Summary: This document outlines the plan for analyzing the 20-year consumption and labor market impacts of a randomized school deworming program in western Kenya using data from the Kenya Life Panel Survey (KLPS). This analysis builds on that of Baird et al. (2016), which analyzed the 10-year program impacts, in two important ways. First, it utilizes two more rounds of data (KLPS-3 and KLPS-4), which include improved measures of consumption, agricultural productivity, and household earnings. Second, the additional rounds of data allow for panel data analysis.

The third round of the Kenya Life Panel Survey (KLPS-3) was conducted during 2011-2014, and the fourth round of the survey (KLPS-4) launched in mid-2017 and is currently ongoing. KLPS-3 built on KLPS-2 by including a more detailed measure of subsistence agricultural productivity, as well as collecting consumption expenditure information for a representative subset of respondents. KLPS-4 improves the data further by including a more detailed agricultural productivity measure, measuring consumption expenditures for the full sample of respondents, and gathering information on the earnings of other household members.

The analysis outlined here will be split into five groups of outcomes: (1) consumption, (2) wealth, (3) earnings, (4) labor supply, and (5) occupational choice. Analysis will be conducted by pooling data across KLPS rounds, and by studying the evolution of impacts over time. This document lays out the main regression specifications and outcome variable definitions that are intended for use for the 20-year impacts analysis on these five groups of outcomes. The two primary outcomes are aggregate per capita consumption and total respondent earnings. Additional analyses will be carried out beyond those included in this document; this document is therefore not meant to be comprehensive or to preclude additional analyses.

The survey currently in the field in Kenya is called the KLPS-4 E+ module. We intend to launch a second KLPS-4 survey in 2018, called the KLPS-4 I module, that will collect detailed information on a broader set of outcomes. We plan to register a separate pre-analysis plan for that data in 2018.

1. Introduction

1.1. Summary

Estimating the returns to childhood investments is of central importance in development and labor economics, and there is growing recognition of the long-run importance of childhood health and education interventions. Yet despite the importance of these issues, there are few studies that rigorously examine returns over the life-course, especially in Africa, primarily due to the dearth of longitudinal datasets that track youth into adulthood. This study builds on the work of Miguel and Kremer (2004) and Baird et al. (2016) to provide experimental evidence on the long-run returns to improved child health in Africa. In particular, this project analyzes the 20-year economic impacts of a school-based childhood deworming program in Kenya using outcome data from the most recent rounds of the Kenya Life Panel Survey, namely, KLPS-3, collected during 2011-2014, and KLPS-4, collected beginning in mid-2017 (and expected to finish in 2019).

1.2. Experimental Design and Previous Work

This section briefly describes the experimental design and results from analyses of earlier data collection efforts; for further details, see Miguel and Kremer (2004) and Baird et al. (2016).

Between 1998 and 2001, 75 primary schools containing nearly 30,000 children in a rural district of western Kenya were phased into a deworming treatment program known as the Primary School Deworming Program (PSDP). All children attending treatment schools received drugs twice per year to eliminate intestinal helminths. Schools were phased into the program over time, such that 25 schools were randomly selected to receive treatment starting in 1998, another 25 schools were randomly selected to receive treatment starting in 1999, and the final 25 schools began receiving treatment in 2001.

Previous work analyzed the near-term and 10-year impacts of this program. Miguel and Kremer (2004) find substantial impacts on the school attendance of treated children within 1-2 years of program launch, as well as impacts on children attending schools nearby.² In subsequent

² These results were confirmed in Miguel and Kremer (2014), which utilizes updated data and corrects coding errors in the original analysis.

work, Baird et al. (2016) exploit the second round of a longitudinal dataset known as the Kenya Life Panel Survey (KLPS-2), which tracked a representative subset of 7,500 children with an effective tracking rate of 82.5%, in order to study the impacts of improved child health 10 years after the launch of the PSDP. The authors find evidence of increased labor supply among men and education among women, with accompanying shifts in labor market specialization, and increases in meals consumed, as well as wage earnings.

The third round of the KLPS was collected during 2011-2014. KLPS-3 attempted to locate the same representative subset of 7,500 children from PSDP schools, and achieved an effective tracking rate of 87.3%. The current data collection round, KLPS-4, seeks to locate this same sample of individuals. Data collection for the KLPS-4 E+ survey module focused on economic outcomes is currently underway, and we intend to launch an additional survey as part of the KLPS-4 round, the I module, in 2018 to collect information on a wider range of outcomes, including measures related to individual health, migration, fertility, and parenting.

1.3. Data Examined to Date

Data collection for the fourth round of the KLPS (KLPS-4) began in mid-2017. On September 1, 2017, the research team registered a data management memo on the AEA registry, to outline who would have access to the KLPS-4 E+ data collected prior to the registration of this pre-analysis plan. This data management memo specified that all KLPS-4 E+ data collected prior to the registration of this plan would be compiled, organized, and stored by the Busia-based field research associate, Eric Ochieng. Thus far, Eric has provided the individuals writing this pre-analysis plan with only summary statistics on survey data quality and respondent tracking rates, which have been used to maintain high data quality and reduce attrition. Eric has not had any input into this pre-analysis plan, which was developed and reviewed only by researchers on the project who have not accessed the data in any way beyond these data collection summary statistics. Access to the KLPS-4 E+ data will only be provided to research team members after this pre-analysis plan is filed on the AEA RCT Registry.

This document lays out the specific analyses we intend to conduct for the 20-year deworming impacts evaluation along the five pre-specified outcome domains mentioned above. This plan captures our current thinking about analysis with this data within these domains but we anticipate carrying out some additional analyses beyond those included in this plan, so this

document is not meant to be comprehensive nor to preclude additional analysis. We plan to register an additional pre-analysis plan in 2018 relevant to the KLPS-4 I module data, which we intend to begin collecting in 2018.

2. Analysis

2.1. General Notes

The analysis specified in this document is based on Baird et al. (2016) and builds on it in two important ways. First, the analysis will utilize the latest rounds of data (KLPS-3 and KLPS-4), which include enhanced measures of consumption, agricultural productivity, and total household earnings. Second, with these additional round of data, we will be able to conduct panel analysis, both by pooling data across rounds, and examining the evolution of outcomes over time.

This pre-analysis plan discusses the methodological approaches that will be used in the analysis, and outlines the five domains of outcomes on which the analysis will focus. The KLPS-4 E+ survey instrument and the KLPS-3 (I and E+) survey instrument are included in the appendix to this document for reference.

2.2. Sample for analysis

As described above, the KLPS sample includes a representative subset of approximately 7,500 individuals who participated in the original PSDP. Approximately 1,500 of these individuals additionally took part in a vocational training voucher and cash grant program which launched in early 2009, prior to the start of the KLPS-3 and KLPS-4 data collection rounds. Approximately three quarters (1,070) of these individuals were randomly selected to receive either vocational training vouchers or cash grants (or both). In order to focus the present analysis on the impacts of the deworming treatment intervention, and not confuse findings with these other interventions, these 1,070 individuals will be dropped from the deworming analysis sample when using the KLPS-3 and KLPS-4 data. Because the voucher and grant winners and non-winners were selected randomly, the analysis will adjust the survey weights for individuals in the non-winner comparison group in order to maintain initial (baseline PSDP) population representativeness. This sample adjustment was not made in Baird et al. (2016), which focused

on data collected prior to the launch of the vocational training voucher and cash grant interventions.³

2.3. Econometric Approach

The econometric approach we will utilize takes two main forms: Approach 1, cross-sectional analysis of the KLPS-4 data, and Approach 2, pooled regressions using data from KLPS-2, KLPS-3, and KLPS-4, on the subset of outcomes for which longitudinal data is available.

In Approach 1, the analysis will be based on the cross-sectional methodology in Baird et al. (2016), but now focusing on a richer set of outcomes that utilize the 12 months of retrospective data preceding the interview.⁴ The analysis will also present results utilizing data on the last month only, for comparability with Baird et al. (2016).

In Approach 2, the analysis will pool the last 12 months of retrospective data from each survey round, KLPS-2, KLPS-3, and KLPS-4, in order to better exploit the full data set and thus achieve more statistically precise estimates.

There is a difference in interpretation of results from the two approaches. The results of Approach 1 yield the average impact of deworming on outcomes roughly 20 years after a child treatment program began. The results of Approach 2 yield the average impact of deworming on outcomes between roughly 10 to 20 years after a child treatment program began.

A third approach is the analogue of the cross-sectional analysis in Approach 1 carried out separately for each of the three survey rounds. This analysis will allow us to assess the evolution of treatment effects over time. This is not the main statistical analysis but will provide useful information – for instance, on either the persistence or diminution of effects over time – that the research team will relate to underlying theoretical frameworks. The persistence of effects will be a critical input into cost effectiveness calculations along the lines of Miguel and Kremer (2004) and Baird et al. (2016), which we also intend to carry out using the full KLPS data set.

³ Note that in the discussion of panel analysis which follows, vocational training voucher and cash grant winners are dropped from analysis of the KLPS-3 and KLPS-4 data, but they will not be dropped from analysis of the KLPS-2 data, as KLPS-2 data collection occurred prior to the launch of these programs, as noted above.

⁴ Baird et al. (2016) focused on labor market outcomes measured over the “last month” prior to the survey interview, rather than over the last 12 months.

Following Baird et al. (2016), the cross-sectional approach (Approach 1, denoted with superscript 1) will estimate the 20-year impacts of deworming on outcomes using the following equation:

$$Y_{ij} = \alpha^{(1)} + \lambda_1^{(1)}T_j + \lambda_2^{(1)}C_j + \lambda_3^{(1)}P_j + X'_{\{ij,0\}}\beta^{(1)} + \varepsilon_{ij}^{(1)} \quad (1)$$

where Y_{ij} is the outcome Y for individual i in school j , $T_j \in \{0,1\}$ is the assigned deworming program treatment status of the individual's primary school (defined as in Baird et al. 2016), $C_j \in [0,1]$ is an indicator for whether the school was designated as “cost sharing” in later years of the PSDP⁵, $P_j \in [0,1]$ is the treatment saturation proportion among neighboring schools within 6 km during the PSDP (explained in more detail in Baird et al. 2016), $X_{\{ij,0\}}$ is a set of individual and school covariates, and ε_{ij} is the error term clustered at the school level.

As in Baird et al. (2016), the covariates include a series of baseline school characteristics (average test score, school population size, number of primary school students within 6 km, and an indicator for the administrative zone of school,) as well as baseline individual characteristics (indicators for gender and grade at the launch of the PSDP), and indicators for the month and wave of KLPS-4 survey. We will additionally include an indicator variable denoting individuals in the vocational training voucher and cash grant control group (who are included in the sample). All regressions will be Ordinary Least Squares unless specified otherwise, and estimates will be weighted to maintain representativeness with the baseline PSDP population, taking into account the sampling for inclusion in the KLPS, the two-stage KLPS tracking methodology, and inclusion in the vocational training voucher and cash grant program. We will present results for the full sample for all outcomes, although for several outcomes (such as earnings and consumption outcomes) we will focus primarily on trimmed samples (described in more detail below). Finally, the analysis will be conducted on the entire sample, as well as broken out by gender.⁶

The main hypothesis test will be a two-sided t-test on the significance of λ_1 , the coefficient on the Treatment indicator T_j , against a null hypothesis of $\lambda_1 = 0$. The secondary hypothesis test will be a F-test on the joint significance of the coefficients on T_j , C_j , and P_j

⁵ See Baird et al. (2016) for a description of this cost-sharing experiment.

⁶ Note that in Baird et al. (2016) we additionally examined results by age (above and below median age). That analysis, which used the KLPS-2 data, was interesting because many individuals below median baseline age were still in school at the time of data collection. However, by KLPS-3 and KLPS-4, we no longer expect that many respondents will still be in school, making an age analysis less important.

(λ_1 , λ_2 , and λ_3 , respectively), against the null hypothesis that all three coefficients are jointly equal to zero.

Approach 2 (denoted by superscript 2 in equation 2 below), the panel approach, exploits the fact that the Kenya Life Panel Survey Rounds 2 (KLPS-2, collected during 2007-2009), 3 (KLPS-3, collected during 2011-2014), and 4 (KLPS-4, expected to be collected during 2017-2019) allow for the observation of important economic and other outcomes over time. In particular, the main specification will be:

$$Y_{ijt} = \alpha^{(2)} + \lambda_1^{(2)} T_j + \lambda_2^{(2)} C_j + \lambda_3^{(2)} P_j + X'_{\{i,j,0\}} \beta^{(2)} + \gamma_t + \varepsilon_{ijt}^{(2)} \quad (2)$$

where all terms are defined as in equation (1) above but now with a time (t) subscript, and γ_t are year fixed effects. The level of observation will be the individual-round. The same hypothesis tests will be carried out as described for Approach 1 above. Weighting and trimming will be as described in Approach 1. Finally, as with the cross-sectional approach, the panel analysis will also examine the heterogeneous effects of the treatment across gender.

2.4. Multiple Testing Adjustment

For the main coefficient estimate of interest (λ_1 in equations 1 and 2 above), the analysis will present two sets of p-values. The first is standard “per comparison” p-values. These are appropriate for a researcher with an *a priori* interest in a specific outcome. For instance, researchers interested in the impact of deworming treatment on self-employment profits should focus directly on this p-value.

Second, the analysis will also present additional p-values that account for multiple testing. Since the analysis tests multiple hypotheses within each family of outcomes, it is appropriate to control for the possibility that some true null hypotheses will be falsely rejected. Within each of the five pre-specified groups of outcomes, the analysis will compute the False Discovery Rate (FDR) adjusted q-values (analogue to the standard p-value) that control the expected proportion of rejections that are Type I errors. Specifically, the analysis will follow the approach adopted in Anderson et al (2008) and Casey *et al.* (2012), and the references cited therein. The analysis will carry out multiple testing adjustments within each family of outcomes (including Families 3A and 3B as separate groupings), and present the associated q-values.

The analysis will additionally carry out a separate multiple testing adjustment across the two outcome measures that have been identified as key primary outcomes for the overall analysis;

these are total per-capita consumption in the last 12 months from Family 1, and total respondent earnings in the last 12 months from Family 3A (see details below).

2.5. Analysis One: Living Standards Measurement

The first set of analyses uses the same cross-sectional estimation framework as Baird et al. (2016), but focuses on the improved living standards and welfare measures collected during KLPS-4. KLPS-4 collects a detailed set of data on household consumption expenditures for over 200 product groups across the entire KLPS sample, allowing for a comprehensive measure of per capita consumption, the preferred measure of welfare in low-income settings where own production (including of agricultural products) is common (Grosh and Glewwe, 2000). Following the standard approach, household expenditures will be adjusted for urban-rural price level differences using information from price surveys that were collected contemporaneously at various local markets (in western Kenya as well as in the major urban areas of Nairobi and Mombasa). The analysis will present measures of annual total consumption per capita and annual food consumption per capita, in addition to measures of household asset ownership and tax expenditure.

2.5.1 Family 1: Household Consumption

The KLPS-4 survey instrument includes detailed information on household purchases in the last 12 months or purchases in a typical month (of the last 12 months) for all goods, and for most items, the value of gifts or barter that the household received of each item. For frequent and non-frequent non-food purchases, the survey further collects information on purchases in the last 7 days. For food items, the survey asks for the typical value of consumption of the household's own production during the months in which it consumed its own produced goods.

We will use this information to create a measure of the value of overall household consumption over the 12 months preceding the survey, summing purchases, gifts, barter, and home production measures for all goods.⁷ Dividing by the number of household members gives per capita consumption within the sample. In addition to total consumption, food consumption and non-food consumption will be analyzed as separate outcomes.

⁷ Where there is information on purchases of the same item over different lengths of time, we will average the 12-month conversions to create a measure of average purchases in the past 12 months.

We will trim the top 1% of observations of all consumption measures. Furthermore, consumption measures will be converted to 2017 U.S. dollars at purchasing power parity (PPP). The measures will first be converted from KSH to US dollars at PPP using the average exchange rate by wave, and then converted to 2017 dollars.

The KLPS-3 survey collected consumption expenditures for over 150 product groups, a subset of the KLPS-4 product groups. This data was collected among a random subset of the full KLPS sample, for approximately 800 individuals in the KLPS-3 E+ module. The consumption data from KLPS-3 and KLPS-4 will be used in a panel analysis to observe consumption effects over time.

The KLPS-4 consumption analysis will additionally include a measure of the number of meals eaten by respondents per day, using the mean number of meals eaten yesterday, two days preceding the survey, and three days preceding the survey. Previous rounds collected data on the number of meals eaten yesterday, allowing for a panel analysis of that outcome.

Lastly, the KLPS-4 consumption analysis will include a measure of taxes paid by the household in the last 12 months, including household spending on local taxes and fees and community group fees, and payments to government officials by the household. This analysis will be presented with the top 1% of observations trimmed in the main specification, as well as for the full sample. Note that this measure does not include income and self-employment profit taxes paid by individual household members, and thus will undercount the true value of taxes paid by the household. A more comprehensive measure is included in Table 3B below. The findings in Baird et al. (2016) suggest that deworming may generate more in future tax revenue than it costs upfront, and the data on total tax payments in the proposed analysis will provide evidence on this issue.

Table 1, below, includes further detail on the construction of outcomes in this family.

2.5.2. Family 2: Household Wealth

The second family of outcomes in Analysis One (Living Standards Measurement) will include measures of household wealth (Table 2). The main measure of household wealth will be the sum of the value of durable assets and livestock. The durable asset ownership measure will be constructed by estimating the value of all major durable goods owned by each household (KLPS-4 E+ Module, Section 7), and the livestock ownership measure will be constructed using

the information collection in KLPS-4 E+ Module Section 6. All of these outcomes will be trimmed, dropping the top 1%. Table 2, below, includes further detail.

A preferred measure of household wealth would further value savings, as well as house and land ownership. The KLPS-4 E+ Module does not collect information on the total stock of savings, so we will not be able to include this in the summary wealth measure. However, KLPS-4 E+ Section 5 does collect information on the value of housing and land, both owned and rented. Because we only collect information on the monthly rental value of each, we will need to make some assumptions in order to include these in an overall measure of household wealth, but we do intend to include such an outcome in our analysis.

2.6. Analysis Two: Earnings, Labor, and Occupational Choice

The second set of analyses focuses on earnings, labor, and occupational choice (see Tables 3, 4, and 5, below). This set of analyses will employ both the cross-sectional approach in equation (1) (for all outcomes) and the panel data approach in equation (2) (for the subset of outcomes for which longitudinal data is available).

2.6.1 Family 3A: Individual Earnings

Wage earnings, self-employment profits, and agricultural profits will be examined separately as outcome variables, in both cross-sectional and pooled regressions. As detailed wage earnings and self-employment profits information were collected in KLPS-2, KLPS-3, and KLPS-4, both Approach 1 and Approach 2 will be used to explore impacts of the treatment on these outcomes.

KLPS-3 and KLPS-4 include more detailed measures of agricultural production than KLPS-2; the information collected in KLPS-2 is insufficient to reliably construct agricultural profits. Individual agricultural profit for KLPS-3 will be measured as the sum of all crop-specific production (valued in cash) minus input costs, for farming activities for which the respondent provided all reported household labor hours and was the main decision-maker. The input cost is calculated as the sum of the salaries for workers from outside the household and the amount spent on tools and machinery. Individual agricultural profit for KLPS-4 will include the net profit generated from non-crop and crop farming activities for which the respondent provided all reported household labor hours and was the main decision-maker. This is the value of everything

produced, minus expenses for the activity including hired workers, land rental, storage, and purchase of inputs, such as raw materials, fuel, and electricity. The analysis will use these two agricultural profit measures for KLPS-3 and KLPS-4, respectively, in the pooled panel analysis. The focus on activities carried out solely by the respondent is important in allowing us to create individual productivity measures in agriculture conceptually analogous to those in wage work or non-agricultural self-employment.

In addition to examining wage employment earnings, self-employment profits, and agricultural profit separately, the analysis will also sum wage employment earnings, self-employment profit, and agricultural profit to get a measure of total individual earnings. This will be the main measure of individual earnings (full sample, dropping the top 1% of earners). The analysis will examine both the full sample with non-earners treated as zero, and a specification with log total earnings as the dependent variable (which effectively drops the non-earners). All measures will additionally be calculated in hourly terms, using reported work hours.

As highlighted in the econometric section above, Approach 1 will include cross-sectional analysis of KLPS-4 results, and Approach 2 will pool together KLPS-2, KLPS-3, and KLPS-4 in unbalanced panel analysis at the individual-round level of observation, with year fixed effects. Table 3A provides more detail on how these variables are constructed.

The analysis will additionally include a measure of individual taxes paid from wage employment and self-employment. The survey collects data on licenses and taxes and payments to government officials for a respondent's own business, as well as taxes deducted from salary for current employment and employment history. These data will be aggregated to determine taxes spent on earnings-related activities by the respondent. This measure is an input to the total tax spending measure described in Family 3B below.

2.6.2 Family 3B: Total Household Earnings

KLPS-4 further allows for the measurement of wage earnings and self-employment profits for other household members. Total household agricultural profit is defined as the net profit generated from non-crop and crop farming activities for which any household member (not just the KLPS respondent) was the main decision-maker. Total household self-employment profits will be the sum of individual self-employment profits and self-employment profits of other household members (KLPS-4 E+ Module, Section 15.4). Total household wage

employment earnings will be the sum of respondent wage employment earnings and wage employment earnings of other household members (KLPS-4 E+ Module, Section 15.4). Total household earnings will then be computed as the sum of total household wage earnings, total household self-employment profits, and total household agricultural profits.

KLPS-4 cross-sectional regressions using total household earnings as an outcome variable will be estimated (full sample, dropping the top 1% of earners). Table 3B provides further detail on variable construction.

The KLPS-4 analysis will additionally include a measure of total taxes paid in the last 12 months, including household spending on local taxes and fees and community group fees, and payments to government officials by the household, as well as the respondent wage and self-employment taxes described above. This analysis will be presented with the top 1% of observations trimmed in the main specification, as well as for the full sample. This is the most comprehensive measure of household tax payments presented. Table 3B provides further details.

2.6.3 Family 4: Labor Supply

The effects of deworming on labor supply, as measured by hours worked will also be examined. First, measures of wage employment hours, self-employment hours, and agricultural employment hours will be separately calculated. Second, total individual labor supply will be constructed as a sum of hours worked in all three sectors (weekly hours worked times 52 and divided by 12, to get a measure of monthly hours). This will be the main measure of labor supply in the analysis. Finally, indicators for positive hours worked in any sector, and within wage- and self-employment only, will also be constructed. The analysis will present estimates for the full sample. See Table 4 for construction details.

2.6.4 Family 5: Occupational Choice

Finally, estimates will also estimate impacts on occupational choice as a result of deworming. Following the analysis performed in Baird et al. (2016), seven binary indicators for occupational choice will be included as outcome variables: employment in agricultural sector, employment in fishing sector, employment in manufacturing sector, employment in construction/casual labor sector, employment in services sector, employment in retail and wholesale trade sector, and employment in trade contractor sector.

Table 5 provides further detail on variable construction. Again, regressions will be calculated using (1) the KLPS-4 cross section only and (2) KLPS-2, KLPS-3, and KLPS-4 data for unbalanced panel data analysis at the individual-round level.

SECTION 12. Transfers

Read: Now, I would like to ask you about relationships in which your household either receives or gives money or goods. By your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

If FR is in boarding school, read: We consider boarding school students to be a 1-person household, therefore classmates and parents should not be included as part of your household.

If FR is a live-in guard or live-in house help, read: We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

Please probe well on this next question. We want ALL transfers, not just gifts.

1. Did anyone in this household receive a gift / assistance of money or goods from someone outside the household in the last 12 months?

If MORE THAN 3 SENDING TRANSFER RELATIONSHIPS, ask question 17. If not, skip to question 19.

17. How many total individuals did you send money to in the last 12 months? **Note that we want the total number of transfer relationships here, not the number of people (i.e., if the FR sent money to an aunt and uncle who live together in the same household, that counts as 1 relationship rather than 2 relationships).** |____| individuals

18. What is the total amount (including all cash transfers and the total value of transferred goods) that your household sent to persons outside the household during the past 12 months, including the transfers above as well as any other transfers?
Amount: |____| Currency if NOT Ksh (**use G12 codes**) |____| Other: _____

19. How many additional friends or relatives asked you for money in the last 12 months, that you did NOT send money to? |____| individuals

SECTION 6. Livestock

Read: Now I would like to talk to you about things your household owns and things your household has recently purchased. I would like you to consider ownership and expenditures by your household as a whole, not just by you. If you need help answering any of these questions I will be asking about household spending, we can ask anyone else from your household here to help us.

- **If FR is NOT in boarding school, a live-in guard, or live-in house help, read:** Recall that, by your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.
- **If FR is in boarding school, read:** We consider boarding school students to be a 1-person household, therefore classmates should not be included as part of your household.
- **If FR is a live-in guard or live-in house help, read:** We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should NOT be considered part of your household. Spouses or dependents living elsewhere should also NOT be considered part of your household.

Note: We will use this household definition for the remainder of this survey.

Read: First let’s talk about animals. **Note:** We are interested in livestock this household owns, plus any livestock the respondent owns that is at another location.

Record all amounts in this section in one currency, preferably Kenyan shillings.

Prompt: Are there any other adults (other than yourself) in your household who “eat from the same pot” and spend 4 nights or more in an average week sleeping in your home whom you have not listed? **Confirm that the number of rows completed in the table matches the number of adults entered in question 2 before continuing to the next question.**

SECTION 7.1. Sentence Reading

Read: For this part of the survey, I am going to ask you to answer some questions about reading and arithmetic. **Show the FR the example sentences on the exam.**

Read: This paper has a list of sentences. Some of the statements are TRUE and some are FALSE. You are required to read them as fast as possible. If the statement is TRUE, mark (✓) inside the box. If the sentence is FALSE, mark (X) inside the box.

Read: Let's work on an example together. Please read the first statement.

Example: Pupils will read the first statement, which is TRUE. Then the investigator will show that the mark (✓) should be put for TRUE sentences. Pupils will read the second sentence, which is FALSE. The investigator will show that the mark (X) should be put for FALSE sentences. Pupils will read the third FALSE statement. They will be asked which mark is to be indicated inside the box (X). Pupils will read the fourth TRUE sentence. They will be asked which mark is to be indicated inside the box (✓).

Make sure FR understands the exercise before proceeding.

Read: This exercise will be timed. You will have 4 minutes to complete as many sentences as you can. We do not expect you to finish all of them, so do not feel upset if you do not complete the exercise. Are you ready to begin?

1. **Do not ask the following question. Simply record your impressions.** Does the FR refuse to participate in the sentence reading test? (1=Yes, 2=No) |___|

If NO, skip to "TEST INSTRUCTIONS". If YES, continue.

1a. **Do not ask the following question, simply record your impressions.** Why does FR refuse to participate in the test?

Now fill out the "Survey Refusal Sheet" and skip to Section 7.2.

TEST INSTRUCTIONS: Fill out box on the first (introductory) page of the "Sentence Reading" exam. Then, give test to FR and start timer. When timer goes off, collect test from FR and place in manila envelope of information to enter back at office.

2. **Do not ask the following questions. Simply record your impressions.** Was there any disturbance during the performance of the test? **Include presence of other people or if test takes place in a noisy area.** (1= Yes, 2= No) |___|

2a. **If YES:** Describe disturbance. _____

SECTION 7.2. Arithmetic

Read: This is a mathematics test that I would like you to undertake. The test consists of addition, subtraction, multiplication and division questions.

Make sure FR understands the exercise.

Read: I would like you to attempt all questions starting with the addition questions. If you cannot answer a question, leave it and continue with the following question. You will have 10 minutes to complete as many questions as you can. We do not expect you to finish all of them, so do not feel upset if you do not complete the entire sheet. Are you ready to begin?

1. **Do not ask the following question, simply record your impressions.** Does the FR refuse to participate in the arithmetic test? (1=Yes, 2=No) ☐

If NO, skip to TEST INSTRUCTIONS. If YES, continue.

1a. **Do not ask the following question, simply record your impressions.** Why does FR refuse to participate in the test?

Now fill out the “Survey Refusal Sheet” and skip to Section 7.3.

TEST INSTRUCTIONS: Fill out box on the first (introductory) page of the “Math Test”. Then, give test to FR and start timer. When timer goes off, collect test from FR and place in manila envelope of information to enter back at office.

2. **While the respondent is taking the Math Test, this may be a good time to take a GPS reading outside. Do not ask the following questions, simply record your impressions.**

2a. Is this interview being performed at the respondent’s current residence, place of work, or school? (1=Yes, 2=No) ☐

If YES, continue. If NO, skip to question 3.

SECTION 8.1. Schooling History

A. **Do not ask the following question to the FR.** What was the last year we interviewed this respondent? ***This information can be found in the OTHER INFO section of the TRACKING SHEET.*** |_|_|_|_| (YYYY)

Collect information on every year starting with the last year this respondent was surveyed (question A). Include ALL schooling in this table, whether primary, secondary, college or bible school, vocational training, or university.

	1. Were you attending school at any time during [year]? (1=Yes, 2=No) If YES, continue across row. If NO, go to next row. If a row is skipped because we have data on that year from a previous survey round, enter "88" and leave rest of row blank.	2. What school did you attend in [year]? Write name of school. If more than one, take school where pupil completed the highest level of education that year. If same as previous row, write "444", and skip to question 5.	3. School ID? Use E1 codes	4. Is this school public or private? (1=Private, 2=Public)	5. Did you attend school for the full year? (1=Yes, full yr, 2=No, partial yr) Note: want full "school year" here, whatever that may be (ie, for many it is ~9 months, but may be less for others) For current year, write "1" if still in school.	6. If NO: Why not? Use E2 codes	7. What type of school is this? 1=Primary school 2=Secondary school 3=College 4=Bible / Qur'an school 5=Vocational training 6=University 7=Other (specify) If 1 or 2, continue to question 8. If 3, 5, 6, or 7 skip to question 11. If 4, skip to question 11b.

SECTION 11.2. Ambiguity Question

Read: Imagine you are going to play a game where you draw a ball out of a bag without looking. We have two bags, with 10 balls each.

If response is “always”, number should be “88”. If DK, number and unit should be “99”. If the FR is in boarding school, ask them to consider how long they will live where they are currently staying for boarding school. For FRs who are live-in house help or live-in guards, ask them how long they will remain living at their employer’s home.

Read: Now, I would like to ask you about relationships in which your household either receives or gives money or goods.

Please probe well on this next question. We want ALL transfers, not just gifts.

FRs who work as live-in house help or live-guards are also a 1-person household, unless their spouse or dependent is living with them at their employer’s home. For spouses/dependents of the FR that are living elsewhere (not at workplace of FR), any gifts sent to the FR should be counted as transfers.

Read: As we mentioned before, one purpose of this survey is to understand how people in Kenya grow up and change in all the many aspects of their lives as they become adults. One of these aspects is health, and so now I would like to test you for anemia by measuring your hemoglobin level.

I have been trained by laboratory technicians at the **[insert name of training site]** to perform this test. I will take a drop of blood from a finger and test this blood in a HemoCue machine. The test uses disposable sterile instruments that are clean and completely safe. When I prick your finger to get a few drops of blood, you will feel it. Some people fear it very much, but pricking a finger is a common procedure that is done even with small children. The pain is very minor. The blood will be tested with the new equipment and, if you decide you want to know the result of the test, it will be given to you immediately. The pricking takes less than one second.

You will receive no additional assistance as a direct result of participating in this testing, although if we find out that you have severe anemia, you will be referred to a local health centre. As with the information you have already given me, the results of this test will remain as confidential as possible, and will not be shared with anyone but you. Any information that identifies you will be separated from your test results, so that only our researchers will be able to track your result back to you. We will never identify you in any report.

8a. Do you agree to participate in the anemia testing? **Write your name to indicate respondent's acceptance:** _____

If FR consents, continue to 8b. If NO: DO NOT ASK ALOUD. Record the reason why you were unable to conduct the HB test on the respondent:

If FR wants to know, tell them their level. If their level is in the "severely anemic" range, direct them to visit a local health center. If they have consented to receive their Hb level, write this on the respondent card along with the other anthropometric information.

SECTION 6. Sexual Behavior Questionnaire

Read: This section of the survey covers topics related to sexual behavior. These topics include your past and current sexual partners, HIV and other sexually transmitted infections, and the use of contraceptives to avoid pregnancy.

As we mentioned before, one purpose of this survey is to understand how people in Kenya grow up and change in all the many aspects of their lives as they become adults. One of these aspects is health. Because HIV and other sexually transmitted infections are important health issues in Kenya, we would like to ask you some questions about this topic.

To ensure your privacy and confidentiality in responding to these very personal questions, I will have you read and answer the sexual behavior questions, which are available in both English and Kiswahili, to yourself. You will have to mark the boxes that are correct on the answer sheet. When you finish filling out the question sheet, you will fold it and place it in a sealed envelope.

If you would prefer, I can also read the questions aloud. If you choose to read the questions silently yourself, I am available to clarify anything you don't understand.

Please answer accurately and do not worry about whether there is a correct answer. Your answers will have no effect on your personal life. As I mentioned, this information is confidential, only the researchers can access the data. Thank you for your cooperation.

1. Will you answer these questions? (1=Yes, 2=No) ☐

If YES, hand FR the questionnaire to fill out and skip to question 2. If NO, continue.

1a. ***Do not ask the following question, simply record your impressions.*** Why does FR refuse to fill out the questionnaire? _____

5 MINUTE BREAK AFTER THIS SECTION.

REMEMBER TO PLACE THE COMPLETED SECTION IN A SEALED ENVELOPE AND FOLLOW ALL APPROPRIATE PROTOCOL TO MAINTAIN CONFIDENTIALITY AND COMPLY WITH HUMAN SUBJECT RULES.

For the following sections 7 – 13, you may want to consult other household members and ask them to join the interview.

SECTION 7. Transfers

By your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

If FR is in boarding school, read: We consider boarding school students to be a 1-person household, therefore classmates and parents should not be included as part of your household.

If FR is a live-in guard or live-in house help, read: We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

Please probe well on this next question. We want ALL transfers, not just gifts.

1. Did anyone in this household receive a gift / assistance of money or goods from someone outside the household in the last 12 months? **Do not include transfers from the government or employers; also do not include loans or interest payments, or goods that the household purchased. 16. Have you ever received a transfer from this person in the past? (1=Yes, 2=No)	_	_	_	_

If ANOTHER TRANSFER was entered, return to question 12 and fill in the next column. If NOT, continue.

If MORE THAN 4 SENDING TRANSFER RELATIONSHIPS, ask question 17. If not, skip to question 19.

17. How many total individuals did you send money to in the last 12 months? **Note that we want the total number of transfer relationships here, not the number of people (i.e., if the FR sent money to an aunt and uncle who live together in the same household, that counts as 1 relationship rather than 2 relationships).** |_| individuals

18. What is the total amount (including all cash transfers and the total value of transferred goods) that your household sent to persons outside the household during the past 12 months, including the transfers above as well as any other transfers?
Amount: |_|_|_| Currency if NOT Ksh (**use G12 codes**) |_| Other: _____

19. How many additional friends or relatives asked you for money in the last 12 months, that you did NOT send money to? |_| individuals

SECTION 8. Economic Activities

Note: We are interested in livestock this household owns, plus any livestock the respondent owns that is at another location.

Read: For the following questions on expenditures, I would like you to consider expenditures for your household as a whole. Recall that, by your household, I mean the place where you usually sleep, not necessarily your ancestral lands or family home. By the individuals in your household, I mean those who “eat from the same pot” and spend 4 nights or days (or more) in an average week sleeping in your home.

If FR is in boarding school, read: We consider boarding school students to be a 1-person household, therefore classmates should not be included as part of your household.

If FR is a live-in guard or live-in house help, read: We consider live-in house help and live-in guards to be a 1-person household, unless you have a spouse or dependent(s) living with you. Your employer or employer’s family should not be considered part of your household. Spouses or dependents living elsewhere should also not be considered part of your household.

Note that we will use this household definition for all of the questions in the remainder of this survey.

1. How many [LIVESTOCK] did your household purchase in the past 12 months? How much money in total did your household pay for those [LIVESTOCK]? **Ask each individually.**
