives here, but is away for a short time?

**If YES: Count these additional people and adjust the amount in question 1.**

**Ask:** Are there any other people who are not related to you that usually live and eat their meals together in your home? By this I mean any friends, tenants, servants or other people who are not relatives.

**If YES: Count these additional people and adjust the amount in question 1.**

**Ask:** Do any of the people you have counted have another permanent home?

**If YES:** Is the other permanent home their primary residence?

**If any person uses another home as their primary residence, erase these people from question 1.**

**Ask:** Do all of the people you have counted usually "eat from the same pot"?

**If NO, eliminate any people, such as extra mothers or wives or fathers, who do not normally reside and eat in the same dwelling as the respondent.**

**Read:** Now, for the remainder of this questionnaire, when we talk about your household, I mean only these (**say number**) people we have discussed.

## 8. Agricultural activities

**Read:** Now I'd like to ask you about the types of crops grown by YOUR HOUSEHOLD. By household I mean the people we discussed previously.

## 22. Conclusion

1. Thank you for your time. We are almost done. Before leaving, I just want to ask you about some of your classmates in primary school. As I explained, we are attempting to track down and interview students in your primary school and standard. We are having some difficulty, however, finding out the location of some of your classmates. Can you please tell me if you know any of these people, and if so, how we can contact them or their families?

**Using the unknown pupils sheet for this school and primary, read the names of unknown and missing pupils. If the respondent knows one of the pupils, revise the tracking information for that pupil– and make sure to get this data back to the office, in order to update the master tracking database ASAP. Please make a note if you believe that the information given to you is suspicious.**

### 2. Interview & Tracking Information

**Read:** Hello, I am [name] from IPA, in Busia Town. IPA is a new organization that was established by the research team who formerly worked with ICS on health and education projects. We would like to interview you, to follow up on the effectiveness of the ICS deworming project that went on in your primary school beginning in 1998. We are following up on pupils who were enrolled in classes 2 through 7 in 1998, to help us better understand the long-term effects of ICS's work on deworming and health. We would like to ask you detailed questions about yourself, your family members, and your community. All answers will be kept confidential. Because this is a follow-up survey, there will be no additional assistance as a result of this survey. Do you have time to talk with me for about one and a half to two hours? We would appreciate your assistance in filling out the questionnaire, but participation is voluntary and there is no need to answer any question.

If you wish to end the interview at any time, you may do so. If you have any questions, please contact the IPA Office in Busia town. May we have your permission to ask you some questions?

**Write your name to indicate respondent's acceptance:**

Hello, I am **[NAME]** from IPA, in (Busia Town / Nairobi). IPA is an organization that was established by the research team who formerly worked with ICS on health and education projects.

We would like to interview you, to follow up on the effectiveness of the ICS deworming project that went on in your primary school beginning in 1998. We are following up on pupils who were enrolled in classes 2 through 7 in 1998, to help us better understand the long-term effects of ICS's work on deworming and health. Also, since we first met when you were young, we would like to know more about how people in Kenya grow up and change in all the many aspects of their lives as they become adults. Therefore, we would like to ask you some questions about many different aspects of your life. We would like to ask you detailed questions about yourself, your family members, and your community. All answers will be kept as confidential as possible, and we do not anticipate any risks associated with participating in this survey. Any information that identifies you will be separated from your other answers, so that only our researchers will be able to track your answers back to you. We will never identify you in any report. Because this is a follow-up survey, there will be no additional assistance as a result of this survey. However, your responses will help us to determine the impact of deworming treatment programs on later-life outcomes. Furthermore, if you do decide to participate, we would like to offer you a small gift at the end of the survey. Do you have time to talk with me for about two and a half hours?

We would appreciate your assistance in filling out the questionnaire, but participation is voluntary and there is no need to answer any question. If you wish to end the interview at any time, you may do so. If you have any questions, please contact the IPA office. May we have your permission to ask you some questions?

#### **SECTION 4. Household Roster**

1a. **Do not ask the following question:** Is the FR currently in boarding school? **Recall that this information was collected at the start of Section 3.** (1=Yes, 2=No) ☐

**If YES, skip to Section 5. If NO, continue.**

1b. **Do NOT ask the following question:** Is the FR currently working as live-in house help or a live-in guard? **Recall that this information was collected at the start of Section 3.** (1=Yes, 2=No) ☐

**If NO, skip to the statement before question 2. If YES, continue.**

1c. Do you currently have a spouse or dependents living with you at your place of work? (1=Yes, 2=No) ☐

**If NO, skip to Section 5. If YES, continue.**

**Read:** Now I would like to find out about all of the individuals in your household. By your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or more in an average week sleeping in your home. **Note separate instructions in upcoming questions for FRs who are live-in house help or live-in guards.**

2. Let's first start with adults (individuals aged 18 or older). How many adults (other than yourself) are in your household, “eat from the same pot” and spend 4 nights or more in an average week sleeping in your home? **If the FR is live-in house help or a live-in guard and has a spouse or adult dependent(s) staying with them at the employer's house, only include these spouse/dependent(s) on the household roster (do not count their employer or the employer's family as part of the FR's household).** ☐

**If there are no adults in the household other than the FR, skip to question 10. If there is at least one adult in the household, other than the FR, proceed across each row and then down, collecting information on each adult. If there are more than 15 adults, collect information on the eldest 15.**

	3. First Name?	4. Did this person sleep here last night? (1=Yes, 2=No)  <b>If NO, probe:</b> “Does this person usually stay here for 4 or more days a week, and eat from the same pot?” <b>If NO, delete person from table.</b>	5. Sex? (1=Male, 2=Fem-ale)	6. Age in years?  <b>Prompt FR to estimate if unsure.</b>  (99=DK)	7. Relationship to respondent?  <b>Use G4 codes.</b>  <b>For example, if individual is FR’s father, select code for “father”.</b>	8. Highest level of education completed?  <b>Use G6 codes.</b> (99=DK)  <b>For those still in school, this is <u>not</u> current year. Prompt to estimate if unsure.</b>	9. 15. In the last seven days, how many hours have you spent doing household chores for your household? **Prompt: Household chores include activities such as cleaning, dusting, sweeping, washing dishes or clothes, ironing, collecting water, slashing, etc. Do not include time spent on childcare.** |\_\_| hours

16. In total, how many people have performed household chores for your household over the last seven days? **Include both household members and non-household members, and the FR, if applicable. Recall that FRs who are in boarding school should be considered a 1-person household for this question and the remaining questions in this section. FRs who are live-in house help or live-in guards should be considered 1-person households unless they have a spouse or dependent living with them (in which case you should include these individuals as well).** |\_\_|

**If the responses to questions 15 and 16 are BOTH ZERO, skip to Section 7.1. Otherwise, continue.**

17. In the last seven days, how many hours did members of your household – not including you – spend doing household chores for your household? **Include anyone who lives in the household, “eats from the same pot” and spends 4 nights or more in an average week sleeping in your home even if they are live-in domestic help. Recall that FRs in boarding school should be considered 1-person households. FRs who are live-in house help or live-in guards should be considered 1-person households also unless they have a spouse or dependent living with them (in which case you should include these individuals as well). If the FR lives alone, list “0”.**

18. In the last seven days, how many hours did workers from outside the household (such as hired maids who do not live with you) spend doing household chores? |\_\_| hours

**If ZERO, skip to Section 7.1. Otherwise, continue.**

19. In the last seven days, how much have you spent in total (including cash and in-kind payments) on people from outside the household assisting with household chores? **If payment is in kind, ask to estimate in shillings.** Amount (99=DK): |\_\_\_\_|

Currency if NOT Kenyan shillings (**use G12 codes**): |\_\_| Other: \_\_\_\_\_

## **SECTION 7.1. Sentence Reading**

**Read:** For this part of the survey, I am going to ask you to answer some questions about reading and arithmetic. **Show the FR the example sentences on the exam.**

**Read:** This paper has a list of sentences. Some of the statements are TRUE and some are FALSE. You are required to read them as fast as possible. If the statement is TRUE, mark (✓) inside the box. If the sentence is FALSE, mark (X) inside the box.

**Read:** Let's work on an example together. Please read the first statement.

**Example:** Pupils will read the first statement, which is TRUE. Then the investigator will show that the mark (✓) should be put for TRUE sentences. Pupils will read the second sentence, which is FALSE. The investigator will show that the mark (X) should be put for FALSE sentences. Pupils will read the third FALSE statement. They will be asked which mark is to be indicated inside the box (X). Pupils will read the fourth TRUE sentence. They will be asked which mark is to be indicated inside the box (✓).

**Make sure FR understands the exercise before proceeding.**

**Read:** This exercise will be timed. You will have 4 minutes to complete as many sentences as you can. We do not expect you to finish all of them, so do not feel upset if you do not complete the exercise. Are you ready to begin?

1. **Do not ask the following question. Simply record your impressions.** Does the FR refuse to participate in the sentence reading test? (1=Yes, 2=No) |\_\_\_|

**If NO, skip to "TEST INSTRUCTIONS". If YES, continue.**

1a. **Do not ask the following question, simply record your impressions.** Why does FR refuse to participate in the test?

---

**Now fill out the "Survey Refusal Sheet" and skip to Section 7.2.**

**TEST INSTRUCTIONS:** Fill out box on the first (introductory) page of the "Sentence Reading" exam. Then, give test to FR and start timer. When timer goes off, collect test from FR and place in manila envelope of information to enter back at office.

2. **Do not ask the following questions. Simply record your impressions.** Was there any disturbance during the performance of the test? **Include presence of other people or if test takes place in a noisy area.** (1= Yes, 2= No) |\_\_\_|

2a. **If YES:** Describe disturbance. \_\_\_\_\_

## **SECTION 7.2. Arithmetic**

**Read:** This is a mathematics test that I would like you to undertake. The test consists of addition, subtraction, multiplication and division questions.

**Make sure FR understands the exercise.**

**Read:** I would like you to attempt all questions starting with the addition questions. If you cannot answer a question, leave it and continue with the following question. You will have 10 minutes to complete as many questions as you can. We do not expect you to finish all of them, so do not feel upset if you do not complete the entire sheet. Are you ready to begin?

1. **Do not ask the following question, simply record your impressions.** Does the FR refuse to participate in the arithmetic test? (1=Yes, 2=No) ☐

**If NO, skip to TEST INSTRUCTIONS. If YES, continue.**

1a. **Do not ask the following question, simply record your impressions.** Why does FR refuse to participate in the test?

---

---

**Now fill out the “Survey Refusal Sheet” and skip to Section 7.3.**

**TEST INSTRUCTIONS:** Fill out box on the first (introductory) page of the “Math Test”. Then, give test to FR and start timer. When timer goes off, collect test from FR and place in manila envelope of information to enter back at office.

2. **While the respondent is taking the Math Test, this may be a good time to take a GPS reading outside. Do not ask the following questions, simply record your impressions.**

2a. Is this interview being performed at the respondent’s current residence, place of work, or school? (1=Yes, 2=No) ☐

**If YES, continue. If NO, skip to question 3.**

2b. Is this a good time to take a GPS reading? **When answering this question, take into consideration the safety of the area you are in, and what protocol dictates you should do with your netbook while you are taking the GPS reading.**

(1=Yes, 2=No) ☐

**If YES, continue. If NO, skip to question 3.**

2c. Record the GPS reading here.

(i) Elevation m

(ii) N / S (Circle one) °.

(iii) E / W (Circle one) °.

3. **Do not ask the following questions. Simply record your impressions.** Was there any disturbance during the performance of the test? **Include presence of other people or if test takes place in a noisy area.** (1= Yes, 2= No) ☐

3a. **If YES:** Describe disturbance.

### SECTION 7.3. Raven's Tests

**A. Do not ask the following question, simply record your impressions.** Was the respondent surveyed in KLPS Round 2 (this information is in the Other Info section of the Tracking Sheet)?  
(1=Yes, 2=No)    ☐

**If YES, skip to Section 8.1. If NO, continue to administer test.**

**Read:** And now for the last short test I would like to give you. Here is a pattern with a piece missing. Below are six pieces, choose the one that completes the pattern.

Test A		Correct?
1 (ex)	(1) (2) (3) <b>(4)</b> (5) (6)	Don't count

13. **Do not ask the following question. Simply record your impressions.** Was there any disturbance during the performance of the tests? **Include presence of other people or if test takes place in a noisy area.** (1= Yes, 2= No)    ☐

13a. **If YES:** Describe disturbance. \_\_\_\_\_

-----**BREAK**-----

**At this time, give the FR a five minute break, along with a snack.**

## SECTION 8.1. Schooling History

A. **Do not ask the following question to the FR.** What was the last year we interviewed this respondent? ***This information can be found in the OTHER INFO section of the TRACKING SHEET.*** |\_|\_|\_|\_| (YYYY)

**Collect information on every year starting with the last year this respondent was surveyed (question A). Include ALL schooling in this table, whether primary, secondary, college or bible school, vocational training, or university.**

## **SECTION 11.2. Ambiguity Question**

**Read:** Imagine you are going to play a game where you draw a ball out of a bag without looking. We have two bags, with 10 balls each.

**Show visual aid to help clarify the choice.**

Look at this diagram:

In bag 1, out of 10 balls there are 4 red balls and 6 yellow balls.

In bag 2, there are also 10 balls, but the number of red and yellow balls is unknown.

You can choose a bag from which you want to draw the ball.

If you choose bag 1, to win 50 shillings you need to draw a red ball.

If you choose bag 2, to win 50 shillings you need to decide a color and draw a ball of that color.

Which bag would you like to choose from? (1 = Bag 1, 2 = Bag 2) |\_\_\_\_|

## **SECTION 12. Migration**

1. **Do not ask the following question to the FR.** What was the last year we interviewed this respondent? *This information can be found in the OTHER INFO section of the TRACKING SHEET.* |\_\_|\_\_|\_\_|\_\_|

For FRs who are live-in house help or live-in guards, ask them how long they will remain living at their employer’s home.***

**Read:** Now, I would like to ask you about relationships in which your household either receives or gives money or goods.

**Please probe well on this next question. We want ALL transfers, not just gifts.**

10. Did anyone in this household receive a gift / assistance of money or goods from someone outside the household in the last 12 months?  
***Do not include transfers from the government or employers; also do not include loans or interest payments, or goods that the household purchased. If FR is in boarding school, count gifts from parents as transfers. Remember: Boarding school students are a 1-person household, and therefore classmates are not part of the household. FRs who work as live-in house help or live-guards are also a 1-person household, unless their spouse or dependent is living with them at their employer’s home. For spouses/dependents of the FR that are living elsewhere (not at workplace of FR), any gifts sent to the FR should be counted as transfers.***

7b. IDENTIFICATION NUMBER OF DYNAMOMETER:

**Read:** As we mentioned before, one purpose of this survey is to understand how people in Kenya grow up and change in all the many aspects of their lives as they become adults. One of these aspects is health, and so now I would like to test you for anemia by measuring your hemoglobin level.

I have been trained by laboratory technicians at the **[insert name of training site]** to perform this test. I will take a drop of blood from a finger and test this blood in a HemoCue machine. The test uses disposable sterile instruments that are clean and completely safe. When I prick your finger to get a few drops of blood, you will feel it. Some people fear it very much, but pricking a finger is a common procedure that is done even with small children. The pain is very minor. The blood will be tested with the new equipment and, if you decide you want to know the result of the test, it will be given to you immediately. The pricking takes less than one second.

You will receive no additional assistance as a direct result of participating in this testing, although if we find out that you have severe anemia, you will be referred to a local health centre. As with the information you have already given me, the results of this test will remain as confidential as possible, and will not be shared with anyone but you. Any information that identifies you will be separated from your test results, so that only our researchers will be able to track your result back to you. We will never identify you in any report.

8a. Do you agree to participate in the anemia testing? **Write your name to indicate respondent's acceptance:** \_\_\_\_\_  
**If FR consents, continue to 8b. If NO: DO NOT ASK ALOUD. Record the reason why you were unable to conduct the HB test on the respondent:**

Hello, I am [name] from IPA, in (Busia Town / Nairobi). IPA is an organization that was established by the research team who formerly worked with ICS on health and education projects.

We recently conducted an interview with you, and would now like to acquire more information, particularly information related to your household's finances and expenditures. This additional information will help us further follow up on the effectiveness of the ICS deworming project that went on in your primary school beginning in 1998. As we told you in the first interview, we are following up on pupils who were enrolled in classes 2 through 7 in 1998, to help us better understand the long-term effects of ICS's work on deworming and health. Also, since we first met when you were young, we would like to know more about how people in Kenya grow up and change in all the many aspects of their lives as they become adults. Therefore, we would like to again ask you some questions about many different aspects of your life. We would like to ask you detailed questions about yourself and your family members. There will also be a section on your health, including past and present sexual behavior, but you do not have to answer any questions that make you feel uncomfortable. All answers will be kept as confidential as possible, and we do not anticipate any risks associated with participating in this survey. Any information that identifies you will be separated from your other answers, so that only our researchers will be able to track your answers back to you. We will never identify you in any report. Because this is a follow-up survey, there will be no additional assistance as a result of this survey. However, your responses will help us to determine the impact of deworming treatment programs on later-life outcomes. Furthermore, if you do decide to participate, we would like to offer you a small gift at the end of the survey. Do you have time to talk with me for approximately two and a half hours?

We would appreciate your assistance in filling out the questionnaire, but participation is voluntary and there is no need to answer any question. If you wish to end the interview at any time, you may do so. If you have any questions, please contact the IPA Office. May we have your permission to ask you some questions?

#### **SECTION 4. Interaction with Other NGOs and Government Programs**

**Read:** We would now like to learn if you have recently benefitted from any NGO, CBO, church or government assistance programs. Specifically, we want to learn about assistance programs where you have received a good or service directly. By assistance program, I mean any program, including things like receiving food, medication, bednets, condoms, fertilizer, chlorine, education or training, agricultural extension services, healthcare, or money for a specific purpose. **Do not include the IPA vocational training project here, but do include other ICS/IPA programs.**

**Here we want programs in which the FR received something directly, such as money, food, extension services, or a job. We do not want to include Free Primary Education, or education subsidies that go directly to the school and not to the individual. If there are more than 7 programs, collect information on the 7 most recent programs.**

## **SECTION 6. Sexual Behavior Questionnaire**

**Read:** This section of the survey covers topics related to sexual behavior. These topics include your past and current sexual partners, HIV and other sexually transmitted infections, and the use of contraceptives to avoid pregnancy.

As we mentioned before, one purpose of this survey is to understand how people in Kenya grow up and change in all the many aspects of their lives as they become adults. One of these aspects is health. Because HIV and other sexually transmitted infections are important health issues in Kenya, we would like to ask you some questions about this topic.

To ensure your privacy and confidentiality in responding to these very personal questions, I will have you read and answer the sexual behavior questions, which are available in both English and Kiswahili, to yourself. You will have to mark the boxes that are correct on the answer sheet. When you finish filling out the question sheet, you will fold it and place it in a sealed envelope.

If you would prefer, I can also read the questions aloud. If you choose to read the questions silently yourself, I am available to clarify anything you don't understand.

Please answer accurately and do not worry about whether there is a correct answer. Your answers will have no effect on your personal life. As I mentioned, this information is confidential, only the researchers can access the data. Thank you for your cooperation.

1. Will you answer these questions? (1=Yes, 2=No) ☐

***If YES, hand FR the questionnaire to fill out and skip to question 2. If NO, continue.***

1a. ***Do not ask the following question, simply record your impressions.*** Why does FR refuse to fill out the questionnaire? \_\_\_\_\_

---

***Now fill out the "Survey Refusal Sheet" and skip to Section 7 after the 5 min break.***

2. ***Do not ask this question out loud.*** Did the respondent answer the sexual behavior questionnaire himself / herself? (1=Yes, 2=No) ☐

**5 MINUTE BREAK AFTER THIS SECTION.**

**REMEMBER TO PLACE THE COMPLETED SECTION IN A SEALED ENVELOPE AND FOLLOW ALL APPROPRIATE PROTOCOL TO MAINTAIN CONFIDENTIALITY AND COMPLY WITH HUMAN SUBJECT RULES.**

**For the following sections 7 – 13, you may want to consult other household members and ask them to join the interview.**

## **SECTION 7. Transfers**

**Read:** Now, I would like to ask you about relationships in which your household either receives or gives money or goods. By your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

**If FR is in boarding school, read:** We consider boarding school students to be a 1-person household, therefore classmates and parents should not be included as part of your household.

**If FR is a live-in guard or live-in house help, read:** We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

**Please probe well on this next question. We want ALL transfers, not just gifts.**

1. Did anyone in this household receive a gift / assistance of money or goods from someone outside the household in the last 12 months? **Do not include transfers from the government or employers; also do not include loans or interest payments, or goods that the household purchased. If FR is in boarding school count gifts from parents as transfers.**

(1=Yes, 2= No)                      |\_\_|

**If YES, continue. If NO, skip to question 10.**

**For the next set of questions, please group together transfers that come from the same sender (or individuals in the same household) and are meant for the same receiver, in one “transfer relationship.” If there are more than 4 transfer relationships, list only the ones that provided the largest amount of money or goods.**

**Read:** Consider the [1<sup>st</sup> / 2<sup>nd</sup> / 3<sup>rd</sup> / ...] relationship in which your household received a gift of money or goods from someone outside the household in the past 12 months. **Fill in the table by proceeding across for question 2 and then down each column.**

19. How many additional friends or relatives asked you for money in the last 12 months, that you did NOT send money to? |\_| individuals

## SECTION 8. Economic Activities

**Note: We are interested in livestock this household owns, plus any livestock the respondent owns that is at another location.**

**Read:** For the following questions on expenditures, I would like you to consider expenditures for your household as a whole. Recall that, by your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

**If FR is in boarding school, read:** We consider boarding school students to be a 1-person household, therefore classmates should not be included as part of your household.

**If FR is a live-in guard or live-in house help, read:** We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

**Note that we will use this household definition for all of the questions in the remainder of this survey.**

1. How many [LIVESTOCK] did your household purchase in the past 12 months? How much money in total did your household pay for those [LIVESTOCK]? **Ask each individually.**

## SECTION 9. Durables

**NOTE: For the following sections 9 – 13: If the FR is a boarding school student and the ITEM (e.g. food, medicine, lamps) is already included in the tuition paid, DO NOT record it. However, if the ITEM is an additional out-of-pocket payment the FR made, record the ITEM. Purchases that are made by the boarding school (e.g. a TV) SHOULD NOT be listed.**

### **Read:**

Hello, I am **[Name]** from IPA, a research and development organization in **[Busia Town / Nairobi]**. We are contacting you because you applied to receive a vocational training voucher from us back in 2008. We would like to speak with you for about 90 minutes, to ask you some questions about yourself and your life since you applied to that program. All information I receive from you today will be kept as confidential as possible, and we do not anticipate any risks associated with participating in this survey. Any information that identifies you will be separated from your other answers, so that only our researchers will be able to track your answers back to you. We will never identify you in any report. Because this is a follow-up survey, there will be no additional assistance as a result of this survey. However, your responses will help us to determine the impact of programs to support youth on their life outcomes.

We would appreciate your assistance in filling out the questionnaire, but participation is voluntary and there is no need to answer any question. If you wish to end the interview at any time, you may do so. If you choose to participate in this program, you will receive a small gift for agreeing to talk to us for about 90 minutes today. If you have any questions, please contact the IPA office. May we have your permission to speak with you?

10. **Write your name to indicate FR's acceptance:**

11. **Do not ask the following question. Simply record your impressions.** Is the respondent able to proceed with the survey? (1=Yes-FR agrees to participate; 2=No-FR refuses to participate; 3=No-FR does not refuse but is unable to participate)

7. In the future, we may want to contact you by email. Do you have an e-mail address?

(1=Yes, 2=No) |\_\_\_|

7a. **If yes:** What is it? **Write.** \_\_\_\_\_

**Read:** In case you are not at your current address, please tell us the name of a friend or family member who is sure to know where you are, and how to contact you. This should be a friend or family member that would stay in their current residence if you moved away. We would prefer to get information on a contact who has a working mobile phone number.

**Ask first if FR has a contact with phones who would know how to locate and contact the FR. If NOT, contact without phones who know how to locate and contact FR are OK. Contacts should usually not be husbands, wives or children (but other relatives will often make good contacts), since these contacts often move along with the FR. We want contacts that are likely to stay in the same place when the FR moves.**

## SECTION 6. Assets

**Read:** For the following questions on expenditures, I would like you to consider expenditures for your household as a whole. Recall that, by your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

**If FR is in boarding school, read:** We consider boarding school students to be a 1-person household, therefore classmates should not be included as part of your household.

**If FR is a live-in guard or live-in house help, read:** We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

**Note that we will use this household definition for all of the questions in the remainder of this survey.**

## **SECTION 10. Transfers**

**Read:** Now I would like to ask you some questions about your health and nutrition.

**Read:** Now, I would like to ask you about relationships in which your household either receives or gives money or goods. By your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

**If FR is in boarding school, read:** We consider boarding school students to be a 1-person household, therefore classmates and parents should not be included as part of your household.

**If FR is a live-in guard or live-in house help, read:** We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

**Please probe well on this next question. We want ALL transfers, not just gifts.**

1. Did anyone in this household receive a gift / assistance of money or goods from someone outside the household in the last 12 months?

**Do not include transfers from the government or employers; also do not include loans or interest payments, or goods that the household purchased. If FR is in boarding school count gifts from parents as transfers.**

(1=Yes, 2= No)

|\_\_|

**If YES, continue. If NO, skip to question 9.**

**For the next set of questions, please group together transfers that come from the same sender (or individuals in the same household) and are meant for the same receiver, in one “transfer relationship.” If there are more than 4 transfer relationships, list only the ones that provided the largest amount of money or goods.**

**Read:** Consider the [1<sup>st</sup> / 2<sup>nd</sup> / 3<sup>rd</sup> / ...] relationship in which your household received a gift of money or goods from someone outside the household in the past 12 months. **Fill in the table by proceeding across for question 2 and then down each column.**

6. To your knowledge, have you or anyone in your household <u>ever</u> given this person a transfer in the past? (1=Yes, 2=No) <b>Only use 99=DK if FR feels they would not be aware of any transfers made. If they would be aware but haven't heard of any transfers, that's a NO.</b>	____	____	____	____

**If ANOTHER TRANSFER was entered, return to question 3 and fill in the next column. If NOT, continue.**

**If MORE THAN 4 RECEIVING TRANSFER RELATIONSHIPS, continue to question 7. OTHERWISE, skip to question 8.**

7. How many total individuals or groups of individuals did you and your household receive money from in the last 12 months? **Note that we want the total number of transfer relationships here, not the number of people (i.e., if the FR received money from an aunt and uncle who live together in the same household, that counts as 1 relationship rather than 2 relationships).** \_\_\_\_ individuals or groups

8. What is the total amount (including all cash transfers and the total value of transferred goods) that your household received from persons outside the household during the past 12 months, including the transfers above as well as any other transfers?

### **Read:**

Hello, I am [NAME] from IPA, in [Busia Town / Nairobi]. Innovations for Poverty Action is a nonprofit that seeks to perform research to discover and promote effective solutions to global poverty.

We would like to interview you to follow up on the effectiveness of the IPA vocational training program that you applied to in 2008. We are following up on all individuals who applied to this program, to help us better understand the long-term effects of IPA's work on supporting youth. Also, since we first met when you were young, we would like to know more about how people in Kenya grow up and change in all the many aspects of their lives as they become adults. Therefore, we would like to ask you some questions about many different aspects of your life. We would like to ask you detailed questions about yourself, your family members, and your community. We expect this survey will take less than three hours.

All answers will be kept as confidential as possible, and we do not anticipate any risks associated with participating in this survey. Any information that identifies you will be separated from your other answers, so that only our researchers will be able to track your answers back to you. We will never identify you in any report. Because this is a follow-up survey, there will be no additional assistance as a result of this survey. However, your responses will help us to determine the impact of IPA's support for youth on later-life outcomes.

We would appreciate your assistance in filling out the questionnaire, but participation is voluntary and there is no need to answer any question. If you wish to end the interview at any time, you may do so. If you do decide to participate, we would like to offer you a small gift at the end of the survey. If you have any questions or concerns you may ask me now, or you can contact Esther Isokat at the IPA office in Busia Town at 0707096220 / 0721990839. She can put you in touch with Edward Miguel at the University of California, who is in charge of the research project. I will also give you a business card at the end of this interview with the contact information of Esther who is the Project Manager for this study.

11. May we have your permission to ask you some questions? (1=Yes, 2=No) ☐

12. ***Is the respondent able to proceed with the survey?*** (1=Yes-FR agrees to participate; 2=No-FR refuses to participate; 3=No-FR does not refuse but is unable to participate) ☐

Why is this not the same name we have in our records? **List up to 2 responses.** (1= Got married and took spouse's name; 2= Took the name of another family member (not spouse); 3= Took baptismal name; 4= Took a different / additional name (not family or baptismal name); 5= Dropped Family Name; 6=Name previously misspelled; 10= Other (specify) , 99=DK) /  Other:

**6. Count the number of "2"s in questions 1a, 2a, 3a, and 4a, and 5a, and record that number here. Note: These 5 boxes are highlighted above so they are easy to find.**

**If the number listed in question 6 is less than or equal to 1, continue. If the number is greater than 1, reconfirm that you have the correct focus respondent before proceeding.**

**7. Are you suspicious that this pupil is not the same pupil that we are looking for?**

1 = Not at all suspicious      3 = Moderately Suspicious  
2 = A bit suspicious      4 = Very suspicious

**7a. If 2, 3, or 4 (suspicious): Why?**

**If VERY SUSPICIOUS, consider ending interview.**

**8. We would like to collect just a bit of information on the respondent's demeanor at the start of the interview. Please record your impressions.**

**8a. Did the respondent greet you in a polite way?** (1=Yes, 2=No/did not greet you)

**8b. Did the respondent make eye contact with you (at all) during these initial questions?**  
(1=Yes, 2=No)

**8c. Has the respondent smiled at you?** (1=Yes, 2=No)

**9. Where is this interview being conducted?**

**If you are interviewing an FR who works as live-in house help or a live-in guard and you are at their place of work, please select place of work and not current residence. If you are interviewing them at their home (not the home they work in), select appropriate home.**

1 = In person, at current residence (may also be biological or marital home)  
2 = In person, at biological home (not current residence)  
3 = In person, at marital home (not current residence)  
4 = In person, at the FR's school (specify, **use E1 codes**)  Other:

## SECTION 4. Household Roster

1a. Is the FR currently in boarding school? Recall this information was collected at the start of Section 3. (1=Yes, 2=No)   
If YES, skip to Section 5. If NO, continue.

1b. Is the FR currently working as live-in house help or a live-in guard? Recall this information was collected at the start of Section 3. (1=Yes, 2=No)   
If NO, skip to the statement before question 2. If YES, continue.

1c. Do you currently have a spouse or dependents living with you at your place of work? (1=Yes, 2=No)   
If NO, skip to Section 5. If YES, continue.

**Read:** Now we would like to find out about all of the individuals in your household. By your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or more in an average week sleeping in your home. **Note separate instructions in upcoming questions for FRs who are live-in house help or live-in guards.**

2. Let’s first start with adults (individuals aged 18 or older). How many adults (other than yourself) are in your household, “eat from the same pot” and spend 4 nights or more in an average week sleeping in your home? **If the FR is live-in house help or a live-in guard and has a spouse or adult dependent(s) staying with them at the employer’s house, only include these spouse/dependent(s) on the household roster (do not count their employer or the employer’s family as part of the FR’s household). If FR has a live-in house help or a live-in guard, count the live-in house help or live-in guard as part of the FR’s household.**

**If there are no adults in the household other than the FR, skip to question 10. If there is at least one adult in the household, other than the FR, proceed across each row and then down, collecting information on each adult. If there are more than 15 adults, collect information on the eldest 15.**

	3. First Name?	4. Did this person sleep here last night? ## Section 5. Transfers

**Read:** For the next several questions, we will be talking about household finances and spending. You may want to consult other household members and ask them to join the interview. Please feel free to do so if you like.

**Read:** Now, I would like to ask you about relationships in which your household either receives or gives money or goods. By your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

**If FR is in boarding school, read:** We consider boarding school students to be a 1-person household, therefore classmates and parents should not be included as part of your household.

**If FR is a live-in guard or live-in house help, read:** We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

**Please probe well on this next question. We want ALL transfers, not just gifts.**

1. Did anyone in this household receive a gift / assistance of money or goods from someone outside the household in the last 12 months?

Please do not include loans, as we will discuss those later. **Do not include transfers from the government or employers; also do not include loans or interest payments, or goods that the household purchased. If FR is in boarding school count gifts from parents as transfers.**

(1=Yes, 2= No, 99=DK)

**If YES, continue. If NO or DK, skip to question 11.**

**For the next set of questions, please group together transfers that come from the same sender (or individuals in the same household) and are meant for the same receiver, in one “transfer relationship.” If there are more than 4 transfer relationships, list only the ones that provided the largest amount of money or goods.**

**Read:** Consider the [1<sup>st</sup> / 2<sup>nd</sup> / 3<sup>rd</sup> / ...] relationship in which your household received a gift of money or goods from someone outside the household in the past 12 months. **Fill in the table by proceeding down each column.**

## SECTION 7. Schooling and Training

IF ANY OTHER INDIVIDUALS WERE HELPING THE FR RESPOND TO EARLIER SECTIONS, READ: Thank you for your help in answering these questions. Now I would like to talk to the respondent alone, to ask him/her questions about his/her own life. WAIT UNTIL OTHERS HAVE LEFT EARSHOT TO CONTINUE THE SURVEY.

**FOR ALL, READ: "Now we would like to talk to you about your education and training."**

1. Are you currently enrolled in school, college, university, or vocational training?  
(1=Yes-school, college, or university; 2=Yes-vocational training, 3=No) |\_|\_|
2. What is the highest level of education you have attended, not including vocational training? ***This should be primary, secondary, college, bible, or university. After FR responds, prompt for the next highest level to check. Use G6 codes.*** (999=DK) |\_|\_|  
***If "100/200", skip to question 4.***
3. In what year did you last attend this level of schooling? (9999=DK) (YYYY) |\_|\_|\_|\_|
4. Have you ever obtained any vocational training, either at a public school, a private school, an internship, or any other informal training?  
***If NO or DK, skip to Section 8.1. If YES, continue.*** (1=Yes, 2=No, 99=DK) |\_|\_|

**Read:** Let's talk more about your training, starting with the first one you received. **Proceed across the first row.**

	5. In what discipline was this training? <b>Use E2 codes.</b> (9999=DK)	6. Where did this training take place? 1=at a government school, 2=at a private school, 3=at a shop, 4=other (spec), 99=DK	7. **If YES, continue to next row, prompting for the next training received. If NO, skip to Section 8.1.**

## SECTION 8.1. Farming and Agriculture

**Read:** We would now like to discuss the agricultural or pastoral activities that you and other members of your household perform.

1. Do members of your household perform any agricultural or pastoralist activities for yourselves? (1=Yes, 2=No)

**Recall that FRs in boarding school count as a 1-person household. Live-in house help and live-in guards count as 1-person households unless they have a spouse or dependents living with them (in which case those individuals should also be included).**

**Fish ponds count. However, lake and river fishing are either a business (Sec. 8.2) or a job (Sec. 8.3).**

**If YES, proceed to question 2. If NO, skip to Section 8.2.**

**Fill in the table by proceeding across for question 2, then down each column.**

## **SECTION 11. Fertility**

***Please ensure the privacy of the FR for this section. If there are individuals within earshot who appear to be over age 5, please ask to speak with the FR privately.***

***Read:*** Now I would like to ask you some questions about your fertility and any children you might have. Please remember that this survey is confidential and that the information will be used for research purposes only. Also, I understand it may be difficult or upsetting to talk about, but please remember to include pregnancies that did not end in live birth.

1. ***For male FRs:*** Has a sexual partner of yours ever been pregnant with your child (including pregnancies that are current or ended in stillbirth, miscarriage or abortion)?

***For female FRs:*** Have you ever been pregnant (including pregnancies that are current or ended in stillbirth, miscarriage or abortion)?  
(1=Yes, 2=No, 99=DK)

***If YES, continue. If NO or DK, skip to Section 12.***

2. ***For male FRs:*** How many times has a sexual partner of yours been pregnant with your child (including pregnancies that are current or ended in stillbirth, miscarriage or abortion)?

***For female FRs:*** How many times have you been pregnant (including pregnancies that are current or ended in stillbirth, miscarriage or abortion)?  
(99=DK)

***If FR claims to DK, try to prompt them for how many pregnancies they do know about.***

***Check the tracking sheet for the “YEAR OF KLPS-3 INTERVIEW”, which is the year we collected detailed information on children of this individual. If year=8888 (never), continue. Otherwise, skip to question 3. If they insist that they do not know, skip to Question 30.***

***Read:*** Let's discuss these pregnancies, starting with the first one. ***Skip to table below.***

3. ***For male FRs:*** Now let's focus on a shorter timeframe. Since January ***[year of KLPS-3 interview]***, how many times has a sexual partner of yours been pregnant with your child (including pregnancies that are current or ended in stillbirth, miscarriage or abortion)?

***For female FRs:*** Now let's focus on a shorter timeframe. Since January ***[year of KLPS-3 interview]***, how many times have you been pregnant (including pregnancies that are current or ended in stillbirth, miscarriage or abortion)?  
(99=DK)

***If FR claims to DK, try to prompt them for how many pregnancies they do know about. If they insist that they do not know, skip to Question 30.***

***Read:*** Let's discuss these recent pregnancies, starting with the first one since January ***[year of KLPS-3 interview]***.

49. In the last seven days, how many hours have you spent doing household chores for your household? **Prompt: Household chores include activities such as cleaning, dusting, sweeping, washing dishes or clothes, ironing, collecting water, slashing, etc. Do not include time spent on childcare.** (999=DK) |\_\_\_\_| hours

50. In total, how many people have performed household chores for your household over the last seven days? **Include both household members and non-household members, and the FR, if applicable. Recall that FRs who are in boarding school should be considered a 1-person household for this question and the remaining questions in this section. FRs who are live-in house help or live-in guards should be considered 1-person households unless they have a spouse or dependent living with them (in which case you should include these individuals as well).** (9999=DK) |\_\_\_\_|

**If the responses to questions 49 and 50 are BOTH ZERO, skip to Section 17. Otherwise, continue.**

51. In the last seven days, how many hours did members of your household – not including you – spend doing household chores for your household? **Include anyone who lives in the household, “eats from the same pot” and spends 4 nights or more in an average week sleeping in your home even if they are live-in domestic help. Recall that FRs in boarding school should be considered 1-person households. FRs who are live-in house help or live-in guards should be considered 1-person households also unless they have a spouse or dependent living with them (in which case you should include these individuals as well). If the FR lives alone, list “0”.** (9999=DK) |\_\_\_\_| hours

52. In the last seven days, how many hours did workers from outside the household (such as hired maids who do not live with you) spend doing household chores? (9999=DK) |\_\_\_\_| hours  
**If ZERO, skip to Section 17. Otherwise, continue.**

53. In the last seven days, how much have you spent in total (including cash and in-kind payments) on people from outside the household assisting with household chores? **If payment is in kind, ask to estimate in shillings.** (9999=DK) |\_\_\_\_| Ksh

**Currency if NOT Kenyan shillings (use G12 codes): |\_\_\_\_| Other: \_\_\_\_\_**
